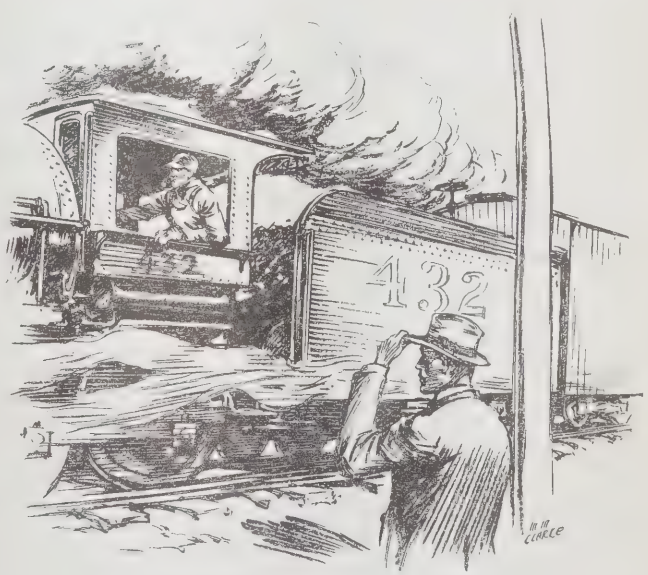
THE French are not so foolish as that. By ten o'clock in the morning the French begin loafing. That is the time they go out for their first cup of coffee. A Frenchman can get more enjoyment out of a small cup of coffee than an American can get out of four gallons of champagne. It isn't that the Frenchman cares so much about coffee. It is the companionship that goes with it that counts. The French drink their coffee at little tables on the sidewalks. The sidewalks are very wide and pedestrians have the use of only a half or a quarter of their width. There are big awnings to make the patrons feel a little more at home and about two cents a cup pays the bill.

From ten o'clock in the morning until as late at night as one cares to observe, one may see in Paris interested groups at these sidewalk places, deep in the discussion of whatever interests them. One group follows another. Some go back to work while others come out to talk. It is the Frenchman's way of living. He knows that of all the things in this world human beings are the most interesting. He is quite cognizant of the fact that



I have always wanted to run a locomotive.

The Strengthening *of* American Traditions

Through the revival of the
Old American Dances

THE methods of the world-famous Ford School of Dancing at Dearborn are made available to everyone in the unique manual of these fine Old American Dances, entitled:

'Good Morning'

Compiled by
Mr. and Mrs. Henry Ford.

This book gives complete information and instruction on each of these dances, style and deportment, and also explains how to arrange and conduct a successful Old American dancing party.

Printed in clear type and bound in flat-opening form

Price
75c

Piano Music (also suitable for violin) for 14 Old American Dances, 50c.

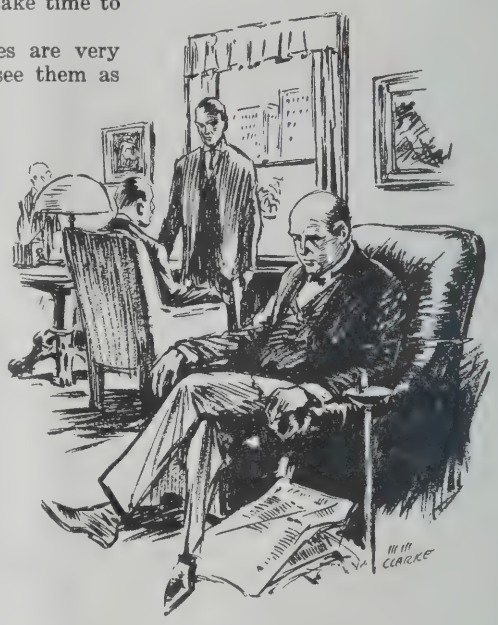
Orchestrations of 12 parts (including saxophone) can be supplied for 20 Old American Dances, at 25c for each dance.

Trade discount to schools, dancing instructors, music stores and orchestra leaders.

THE DEARBORN PUBLISHING COMPANY
Dearborn, Michigan

conversation is so important in every workable scheme for deriving happiness that it cannot be skimped without inviting serious consequences. We think conversation that has not in view the swelling of production figures is a waste of time. The French apparently think that production which has not in view a good deal of loafing during and following the work is time not spent in the best manner. In short, the French take time to live. We don't.

These differences are very real. Others can see them as well as we do. A French newspaperman who visited New York a few weeks ago went away with the feeling that he had had a very bad vacation. He had never seen anything like New York before and hoped never to see anything like it again. He said New York was the only city he had ever seen that screamed at him. Paris cooed, London hummed, but New York screamed. If he had run around a little more he would have heard screaming all over the continent. It is the way we live.



After fifty, boredom begins to set in harder and harder each year.

New York is not geared any higher than Detroit, Chicago, Kansas City or San Francisco. There is only more of it in New York. Every American is chained to his desk during business hours. If a Frenchman wears a chain it is so long that he does not mind it. Go to a Frenchman's office and more than likely you will find it locked. For four days I made daily calls at a Frenchman's office, only to learn when he appeared that he had been loafing at his little place in Normandy. He hadn't been taking a vacation. He had been working, as he understood the word. It was his way of living—working some and loafing some. While he was far removed from the monotonous routine of matters at his desk, and the necessity of seeing the same faces over and over again, he was communing with nature and injecting new energy into his nervous system.

For doing that sort of thing one would be fired promptly in America. Business could not go on. It costs so much to live that people could not afford to spare the time. But the cost of living is so high in Paris that the screams of the populace can be heard across the Atlantic. Still the people find time to loaf and business, such as it is, goes on.

We Americans are too busy to live. At least we think we are. What we call being busy is, it seems to me, partly a delusion and partly a bad habit. We think the heavens would fall if every year did not show a gain over the preceding one. Obviously this sort of thing cannot continue forever. There must come a time when the farthest up will have been reached. When that time comes the heavens will probably remain where they are. What harm if we assume that the time has come now and go out to get a cup of coffee or to drop in at a library and browse among books?

America is full of interesting people but for the most part they do not derive much benefit from one another. Not as much as they should, at any rate. Even if one is willing to loaf some of the time he can find no one to loaf with him. One cannot go visiting during business hours. It is not done. And there are no hours but business hours except at night.

I had a perfectly good idea last autumn of driving from New York to Gettysburg, thence down the Shenandoah Valley to Staunton, Virginia, and from there to Charlotteville, the home of Jefferson. I had a letter from a United States Senator to the president of the University of Virginia, which Jefferson founded, that would have given me an exceptionally good opportunity to see Monticello. All I needed was somebody to go with me—a good companion. I know many such in New York, but every one of them was so lashed to his work that a week off, even for such a trip as this, was not to be considered. When I go to Monticello I shall probably make the trip by train and have as bad a time as possible for the money.

I don't sigh for my youth, nor for my thirties or forties. I have lived through all of that once, and while I enjoyed it, I should rather go on to other things. In other words, I have known how to 'change with good grace in changing circumstances.' But I have not solved the problem of how to be happy in a world that is so busy no one can take time to talk about anything except business, and I am tired of doing the same things so many years. There are several other kinds of work at which I should like to try my hand. I should like to begin by running a freight train in the daytime and making programs for a broadcasting station at night. Perhaps the next season I should like to practise law. There are so many things in this world that should be interesting to do.

Interesting activities make living worth while. That is why a young couple, ambitious and intelligent, are more to be envied than the millionaire who retires and tries to fight off boredom with substitutes.

I should tremendously like to live my life over again, but I should like, even better, to go on with this life.

The first fifty years, of course, should be the hardest. The second half-century will be the best as soon as we think we have sufficient time to enjoy it. But there will have to be considerably more variety in our activities than there is according to the present mode of living. Too much of the same thing is a plenty.

The American Black Bear — A Much Abused Animal

By F. J. CLIFFORD

Drawings by
EDWARD McCANDLISH

[*Northwest News* Item—The huge black bear that has been killing sheep all summer has been destroyed at last by John Doe and his brother James, after a grilling chase with their trained bear hounds. There is no doubt that the bear was guilty of slaughtering the sheep, as its tracks were seen around all carcasses eaten.]

THE news report, which is typical of countless others, would lead one to think that the United States Biological Survey might be justified should it declare the bear a predatory animal, and order its extinction. However, it might be well to get a little direct evidence—first-hand information—on the interesting subject before we lend assistance to the contemplated slaughter.

First-hand is a phrase designated by Webster's as: 'obtained directly from producer.' Very well, we went to the producer. A fifty-mile motor run brought us to the little frontier town of Winthrop, in the upper Methow Valley. Two miles westward and we were at the broad acres of the Banker ranch. Senator Banker is the owner and operator; very much so, since we found him in worn overalls, as with shovel he guided water over fields of growing alfalfa.

'What do I think of the common bear being a predatory animal?' he answered to my query, after we had repaired to the coolness of his house in the shade of huge cottonwoods. 'My candid opinion is this: The kind of bear spoken of is a long way from being a predatory animal. Though omnivorous by nature, their main diet consists largely of berries, tender plants and green grass. I have many times seen them quietly grazing with our cattle in green mountain meadows. They did not molest the cattle and the stock seemed little afraid of them.

'Originally, their carnivorous propensities only carried them to the eating of small animals, insects, bugs or any carcasses they might find. Through changed conditions brought about by the last several years of unprecedented drought that has curtailed much of the bear's natural forage, the presence of dead sheep and occasional cattle that have died from wild-plant poisoning or accidentally, there are some of the big old blacks and browns that have undoubtedly turned killers.

'In the twenty-five years we have ranged cattle here, the bears have generally been very numerous. But we have never to our knowledge lost any by them until the spring of 1925 when a four-year-old cow of mine was killed by an old black bear, or it may have been some variety of grizzly. The hide and bones are at the rendezvous ranch up between the forks.

'We employed a local hunter, Jim Dodd, to watch the carcass. This is the only way

we know of to find out with any degree of certainty who the guilty party is. The first two visitors were two small inoffensive-looking bears. But they were soon chased away by a big black bear. To test ownership, Dodd stepped toward the carcass. The bear immediately showed fight so it was shot. By comparing claw and teeth marks, one tusk being gone, we were convinced that the right bear had been killed. As no other cattle have been killed since, we are quite positive of it.

'People who are not close observers, when finding bear feeding on carcasses, are often led to think they have discovered the real killer, when the reverse might be true. I certainly do not think common black or brown bears are predatory, neither do we have sufficient evidence at the present time to condemn them or warrant their extermination.'

It might be well to mention here that Senator Banker fathered a law whereby anyone in the state of Washington who finds a bear predatory can kill it without further ado.

Another man in the frontier town whose graying hair shows the passage of many winters is Roma Johnson, forest ranger during the summer months but hunter of coyotes and mountain lions through the wintertime. When asked if he considered the bear a predatory animal, he set aside the pack he was preparing for a trip into the smoky peaks as he answered, 'I've almost lived in the forests for the last twenty-five years. I know of no instance where the common black or brown bears have killed either sheep or cattle.

'I have watched them dig out groundhogs and other burrowing animals, and have seen them roll rocks and tear rotten logs apart in search of bugs and insects—have seen them frolic and play, doing the most crazy things like the clowns they are. I don't want to see them exterminated any more that I would the deer. They are quite as timid and I find them just as harmless. They are too noble an animal to be swept from the face of the earth.'

Beyond the ranger station lies the North Road. Traversing twelve miles of it we reached the Boswell ranch. It is the last farm in that direction. Henry Boswell has lived there many years, gradually clearing off the timber for the raising of crops. He has many furred and feathered visitors from the wooded mountains. Asked how much damage bears have done him, he answered, 'Practically none, that I know of. They are rather timid animals unless made bold by hunger. At such times they may become somewhat of a menace. I am not very much for or against them.'

Beyond his homestead winds a forest trail. It meanders along tumbling waters, around beetling cliffs, through virgin forests that lay as they have for hundreds of years—twelve miles of it brings us to a Government forest camp. It is headquarters for the trailbuilders. Beyond is nothing but a sea of mountains. The foreman at the camp is A. J. Rawley, weathered and gray, but able to out-walk and out-pack many a younger man.

'I'm not much interested either way,' he replied, in answer to my question concerning the bear. 'The bear is not much good for eating. I've tried to make a meal on bear meat at times but the more I

chewed on a mouthful the larger it got. The hide is valued mostly as a trophy. I don't think they do much harm nor can I see where they are of much value to us.'

Another man on our list is R. W. Wallace, of Spokane, one-time sheepman.

'Bears may kill sheep,' he said, 'but they have never killed any of mine that I know of, in all the years I ran my flocks in the mountains.'

In the mountain foothills north of where I live is the home of a broad-shouldered Dane. U. E. Fries is his name. He has farmed and run cattle in the neighboring mountains ever since the Government took this land from the Indians. 'The bear is no good,' he declared. 'The Biological Survey men will do the right thing in proclaiming the bear a predatory animal and ordering its extermination. The bear is predatory on birds or any defenseless animal. They are very much like hogs. They killed two cattle for me. I could tell it was they by their work. I have lived here for thirty-seven years, and yet fail to see where they are any good. In Norway it is a great honor to kill a bear at any time. They cannot understand why the animal should be protected here. I believe they should be exterminated as I cannot see where they are of any use to us.'

The last interview was with Billy Robinson, of Lost River. He is a close student of nature, prospector, ex-hunter and a trapper of predatory animals only. He used to trap bears but their evident timidity and general harmlessness so impressed him that he traps them no longer. He much prefers to watch their almost human antics. Once in a great while he manages to engage them in conversation, mostly one-sided, of course, as their answers generally consist of shuffling about or side glances from their small sharp eyes; or squatting down with mouths stretched into silly grins and red tongues lolling, they prick up stubby ears at his loquacious remarks.

'The common black or brown bear,' said this disciple of the outdoors, 'is not by nature a predatory animal. They have been known to kill young cattle or sheep when driven to it by hunger, and only then after becoming used to feeding on the innumerable carcasses of domestic animals that died from eating poisonous plants or were accidentally killed. Where actual killing is done, it will generally be found to be a mountain lion, timber wolf or coyote, depending on the size of the victim.

'I can see no reason for condemning bears as being predatory, and certainly do not want to see them exterminated.'

From many years of personal observation of bruin and his work, I am convinced that he is not by nature a killer, but a creature of circumstances. He is too much of a clown, too good-natured, too indolent, to be the villain pictured in news reports. Early in the spring of 1925 an excited rancher called to say that a bear or mountain lion or something had killed a cow on top of the mountain a few miles to the north. It was rather late in the evening, but I drove there and found a young heifer dead from plant poisoning. A quantity of hide and flesh was eaten from head to shoulder, evidently the work of dogs. No other marks were on it, which showed the young cow had not been killed by animals. Searching around with the aid of a flash light I found in the moist ground beneath the shoulder of the heifer the track of a large dog or timber wolf, as the toenail was plainly shown.

Some two weeks later a young calf was actually killed by some animal. It was reported as the work of a bear or possibly a mountain lion. Then two colts were found killed, and not long after that two yearlings.

A request was sent in for Government hunters. Dr. Glen R. Bach, leader of predatory animal control at Olympia, sent in two hunters, McMillan and Orr. We made a great circle over the top of the mountain, covering some twenty miles. No bear or lion tracks were found, but we did discover some tracks of a large dog or timber wolf and many coyotes. Later on a mountaineer told the hunters of seeing a large yellow dog followed by two coyotes. Still later a rancher reported seeing the dog with coyotes following. So it was pretty well established that it was a dog turned wild that had been doing the killing.

Housing an Army in Hovels

(*Continued from page 7*)

accrued to that department for propert transferred to other divisions of the Govern ment, all of which makes it increasingl difficult to account for the failure to exten necessary relief in the present emergency

General Pershing has said: 'There ca be no earthly justification for saving a fe million dollars a year on the army durin peace if, as a consequence, we must spen billions in an emergency in an attempt t make up deficiencies.

'There is a point below which we canno go without most serious results—*and we hav reached that point.*'

At Fort Benning, Georgia, both th 24th and the 29th Infantry, each a war strength regiment, have lived under canva winter and summer since 1919.

In Panama an army truck became un manageable; it struck one of the arm buildings in which were quartered sixt men. The building crumpled like a house o cards and the only two men who were in i at the time were severely injured. Durin the year 1924 the loss by fire in temporar quarters was well over $1,500,000. In 1925 at Fort Sill, 116 sets of officers' quarter were burned to the ground illustrating th enormous hazard to human life independen of the personal property belonging to th officers and men.

At Fort Benning there are stationed about 650 officers, yet the Governmen has provided permanent quarters for onl seventy. The balance are living in tempo rary quarters.

Experts have pointed out to the Militar Committee of the House that the appropria tion of $5,770,000 which Congress voted fo construction at the twenty army posts could be totally expended at either For Benning, Fort Sam Houston, Camp Lewis or any of a dozen other reservations tha could be mentioned. As a result of thes conditions training has been seriousl curtailed since the men must be utilized fo the labor of salvaging.

At Fort Bragg there is only one set o officers' quarters which may be classed a permanent, and conditions at the Infantr School at Fort Benning and the Tank Schoo at Fort Meade are a repetition of thos already stated; while the hospitals at For Monmouth, Camp Lewis, Fort Leaven worth and Schofield barracks were show by the Surgeon General to be totally unfi for hospital purposes.

At the Air stations at Selfridge, Mitche and Maxwell fields where the same condi tions prevail, the winters are both long an severe and it is with much difficulty an considerable fire-hazard that the quarter are kept even partially heated; while a France Field in the Canal Zone, the quarter are equally unsuited to the climate.

After protracted hearings at which all c these matters were explained to Congress i infinite detail, and at which the Secretar of War said, 'It is a great surprise to m when I go around to see that there is an morale at all.' The Regular Army is stil unsheltered.

'There is a point beyond which we can not go without most serious results—an we have reached that point.'

'We're 20 Days Ahead of the Market

That Means a New Car for You, Ethel'

THEY have settled on a farm of five or ten acres or more—the kind of farm being laid out to bring hundreds of good citizens to the virgin country immediately back of Venice, Florida.

They have forgotten biting frosts, gambling on crops and paying high prices for things they can't raise, and getting low prices for what they do raise.

Farmers, good industrious people, like these young folks, in the Florida counties of Manatee and Sarasota, have made $500 and more an acre a year without such aid as is now provided by the Venice Farm Board.

The Board sells at moderate prices, on liberal terms, farms of sound title, located on good roads, with land cleared and ready to plant, and main drainage available. Venice Farms are now being developed as one of the leading agricultural sections of the United States . . . Further, this board supplies information about marketing outlets and the crops favored by market conditions. So, in addition to taking good advantage of the productivity and fertility of the soil the Venice farmer can get in line for the highest prices in the early markets. Crops in this part of Florida are extremely early.

Two, three, four crops a year. Winter is a gentle summer. Work gets results—crops spring up under the liberal sun and ample rain. Venice farms have artesian wells as an added assurance. The living advantages are manifold—good roads, a fine city and the friendly Gulf.

So it is not a serious struggle to wring another automobile out of the soil. The farmer who applies real industry here can enjoy the best things of life amid the most livable conditions.

Solid authority for these statements is found in the fact that the city, industries and farms of Venice are backed by the Brotherhood of Locomotive Engineers which for more than sixty years has sought the improvement of working and living conditions.

Under the direction of the Venice Farm Board a booklet has been prepared faithfully describing and illustrating this opportunity. Read it to understand more fully the reasons why the most able type of farmers are visiting Venice Farms, and then locating here.

Venice Farm Facts

Located in the Manatee district, rated first in productivity in state.

Average maximum temperature 27 years 90.5°; average minimum 63.5°; average rainfall 48.97 inches annually.

315 to 345 growing days.

Venice Nursery and Experimental Farm propagating crops best suited to the soils.

Venice Marketing Bureau assists co-operative packing, shipping, selling.

Florida crop values have increased 130% in ten years—U. S. average only 9%.

Come to National Tarpon Tournament at Venice June 4th to 25th.

THE VENICE CO.

Owned by the Brotherhood of Locomotive Engineers

The facts in these advertisements, and the information and photographs in the booklet, 'A New Life of Independence,' are supplied by the Venice Farm Board and are based on close daily observation of local conditions. Send the coupon for the booklet.

THE VENICE COMPANY, 110 Venice Blvd., Venice, Florida.

I shall be pleased to receive a copy of the Venice Farm Board's booklet, 'A New Life of Independence,' describing in detail the working and living conditions on the Farms of Venice, Florida.

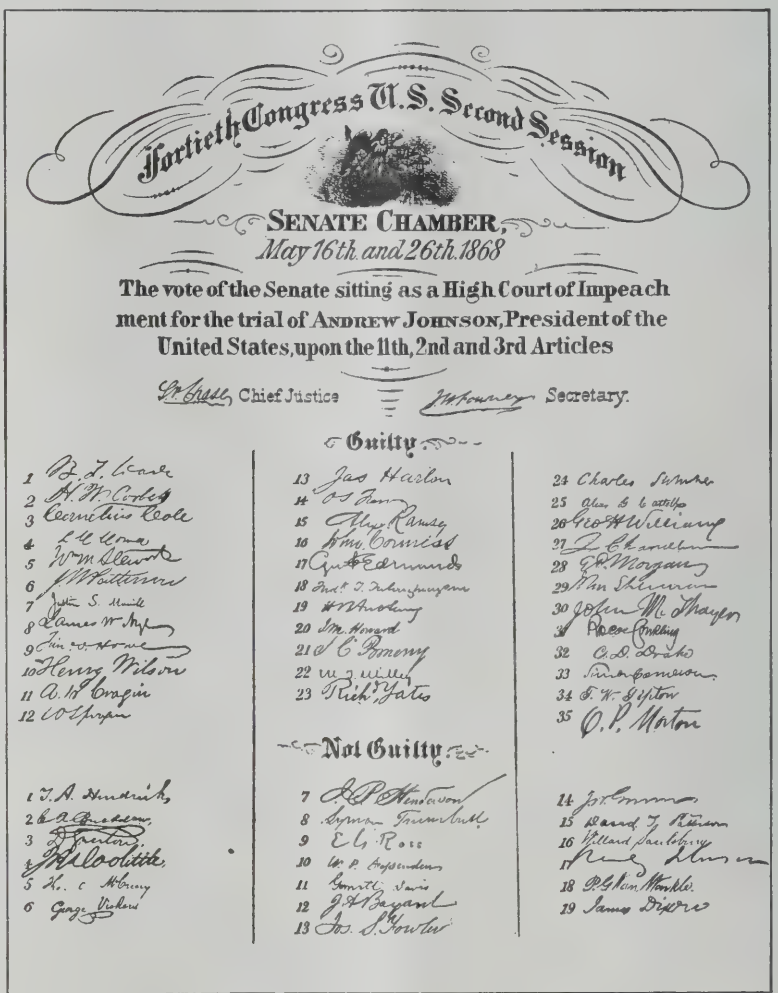
Clearing the Name of a President

(Continued from page 13)

several of the latter before them. Henderson paid no attention to the summons and it was clear that his vote was lost. This was true of all the recusant Senators but Ross, and on him the attack was again concentrated. He was threatened with an investigation on the charge of bribery, his utter ruin was predicted unless he voted for conviction, and enormous pressure of every sort was brought to bear upon him. By the time the Senate reassembled many radicals had come to believe that he had finally been won over.

The next vote was taken on the second article and again Ross voted 'Not Guilty.' Again the vote stood 35 to 19, and the President was acquitted. The third article was then voted upon with the same result. And then the farce ended. Adjournment without delay was moved and carried, and the Court of Impeachment adjourned without the managers daring to ask for a vote on the alleged chief crime for which the President had been impeached—the removal of Stanton. The President was acquitted by one vote, but those who impeached him and those who voted him guilty have never been acquitted. The trial not only prepared the way for the vindication of Andrew Johnson; it unsparingly condemned those who sought his downfall.

The seven recalcitrants were all retired to private life with the expiration of their terms. Most of them were never again in public life. Ross died in poverty and obscurity, having been literally hounded by his opponents.



Fortieth Congress U.S. Second Session
SENATE CHAMBER,
May 16th and 26th 1868
The vote of the Senate sitting as a High Court of Impeachment for the trial of Andrew Johnson, President of the United States, upon the 11th, 2nd and 3rd Articles
Chief Justice
Secretary
Guilty
Not Guilty

Facsimile of the record of the Senate vote upon the 11th, 2nd and 3rd articles in the impeachment trial of President Johnson.

Conviction failed partly because the prosecution had no case. Impeachment had been brought about, as Senator Henderson said, by 'a counter-tide of passion, prejudice and political revenge,' and hence lacked moral or legal justification. But for Thaddeus Stevens and Benjamin F. Butler there would have been no impeachment. It failed, too, because decent men who were not swept away by partisan passion could not endure the thought of Wade as President of the United States—Wade who had shamelessly been among the most active partisans in a partisan court, who had persistently looked to his own interests, and whose political associations were anything but reassuring.

The radicals raged and Stevens in July brought forward five additional articles of impeachment as the occasion for a speech in which he threatened the dagger as a successful substitute for unsuccessful impeachment, but the country as a whole approved of the result, and a measure of quiet and confidence, absent since the plot against Johnson first became evident, now came.

Time has brought vindication. Eventually Sherman, Blaine, and even Sumner, admitted that impeachment was wrong. Historical investigators generally take the same view.

Once back in Tennessee, Johnson entered actively into politics and set the Senate as his goal. Largely because of his work and influence Tennessee first of the Southern States overthrew its reconstruction government in 1869. But he failed of election to the Senate because he had no party. Radicals of the Brownlow type hated him and secession Democrats loved him not much more. A combination of these defeated him by one vote.

Defeated he was not crushed and turned his attention to the organization of a conservative following. In 1872 he engaged in a three-corner contest for Representative from the state-at-large. The Democrats denounced him as a 'traitor to his state, and tyrant to his race,' while the Republicans dubbed him 'apostate from his party and ally of Jefferson Davis.' And once more he was defeated.

However, in 1875 he was finally, after a long contest, elected Senator, and on March 4, 1875, six years from his retirement from the Presidency he came upon the floor of the Senate. Seated there were men who had voted him guilty of high crimes and misdemeanors in office, and these joined with the rest in offering congratulations. If he felt bitterness against them he gave no sign of it. Oliver P. Morton said: 'After I had voted for his impeachment and met him accidentally, he wore the same kindly smile and offered me his hand. I thought that showed nobility of soul. There were not many men who could have done that.'

The triumph of his policy in the popular mind and the steady undoing of Congressional reconstruction had indeed done much to lessen Johnson's animosities. But one person was still unforgiven. His successor, in Johnson's view, was an impenitent sinner, and in his last speech, delivered in the Senate on March 22, he poured out upon him the vials of his wrath for his disregard of the Constitution, for his treatment of the South and for the conduct of his Administration.

His return to the Senate provoked much favorable and complimentary comment. Even so stalwart a party sheet as the New York *Tribune* said:

'His bitterest enemies are compelled to admit his sterling honesty and unswerving rectitude. In these days of moral and official delinquency it is no ordinary gratification for the people at large to have their national councils honored by such a man.'

With character vindicated, Johnson returned home. Stricken with fatal disease on July 29, he died two days later. He was buried as he had requested in his speech of 1861, wrapped in the flag of the Union, with his head resting upon a copy of the Constitution.

There in the Tennessee hills he rests, in his own words, 'in quiet and peace, beyond the reach of calumny's poisoned shaft, the influence of envy and jealous enemies.'

This is the third of a series of articles which have recently appeared in THE DEARBORN INDEPENDENT *on this subject. A fourth and final article will appear in an early issue.*

Where Americans Like to Go

(*Continued from page 5*)

introduced a new type of American tourist that it had never seen before in numbers. It was the student. The immigrant quarters were cleared out of the ships, new berths and rooms were put in and the steamship companies went after the student class strong, with the result that Europe saw more Americans with small money than ever before. Also it saw more rich Americans than it had ever seen before.

It just about drove some of the head waiters crazy, for there is nothing quite so upsetting to a head waiter as to look a customer over, do his best and find that the customer makes a ceremony of cashing a five-dollar traveler's check. Statistics are lacking, but it is said that more head waiters beat their wives to death during 1926 than during any similar time since the Empire.

So great was the tourist tide in Paris last year that one enterprising French restaurant, just off the Rue de Rivoli, put up a sign on its window—'Quick Lunch.' I know of one cash customer it lost.

Americans discovered last season that Paris is not the geographical limit of Europe. More Americans went to Germany, Bohemia, Rumania and Switzerland than ever before in the history of eastward migrations. Last season practically every hotel of the *premier rang* in Switzerland had a celebration in honor of the Fourth of July. Not so long ago only an American now and then could be found among these interior hotels, but these seasonal Marco Polos have gone to the most isolated spots. So many were there that when Charles Evans Hughes arrived at Riffelberg, high above the eternal snows of Switzerland, the Americans there were able to give him a reception.

If France should have a general strike that country would be torn from the Channel to the Mediterranean, and from Brest to Chamoni, and the chamber of deputies would be a performing circus. But not England. Will Rogers, who was there during the strike, said that he went to the House of Lords, which corresponds to our Senate, and that they were debating a bill about the—Boer War. While on the subject of England, I want to hand a flower to that solid, stolid country, as coming from the viewpoint of a traveler. And that is the sense of absolute honesty and integrity that one feels as soon as he gets to England. George Jean Nathan had a good line. He was in London during the summer and crystallized the great difference between America and England in this:

'In the theaters in America, they have to chain the opera glasses.'

As a whole we like France best of all, then England, then Italy, and slowly, very slowly, Germany is coming into favor. An item that had to do with it during 1926 was that Germany didn't care how many *chars-a-bancs* came roaring down the streets. Russia we learned little about; a few hardy travelers returned, but no two of them agreed as to what they saw. On the whole our attitude toward Russia was suspicion. We haven't quite made up our mind yet, but are waiting for more information—and distrusting it all. We learned a few things during the war.

Italy drew more Americans last year than it has in many years, and one reason for it was Mussolini. This compelling personality has aroused a great deal of interest in America and last year many Americans went to Italy as much to see how the Mussolini government was working as to see the Coliseum by moonlight.

Practically all Americans go to the Louvre, but for length of inspection and time spent, Montmartre wins without a struggle.

GREAT NORTHERN LAND IS ADVENTURE LAND

Mountain Climbing—another Glorious Sport at

Glacier
NATIONAL PARK

Open June 15 to Sept. 15

In this incomparable Alpine Playground you can fish for gamy trout; hike or ride horseback to colorful canyons and flashing waterfalls; shoot shaggy Rocky Mountain goats—with a camera; or enjoy impressive panoramas from comfortable motor coaches and launches. Choice of go-as-you-please tours or Burlington Escorted Tours. Mail coupon for information!

Men Wanted
By 4,000,000 Company

Training *FREE* This opportunity is paying men $5,000 to $12,000 a year. We are the world's leading makers of fire extinguishers. All types—approved by Underwriters' Laboratories. Fyr-Fyters are the recognized standard. Used by Diamond Match Co., Ford, Firestone, General Motors, U. S. Government, etc. Millions of stores, garages, factories, new buildings, etc., need Fyr-Fyters. We also have a new extinguisher for homes, autos, etc., at a record low price. Any man can sell them. They lower insurance rates. Everybody fears fire. You have a tremendous market and almost no competition. A few sales make you $17 a day. You often sell 25 or 50 to one customer! Also make steady income inspecting and recharging old extinguishers of all kinds. Free training.

Write Today! Simply ask for FREE Plan.

Fyr-Fyter Co., 1509 Fyr-Fyter Bldg., Dayton, Ohio

On Working Out Human Fractions

SCIENTISTS have been working for years on one problem in human fractions, without getting the right answer. The problem is: What part of an individual's personality and physical make-up is inherited and what part does he owe to his environment?

In what ways would you, for example, still be 'you' if you had had the same parentage, but had been born in China (or in Chicago, if you *were* born in China); and if you had had entirely different schooling, and a different set of childhood friends and diseases?

If we could all live nine lives, or even two, this could soon be checked up with plenty of facts. Practically the same double-experience situation can be obtained, once in a blue moon, if twins that are exactly alike are brought up in different homes.

DR. H. J. MULLER, professor of zoölogy at the University of Texas, recently was able to study a case of identical twins now thirty years old, who were separated when two weeks old and never saw each other again until eighteen years later. Even since then, they have lived apart nine-tenths of the time.

Both of these girls were brought up in the northwestern mining and ranch country.

One, J., has had some college education, taught school, is married, and has a child. The other, B., has had only four years' formal schooling in her life, and has had a busy career as a clerical worker in the West, in New York, Washington, D. C., and in France during the war.

With their entirely different education and experiences the twins made practically the same rating in intelligence tests, both being rated as very superior. The clerical twin excelled in arithmetic in the mental tests; while the teacher twin proved superior in seeing analogies, which involves a different type of reasoning ability. In most of the mental tests, however, their scores were very similar.

GREATER differences were shown in emotional and social attitudes of the twins. B., who has had a less sheltered life, is less unpleasantly aroused by things that might cause disgust, fear, or suspicion. She has fewer dislikes than the average person, while J.'s list of dislikes is more than average. B. has a smaller list of worries and a smaller list of things that she regards as wrong.

The twins themselves think their likenesses far outweigh their differences, and Dr. Muller believes that there are many other mental characteristics in which they would agree closely if these elusive traits could only be measured. Both are personally very agreeable and popular. Their tastes in books and in people appear similar. Each allowed her fingers to be blackened for the fingerprint test without any hesitation, but each turned her head when her finger was pricked for the blood test.

If Christ Came to Constantinople

(*Continued from page 2*)

Protestants, while Russia retained the 'right' to protect the Orthodox Greek communion. The result was that nobody was protected. Again and again did the Armenians rise and massacre whole villages of Turks. And each time the hand of Turkey fell heavily and ruthlessly upon the insurgents, rendering massacre for massacre. Nobody ever heard of such massacres until the Powers began grabbing Turkish territory and 'protecting' Christian minorities.

In 1922, the world was harried and its teeth set on edge by the events connected with the evacuation and the burning of Smyrna. But how did this holocaust start and what really happened? A year or two before, under the instigation and promised support of the British Government, a Greek army of conquest landed in Anatolia. Here is the way they started their operations, as described by Professor Arnold J. Toynbee, professor of Byzantine and Greek literature in the University of London (London *Times*, April 6, 1922). Professor Toynbee personally witnessed some of these events connected with this uncanny affair. Professor Toynbee wrote:

On February 14, 1922, Greek soldiers went to the towns of Sekisachack, Karatepe, and Efejieh, in the province of Smyrna, and ordered the population, including women and children, to assemble in the mosques to hear the new proclamation of the Greek Government. Then the Greek soldiers surrounded the building, nailed the doors, and by using petroleum, burned the mosques, in which the innocent men, women and children perished. In these three towns there is not a single home or building left untouched or undestroyed.

In that way, the Greek army devastated the entire country as far eastward as Konia, so that this whole district is now a desert strewn with human bones. The very air is haunted with the cries of murdered children and ravished women.

This horrible chronicle of barbarous events does not rest upon the unsupported word of Professor Toynbee, though his veracity cannot be challenged by anyone. The ferocity of the Greek forces is related by M. Franklin-Bouillon, who was sent there on a mission of investigation by the Allies. These outrages were also told in the report of the International Red Cross Workers after the evacuation of Smyrna. They are corroborated by William T. Ellis, who declared that 'the worst that the Turks had ever done to the Christians was matched by the conduct of the Greeks when their troops entered Asia Minor.' This outrageous conduct of the Greeks is further confirmed by Leonard S. Whittalls, the John Wanamaker of Smyrna, who was himself a refugee.

These Greek outrages were also confirmed by the report of the International Commission sent by Geneva to investigate, which commission included the American General Summerall. This report was suppressed by the Allies, fearing that it might arouse sympathy for the Turks. These matters are also confirmed in the reports of Mark L. Bristol, American High Commissioner to Turkey. The verity of these hideous Greek outrages is fully as well established as is the truth of the recent earthquake in Japan. Yet Christian pulpits throughout the world were bunked into voicing prayers to Heaven for the success of this Greek 'army of civilization'!

We shivered at the insane fury of southern mobs who would burn negroes at the stake, when they were accused of occasional offenses identical with those committed in wholesale by Greek soldiers against helpless Moslem women all the way from Smyrna to Konia. Suppose a foreign army should land on Manhattan Island and start operations by filling Trinity Church with women, men and children, lock the doors, pour oil on the building and roast all the people alive! Suppose this same army should invade the country as far west as Pittsburgh, burning towns and villages, murdering men, women and children, ravishing the school girls wherever found, and making the whole section for 500 miles a wilderness.

JUST visualize that. Then imagine how the entire Central West would rush to arms, drive the invader back to New York and into the sea, killing them in their insane frenzy wherever found. I doubt not that, if such a thing should happen, the American Government would place at the disposal of some 'Admiral' Jennings all available ships for rescuing the victims, as did the Turkish Government after the burning of Smyrna.

I do not plead for the Turk; the events of the last five years demonstrate that he is able to take care of himself, even when confronted with the hostility of all Europe. I do not plead for Mohammed; he has upward of 300,000,000 followers who can and do speak for him. I plead for Christ; that should He come to Constantinople, He be not hit with a brick thrown by some 'Christian' at some other 'Christian.'

Ancient Arabian Weddings

A CURIOUS custom prevailed among the Arabs of the Sixth Century. The night on which a bridegroom should wed his wife, they brought a quantity of camel pack-saddles and heaped them one upon the other, decorating them with magnificent garments. Here they conducted the bride, and, having seated her on high, they said to the bridegroom, 'Come on—now for thy bride!' And the bridegroom rushed forward to carry her off, while the youths of the tribe, drawn up in line, right and left, with staves and stones in their hands, as soon as the bridegroom dashed forward, began beating and pelting him, and doing their utmost to prevent his reaching his bride. If a rib or so were broken in the affair, it was well for him; were he killed, it was his destiny. But should he reach his bride in safety, the people quitted him, and no one attempted to approach him.

Why So Many of Us Behave Like Imbeciles

(*Continued from page 6*)

course, be impossible. It therefore follows that the measure of our understanding is proclaimed by our very act of selection of those whom we would honor, as well as by the amount of honor we choose to bestow.

One could go on almost indefinitely enumerating the various unusual glimpses of ourselves that we are getting by means of the radio and the movies. Who, for instance, would have believed there were so many young women who would fall for the sickish, sentimental and ofttimes disgusting songs that New York song writers of a certain class compose and sing over the radio? Practically all of these songs infringe upon good taste. They are rank and rotten —there is no other way to put it.

The probability is that people are not such fools as they sometimes seem to be. That we know so little is mostly because we have had no opportunity to know more. We sometimes seem to learn remarkably quickly, once we get a chance. There is a real craving for knowledge.

Everybody who buys a newspaper buys it because he wants to know what is in it. We do not always know what knowledge is useful and what isn't, but that is because we have not been at the business long enough to become experts. Most of those who, consciously or unconsciously, are trying to educate us by means of movies, radios, newspapers and even the colleges are not experts. The directors of radios, movies and newspapers do not even try to know what knowledge would be most useful for us and what wouldn't. Out for money as they are, the easiest way to get it is to take us in the ruts in which they find us.

MOVIE managers have seldom given any evidence that they think of anything but money. Radio managers perforate the air with music and what passes for it, explaining the while that seventy-five per cent of their listeners have written in that they prefer music. What do they prefer music to? They prefer it to the other stuff that has been put on the air. Why shouldn't they? The other stuff is, for the most part, as stupid as the worst music. But is there nothing else that could be broadcast? Might not something else, if it were wisely selected, be as popular as music? At any rate, is there any sense in 600 broadcasting stations devoting seventy-five per cent of their time to music?

Good music is good, but too much good music, with an utter absence of anything else that is worth while, is too much. Why not try something else? There is something else. A few of the radio stations have put on educational courses prepared in colleges. Is that the right way to do it? How many persons go to college for the sheer joy of it? How many would turn off a college as they dial out a radio station if they were to consult only their own desire? Is it not approximately true that a college course bears the same relationship to knowledge that dried apples bear to apples on the tree? Why not freshen up knowledge a little, when it is put on the air and make it more palatable? Writers are doing it with great results.

Radio and movie managers don't know this. They are plowing along in the stone age because it is easier to do that than to think. They declare the people are satisfied because they say they are satisfied. The people are always satisfied with what they have, provided they know of nothing better. The moment they know of something better they are dissatisfied. Give people something worth while to think about and present it in a way that they can understand and they will rise to it like a plant that gets sunlight all day and electric light all night.

Courage and Endurance

(*Continued from page 13*)

the Olympic Games at Amsterdam in 1928.

These Finns do not drink liquor. They eat little red meat. Most of them eat none. Their bread is an extremely coarse variety, the kind that is best for the stomach. Milk, eggs, fish (fresh and dried), poultry and fresh vegetables comprise their diet. Simple food for a plain people leading plain lives. They ride little, walk and run much. They are in the open, deeply breathing fresh air. There is little artificial about their lives and much that is primitive. They are close to nature.

The American idea of diet as regards athletes has been wrong in principle. For years our trainers prescribed set diets. Training tables, where from twenty to fifty men in preparation for athletic competition took their meals, presented one menu. Every man at the table was compelled to eat the same thing. But American trainers are getting away from that. They now cater to the individual.

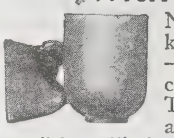
Trainers are more and more changing their methods. They study the individual athlete, discover what foods agree best with him and prescribe those particular foods for his menu.

Many athletic defeats in the past can be traced to improper diets. The training table has probably caused as much harm as good.

The English have always clung to the individual training menu. Systematic diets such as we follow in training quarters in this country were never known in England. There the athlete ate what he liked as long as the food agreed with him. He trained fairly much as he pleased. He never went on schedule, as we do over here. Training never became a grind to him. He made sports something to be enjoyed and not worked at. The menu of an English athlete would throw an American trainer into a state of speechless bewilderment. And yet these same Britishers held every running record from two to twenty-five miles until the Finns appeared on the scene.

There is no form of competition that demands more stamina and endurance than distance running, a sport where America has made a miserable showing compared to what she has done in other track and field events. Distance runners must have 'wind' and 'heart,' according to the popular belief. But there is a suspicion that America would have got further in distance competition had we given a different consideration to the stomach. We have talked so much about heart and lungs that we more or less neglected the one organ of the body that is the most important factor in athletic achievement. Men continue to fight on their stomachs.

Drink COFFEE Without Harm!



Nerves aren't affected by this kind of coffee! It's real coffee —not a substitute—but the caffeine has been taken out. The real coffee taste unaltered; the quick, bracing qualities still there; only the harm removed.

Drink all you want of this good coffee. Even late at night. For it can't keep you awake. It can't affect heart or kidneys, either.

The day you try Kaffee Hag is the day you settle the coffee question. At grocers; or clip the coupon now.

KAFFEE HAG 10¢

1670 Davenport Ave., Cleveland

Send me postpaid, enough Kaffee Hag to make ten cups of real coffee; I enclose 10 cents (coin or stamps).

Intimate Glimpses of Elbert Hubbard

(*Continued from page 3*)

never lost a meal through disinclination to eat, never consulted a doctor; nor did he use tobacco or intoxicants. His work was never regulated by the eight-hour clause; he toiled about sixteen hours a day, Sunday and Monday alike. It was hard, strenuous work; but Elbert Hubbard stood up under it without any abatement in energy to the time of his death because he found his joy in his work. Prodigious as were his labors, his tremendous ambition was never satisfied. His vision was so great he could never hope of attainment. Elbert Hubbard was a workman at heart. His best friends were men, women and children of plain working people.

Editors of magazines refused to buy his manuscript. They said it was too plain, too blunt, and sometimes indelicate. The subscribers would cancel.

'To get my thoughts published,' said Elbert Hubbard, 'I had to publish them myself; and people bought for the very reason for which the editors said they would cancel.'

THUS *The Philistine* came into being. When editors handled delicate subjects with their eyes on subscription lists and advertising pages, people knew they could turn to *The Philistine* and there read the honest opinions of a fearless editor who neither asked nor gave quarter and wrote as he felt and thought, regardless of canceled subscriptions or advertising. And he had plenty of both.

People knew where Elbert Hubbard stood. They did not need to guess, for he possessed the faculty—as well as the courage—to an amazing degree of expressing himself clearly and unmistakably.

Elbert Hubbard received numerous complaints concerning his magazine. 'If you want a perfect magazine,' he would say, 'there is just one way to get it: write it yourself.'

He believed that a portion, at least, of the American public wanted a few good and beautiful books. In 1892 when he met William Morris, he was sure he was right. And that is how the Roycrofters began to bind books in beautiful bindings and with hand-illumined pages. When he went to look for bookbinders, he found them all dead, he said. There were people in book factories binding books; but they fed them into hoppers, shot them out of chutes, and said they were bound. Finally, he found Louis Kinder, a Leipsic bookbinder, and then came the beautiful Roycroft books, considered masterpieces of art.

It was Major Pond who introduced Elbert Hubbard to the lecture platform. He spoke in Chicago, New York, Boston and other places, and wherever he went the lectures were a great success from every standpoint. The lectures served both as an added means of income to the Roycrofters and an advertisement for them.

It was in December, 1894, that Elbert Hubbard printed the first *Little Journeys* in booklet form in the local East Aurora print shop, as he had become discouraged searching for a publisher. Before offering the work to the public he decided to lay the matter again before G. P. Putnam's Sons, although they had declined it in manuscript form.

'Mr. George H. Putnam rather liked the matter,' said Hubbard, 'and was induced to issue the periodical as a venture for one year. The scheme seemed to meet with success, its novel form being in its favor. The subscription reached nearly a thousand in six months; the newspapers were kind and the success of the plan suggested printing a pamphlet modeled on similar lines, telling what we thought about things in general, and publishers and magazine editors in particular. 'We called it *The Philistine* because we were going after the "Chosen People," in literature.'

The printers were in debt. They offered Hubbard their establishment for one thousand dollars and he accepted.

'I decided to run *The Philistine* magazine for a year—to keep faith with the misguided and hopeful parties who had subscribed—and then quit,' he said later. 'To fill in the time we printed a book; we printed it like a William Morris book—printed it just as well as we could. It was cold in the old barn where we first set up *The Philistine* so I erected a little building like an old English chapel right alongside my house. There was one basement and a room upstairs. I wanted it to be comfortable and pretty, and so we furnished our little shop cozily. We had four girls and three boys working for us then. The shop was never locked, and the boys and girls used to come there evenings. It was really more pleasant than at home.

'I brought over a shelf of books from the library. Then I brought the piano, because the youngsters wanted to dance. The girls brought flowers and birds, and the boys put up curtains at the windows. We were having a lot of fun, with new subscriptions coming in almost every day, and once in a while an order for a book.

'The place got too small when we began to bind books, so we built a wing on one side; then a wing on the other side. To keep the three carpenters busy who had been building the wings, I set them to making furniture for the place. They made the furniture as good as they could—folks came along and bought it.

'The boys picked up field stones and built a great, splendid fireplace and chimney at one end of the shop.'

Thus the Roycroft shops grew and at the time of Elbert Hubbard's death they had as many as five hundred employes; the place was a mecca for talented and ambitious persons from all over the world. Some time before the *Little Journeys* was discontinued —after Elbert Hubbard had written one a month for fourteen years straight in the 'Little Cabin in the Woods'—*The Fra* was brought out, and *The Philistine* and *The Fra* were published up to the time of Hubbard's death.

Many have asked how Elbert Hubbard chose the name Roycrofters for his workers. He chose the word because from 1650 to 1690 Samuel and Thomas Roycroft printed and made very beautiful books; and the word had a special significance, meaning 'King's Craft.'

The thing that brought fame to Elbert Hubbard almost overnight and which is still popular was the *A Message to Garcia.* It was written without any appreciation of its greatness on the part of its author. Speaking of it, Elbert Hubbard said:

'This article, covering only fifteen hundred words, was written one evening after supper in a single hour. It was February 22, 1899, Washington's birthday, and we were just going to press with the March *Philistine.* The thing leaped hot from my heart, written after a rather trying day. The immediate suggestion came from a little argument over the teacups when my son Bert suggested that Rowan was the real hero of the Cuban war. Rowan had gone alone and done the thing—carried the message to Garcia.

'It came to me like a flash! yes, the boy is right, the hero is the man who does the thing—does his work—carries the message.

I GOT up from the table and wrote *A Message to Garcia.*

'I thought so little of it that we ran it without a heading. The edition went out, and soon orders began to come for extra March *Philistines,* a dozen, fifty, a hundred; and when the American News Company ordered a thousand I asked one of my helpers which article it was that had stirred things up.

' "It's that stuff about Garcia," he said.

'The next day a telegram came from George H. Daniels of the New York Central Railroad, thus: "Give price on one hundred thousand Rowan article in pamphlet form—Empire State Express advertisement on back—also state how soon can ship."

'I replied giving price and stated we could supply the pamphlets in two years. Our facilities were small and a hundred thousand pamphlets looked like a huge undertaking.

'The result was that I gave Mr. Daniels permission to reprint the article in his own way. He issued it in booklet form in editions of one hundred thousand each. Five editions were sent out, and then he got out an edition of half a million. Two or three of these half-million lots have been sent out by Mr. Daniels, and in addition the article has been reprinted in over two hundred magazines and newspapers.'

Since Elbert Hubbard wrote that, the *Message to Garcia* has been translated and printed in virtually every language, and it is said to have attained a larger circulation during the lifetime of its author than any other article ever written.

The most cherished memory in Elbert Hubbard's life was that he had seen Lincoln, just before he was made President.

'I saw Lincoln,' said Elbert Hubbard many times, with tears of reverence in his eyes for the man who was his ideal. 'I was only a small boy, but I remember him. My father picked me up in his arms and he said, "There he is! That is Lincoln."

'I will never forget that moment in all my life. He was sitting down. Finally he got up, this great gaunt, tall, lean, lank figure. He was taller than any one else in the courtroom, and then when he stood up he let out another "link"! His clothes didn't fit and they seemed just to hang on him. His speech was slow and his voice high-pitched at first. Then as he got started he was strong and eloquent.'

It was early in 1914 that I first met Elbert Hubbard. He delivered a lecture in a church at Waterloo, Iowa, and I was in the city at the time. He was a friend of the owner of the Irving Hotel where I stopped, and I met him there. By accident we took the same train early next morning for Cedar Rapids. We met again and had a talk. He told me about East Aurora, and as was his wont, he invited me to make him a visit. It turned out that in a few months I was at East Aurora. So began our connection.

Elbert Hubbard always worked. Even on his travels he wrote. Thoughts were jotted down on backs of envelopes, slips of paper, anything that was at hand when they came to him. That is why people wondered how he could write so much with all his traveling and lecturing.

When I became associated with him, I saw how necessary it was for him to use all his tact and cleverness in avoiding people who insisted on monopolizing his time. When Elbert Hubbard found that I was interested in talking when he cared to talk and could be silent or absent when he was otherwise interested, he removed from me that reserve toward people which I have heard so many mention. He was cordial, they said; but it seemed that you only got so close to him. This was necessary in self-defense. Otherwise, he would never have been able to get away to do the prodigious amount of work he had to do. He would stop long enough to get a group of people interested in some amusement, either throwing a medicine ball or playing catch with a handball or an ordinary baseball. He would get the women as well as the men engaged in the sport, and then of a sudden he would be missing.

EVERY morning or afternoon, however, sometimes both, he took the guests of the inn out for a walk through the woods or for some form of exercise around the Roycroft campus.

'If they sit around the inn all the time,' he said, 'they will lose their appetites and will kick about the food and say it is on the bum. If they get out and work up an appetite, they will enjoy what they eat.'

Elbert Hubbard was a Jeffersonian democrat—spelled with a small d. He believed that everyone should do some useful work, and his greatest delight was to get his aristocratic guests—men and women alike—who perhaps had never done a useful hand's turn in their lives, take them out hiking to his farm and put them to work picking up potatoes and doing other helpful things about the place. And the joke of it was that if any resented it he dared not show it, for guests who had previously gone through the same experience were there to enjoy the newcomer's discomfiture. It was all in the day's sport, and the newcomer came back again to see another put through the paces. And to make sure of a laugh he probably brought a guest or two along.

For fifteen minutes, or maybe more, if the spirit moved him, Elbert Hubbard had all his workers out morning and afternoon to play ball or some other game that would give them exercise in the open. They would go back refreshed and in happy spirits and do much better work and more of it than had they worked straight through. Elbert Hubbard knew psychology as well as the physical needs of workers. In work and play he set the example. He took as much joy in ordinary manual labor as in anything else he did.

'Get your joy out of your work,' he said, 'or you will never know what true happiness is. The trouble with most people is that they try to get more out of life than there is in it. You can't get more out of life than you put in it.'

(This is the first of a series of three articles to be published in THE DEARBORN INDEPENDENT *on this subject. The next will appear in an early issue.)*

Levacha—A Thief Hunt in Abyssinia

(Continued from page 8)

vegetable gardens, the *levacha* rushed in to a hut, lay on some cornstalks awhile and came out. The thief had slept here! Suddenly the *levacha* began to rush about and, running between two huts, he fell at last on a woman who lay in the ditch. This was the thief!

The director straightened his convulsed arms and carried him into the shade. I looked and saw the director stoop before the boy lying helplessly on the ground, and stare at his closed eyes with burning gaze. 'So, my good fellow, you are a hypnotist!' I thought, and turning away I felt sick and downcast. In 3,000 years of living this people had not acquired even a small measure of our culture but, perishing from leprosy and other loathsome diseases, had only preserved in the dark recesses of their life certain reflexes of a civilization that is past.

Involuntarily my brain began to conjure thoughts concerning astrological influences, concerning catching the astrological cliche, and concerning engulfing the astrological rays in water . . . But the lemon! What did it mean? Familiar with all their terminology and processes, my thoughts yet stopped at the lemon—till I concluded it was negro foolishness! The director approached me, his face haggard and sweaty. I looked at him attentively and when with his ease of manner—happening to be a government functionary—he sat down near me, it felt unpleasant and disagreeable again. A peculiar face, a rapacious-looking nose and deeply set eyes! Who elected him and who taught him this knowledge? How does he know a boy who is capable of being a *levacha?* The devil knows!

I was invited to the trial. Abyssinia practises the arbitration principle in her courts of justice. The judge is recognized by both sides in the suit to be absolute and his decision cannot be appealed. It was not so exciting as usual this time. Lawyers and plaintiffs did not howl nor leap with straightened arm and stiffened forefinger. There were no quarrels nor shouts of the sides. The woman confessed to everything as did her husband likewise. I ordered them handcuffed and led the defendant in the case to the *levacha,* who grasped hold of his *kouta* (robe), never letting loose until paid his five talaris for his work.

Then down by the river in the evening the thieves, having paid their fines and restored the stolen goods to the owner, conversed again peacefully with the plaintiff and others, all laughing happily together. Abyssinia is a very strange country.

CHATS WITH OFFICE CALLERS

'People outside New York,' said ***the Credit Man,*** 'haven't much of an idea of the handicaps that decent business men are forced to contend with there. Recently the federal grand jury indicted eleven men in four true bills, each charging complicity in the concealment of assets from trustees in bankruptcy. Two of them, Harry Reiman and Samuel Licht, were indicted in connection with a silk mill which failed with liabilities listed at $76,000 in excess of the concern's assets. Then four dress manufacturers, Isadore Cohen, Jacob Rosenthal, Abe Goldman and Al Jacobs, were indicted, their firm having failed after it had been in business only thirty-eight days, with liabilities of $45,000 and no assets. Other dressmakers also were indicted for concealing assets following their failure as dealers in women's coats. Hiding assets after bankruptcy has become one of the leading sports in the clothing and textile trades in New York.'

'The good Samaritan still frequents the highways of life,' said ***the Traveling Man.*** 'The following illustrates what I mean. One night last November on the Twentieth Century Limited between Buffalo and Cleveland, a New York City man was stricken with acute indigestion and a slight stroke of paralysis.

'A fellow traveler, who was aroused by the signs of his distress, dressed and gave assistance. The volunteer suggested that the sick man leave the train at Cleveland and seek a physician, but he was anxious to reach Chicago and decided to continue. At Toledo, however, about five o'clock in the morning, he was forced to give up. His traveler nurse left the train with him, put him in a taxicab, accompanied him to an hotel, and obtained a physician and made things as comfortable as possible until hospital arrangements could be made.

'Before they parted the sick man asked his fellow traveler's identity and learned that he was a detective in the service of the railroad, bound for Cleveland to spend the week-end with his family. Touched by the ill man's plight, he allowed him to infer that he, too, was going to Chicago.

'Another interesting angle to the story is that when the ill man left the train he offered the porter a five-dollar bill in acknowledgment of the fine service rendered during the long, painful hours of the night. The porter bowed to the sick man, refused the tip and wished him a quick recovery.'

'They have a new way of calling you to your meals on one of the great western railways,' said ***the Tourist*** who had just crossed the continent. 'Instead of awakening you in the morning with a strident, "*Foist ca-a-all* for *break-fast,*" they use plate chimes. The waiter stands in the vestibule and taps very softly, but the chimes fill the whole car. The music seems to seep from everywhere and nowhere at once.

'The waiter on our train used a different call for breakfast and for luncheon and for dinner. He was learning the gamut of army calls: reveille, taps, mess, sick call, fire, fatigue, assembly, dress parade . . . What he hopes to use them all for I can't say, but the practice is just another example of the manner in which the railroads are trying to please the public; the "public be damned" policy has gone forever. The railmen learned it didn't pay: and now they are out to serve the public.

'One company proudly advertises: "Today fast freights move with swiftness undreamed of six short years ago." And it goes on to tell of revolutionizing its operations so that hundreds—and even thousands—of hours are saved to shippers. It passes on to its employes and says: "These men numbering 50,000 serve you with pride in their record and with the profit of their experience."

'The classic example in railroad reform, though, is furnished by a Canadian line. A half-dozen years ago when I traveled it, the railroad was demoralized. The employes were insolent; the service was intolerable; trains ran haphazardly if at all; freight moved slowly; tie-ups were frequent; and the road was regarded as one of the most inefficient in North America. Today it is a model of good railroading. The employes are courteous, the service excellent. Trains run on time, freight moves speedily, and the road is well liked by the people whose territory it traverses. The change was wrought by one man—a man trained in the United States—and a man who believes in the new railroad slogan of *service.*'

'Are you looking for complaints?' asked ***the Rural Mail Carrier.*** 'Well, here's one. Some firms advertise, "Don't send a penny until you get the goods," but that is a snare, for the purchaser is not allowed to unwrap nor to inspect the goods until he has paid the charge. The business from this sort of advertising has grown enormously and has become an intolerable nuisance. A rural mail carrier has enough other work without being a collector. The party to whom the package is directed must be found. He may not be at home for several days, which means that the parcel is carried around until he returns and collection can be made. Sometimes a parcel cannot be delivered, because the addressee is out of funds and it is carried until the financial situation changes and delivery can be made.

'As I interpret the C. O. D. regulations, they were not made for such business and it is an abuse of privilege on the part of concerns using the C. O. D. convenience for a general collection agency.'

'The Danish farmers,' said ***the Country Editor,*** 'have come in for their share of publicity. They have been praised for the manner in which they have snatched success from the shoals of failure and rightly so, for they have kept at the thing until they are in an enviable position agriculturally. And here are some figures of the results of their toil.

'The average investment last year for agricultural purposes worked out, for all of Denmark, at approximately $278 an acre: the gross earnings averaged $124 an acre, and net proceeds averaged $26 an acre, or 9.6 per cent on the agricultural investment. These earnings meant that, after deducting interest on investment at five per cent, each farming family had an average of $29 an acre as the reward for its efforts.'

'I have an ambition,' said ***the Pedagogue,*** 'to be a psychologist; but I have no desire to be called one in general society. I have taken courses in psychology, have written theses on typical problems, have even taught classes in it. It is perhaps the greatest of all sciences and the most important to man. But most of what is called "psychology" in current print and conversation is not psychology at all, and any man with any kind of a set of notions about life may call himself a "psychologist," while if he called himself a civil engineer he might have trouble. You can't be a pharmacist and dispense drugs without special education guaranteed by diploma and licence. But you can be a psychologist without knowing how to define the word, and though scarcely able to spell it. To be a psychologist is still my chief ambition as a student and a teacher, but to be called one in the present age, with the present scandalous assumption of the name by charlatans, is almost insult.'

'At an auction of household goods the other day,' said ***the Auctioneer,*** 'a woman raised bidding that started at fifteen cents to three dollars and when the article was knocked down to her at that price, she asked what she had purchased.

'"A mousetrap, madam, a most excellent mousetrap." To which she replied, "I don't care, I beat her to it."

'Her sporting blood was up. Experienced auctioneers will tell how the feeling of bidders that they must win often brings a fancy price for something of moderate value. The competition is what counts.'

'This so-called "crime wave," ' said ***the Police Reporter,*** 'simply shows crime in some new aspects. There has always been the crime wave running through the lower strata of the liquor trade and the violations of the moral code. The bootlegger of today is a lawbreaker. But the lawbreaking saloon was with us in the old days, violating laws on closing, violating laws on selling liquor to minors, violating laws on permitting women to enter, violating laws against gambling. It was the breaking of laws by saloons, with their constant interference in politics, that made my state dry as much as any other cause. The crimes of violence, especially murders, in my reportorial days before prohibition, were usually incited by liquor, or had some relation to violated morality. You can see, in one celebrated murder case after another, how extensively the fatal destructiveness of the Strange Woman, emphasized in the Bible, is demonstrated in our modern life. The crime wave of today extends wide and far, but the world of booze and the world of the red light have never been without it.'

CAN YOU TELL ME?

QUESTION: Why were the northern Democrats who sympathized with the South during the Civil War called 'copperheads'?

ANSWER: The term 'copperhead' originated in the autumn of 1862 and was an opprobrious epithet applied by the Union men to those who adhered rigidly to the Democratic organization, strenuously opposed all the distinctive and vigorous war measures of the Administration and of Congress, and who deeming it impossible to conquer the South were therefore earnest advocates of peace. The name was generally indicative of a treacherous character and was a reference to the habit of the copperhead snake which strikes without warning. Another explanation is that it came from the button cut out of a copper cent, on which was the head of the Goddess of Liberty, worn by the opponents of the war.

QUESTION: What understanding, if any, did the United States have with the Vatican in taking over the Philippines?

ANSWER: Three orders of friars, namely, the Dominicans, the Augustinians and the Recollets held more than 400,000 acres of the land. These lands were rented to the natives on shares in small holdings. When the friars were driven out by the insurgents they transferred their agricultural lands to corporations but the tenants refused to pay rent and naturally opposed the return of the friars. The Philippine Commission early proposed the purchase of these lands by the American Government but the friars demanded high prices and long negotiations followed necessitating direct relations with the Vatican, Governor Taft visiting Rome for that purpose. The price finally agreed upon in 1903 was $7,239,000 for 410,000 acres.

QUESTION: Who discovered King Tut's tomb?

ANSWER: Lord Carnarvon and Howard Carter.

QUESTION: Were any dimes issued at the branch mint in San Francisco during the year 1894?

ANSWER: At the San Francisco Mint in 1894, dimes in the amount of $2.40 were made.

QUESTION: Does the President have to place his signature to an amendment of the Constitution before the amendment goes into effect?

ANSWER: Among the precedents which have grown up in connection with the exercise of the veto power is one that the President has no power to veto a resolution proposing an amendment to the Constitution; consequently it would be immaterial whether or not he placed his signature to an amendment.

QUESTION: I should like to know what the Eleventh, Twelfth and Seventeenth Amendments are and what year they were added to the Constitution.

ANSWER: The Eleventh Amendment, put in force January 8, 1798, reads as follows: 'The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States, by citizens of another State, or by citizens or subjects of any foreign state.' The gist of the Twelfth Amendment, declared in force September 25, 1804, is the naming of the candidates for President and Vice-President separately; before this the candidate receiving the highest number of votes was President and the one receiving the next highest, Vice-President. The Seventeenth Amendment, declared in effect May 31, 1913, provides for the election of Senators by the direct vote of the people.

QUESTION: How is the number of Senators and Representatives determined in the legislatures of the states?

ANSWER: Representation in proportion to population may be regarded as the established American state policy although there are numerous departures from the strict rule and in a few states gross violations of the principle allow the existence of a 'rotten borough' system. In many of these states the former historic unit of representation, the county or town, is retained partly for partisan purposes and partly to protect a minority, usually rural, against an industrial and urban majority. The constitutions of eighteen states provide adequately for proportionate representation in both houses. In the remaining thirty states there are modifications of the rule for one or both houses of which the most common is that each county or town shall have at least one representative.

QUESTION: How many state representatives and senators are there in Maine?

ANSWER: There are thirty-one members of the senate and one hundred fifty-one members of the house all elected biennially on the second Monday in September

QUESTION: What is the basis of representation in the House of Representatives?

ANSWER: The basis of apportionment under the census of 1910 is one Representative to every 212,407 inhabitants.

QUESTION: How many Representatives does each state have in Congress?

ANSWER: Alabama 10; Arizona 1; Arkansas 7; California 11; Colorado 4; Connecticut 5; Delaware 1; Florida 4; Georgia 12; Idaho 2; Illinois 27; Indiana 13; Iowa 11; Kansas 8; Kentucky 11; Louisiana 8; Maine 4; Maryland 6; Massachusetts 16; Michigan 13; Minnesota 10; Mississippi 8; Missouri 16; Montana 2; Nebraska 6; Nevada 1; New Hampshire 2; New Jersey 12; New Mexico 1; New York 43; North Carolina 10; North Dakota 3; Ohio 22; Oklahoma 8; Oregon 3; Pennsylvania 36; Rhode Island 3; South Carolina 7; South Dakota 3; Tennessee 10; Texas 18; Utah 2; Vermont 2; Virginia 10; Washington 5; West Virginia 6; Wisconsin 11; Wyoming 1, and 5 delegates from the territories as follows: Alaska, Hawaii and Porto Rico 1 each; Philippines 2; making a total of 440.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

QUESTION: What is the subscription price to the *Army and Navy Journal* and where can it be procured regularly?

ANSWER: The subscription price is six dollars a year and may be remitted to the Army and Navy Journal, Lenox Building, 1523 L Street N. W., Washington, D. C.

QUESTION: Did Richard Neville, Earl of Warwick, called the 'King Maker,' leave any descendants?

ANSWER: Warwick bestowed one daughter on the Duke of Clarence and had an understanding that Margaret of Anjou wed her son to Anne, another daughter, upon which understanding Warwick engaged to restore the crown to Henry VI.

QUESTION: What are some of the largest dams in the United States and their locations?

ANSWER: The world's largest rock-filled dam is being constructed across the Dix River in Kentucky which it is asserted will develop more power than the famous Roosevelt Dam in Arizona. It is 1,020 feet long and 300 feet high. Dallas, Texas, has under construction an hydraulic fill dam across Elm Fork of Trinity River which will be two miles long and 80 feet high. The Belle Fourche Dam, South Dakota, is 6,493 feet long and has a maximum height of 122 feet. It is built of heavy clay and is 19 feet thick at the top and 620 feet at the base. The Gatun Dam (Canal Zone) is 7,700 feet long, 115 feet high, 100 feet wide at the top and 2,019 feet at the base. The hydraulic fill has a base 1,200 feet wide. The Calaveras Dam, an adjunct of the San Francisco water supply system, is the highest earth dam on record. It is 1,260 feet long with a maximum height of 240 feet above bed rock. The Ashokan Dam at Olive Bridge, New York, is 4,650 feet long and 252 feet high. The Keokuk (Iowa) Dam is 4,360 feet long and 53 feet high. The Wilson Dam, on the Tennessee River (Muscle Shoals), has a height of 142 feet, a length of 3,098 feet for the dam proper, and a total width of 4,900 feet.

QUESTION: What was the per capita amount of money in circulation in the United States in 1880, 1890, 1900, 1910, and 1920?

ANSWER: The per capita amount of money in circulation in 1880 was $19.41; in 1890, $22.82; in 1900, $26.93; in 1910, $34.33; in 1920, $50.11.

I READ IN THE PAPERS

Independent as the farmer is at present, he may soon be even more so, at least from a power standpoint. For the last year a windmill of ordinary size, connected with a generator, has been in use at the rural engineering department of the University of Nebraska. During the year there was generated a total of 730 kilowatt hours. According to Professor E. E. Brackett, head of the department, this is more than twice the amount required for everyday farm use. It is much more than the average city consumer uses in a year. It is sufficient to light the house, run the light types of machinery and still have a balance. The generator will operate in a wind of ten miles an hour. Hitherto it has been presumed that wind power is too capricious a source of supply to be depended upon. But there need not be continuous generation. Five hours' charging every two or three days will generate and store sufficient current to light an average farm establishment for two or three days.

Turning Wind Into Electricity

ɣ ɣ ɣ

A terrific explosion in the laboratory of Henry Spahlinger, a Geneva bacteriologist, scattered millions of tubercular microbes over the room. The scientist was experimenting with an emulsion of hyper-violent cultures contained in a huge flask under pressure when it let go with such force that an assistant on night duty in another building heard the report. Spahlinger was uninjured by the explosion but divested himself of garments, which he washed in a strong lysol solution. He then thoroughly fumigated the laboratory permitting no one to enter until it had been thoroughly cleansed.

ɣ ɣ ɣ

Montana proposes to make gun toting a felony. Alas, the effete open spaces.—New York *Sun*.

ɣ ɣ ɣ

Forty-five years ago 1,100 wild Indians, under the escort of a troop of United States cavalry, made their way north through what is now Montana toward the international boundary line. The morning sun gilded Mount Cleveland's peak 10,000 feet high on the left of the column. The troops milled their charges to the east of the low mountain range known as the Hudson Bay divide. The Indians were a sullen lot. They had broken from their reservation near the Belly River in what is now Southern Alberta. Swinging south into their old buffalo hunting grounds, they had crossed the line into United States territory where they pillaged and murdered hundreds of whites. An entire squadron of United States cavalry rounded them up and were now pushing them north to the border. American scouts returned with news that there was no escort to meet them at the border. This was serious, as food supplies were low and the natives in a bad humor. The cavalcade was halted as the American commander rode forward. On the line stood a lone member of the old Royal Northwest Mounted Police, his bright scarlet jacket shining like the feathers of a cardinal in the drab landscape.

'I'm It,' Said the Escort

'Where is your escort?' thundered the American commander.

'I'm it,' replied the dignified 'Peach' Davis.

Alone and practically unarmed, this Canadian took charge of 1,100 Indians smarting under their recent defeat and they followed meekly in his wake back to Belly River and the monotony of reservation life. The man who thus thrilled two nations and awed a savage horde forty-five years ago has just retired from active service in the Royal Canadian Mounted Police.

ɣ ɣ ɣ

You can always tell the conservative side in Central America. It's the one guarded by six U. S. marines.—Birmingham *News*.

ɣ ɣ ɣ

The writer of a letter is the owner of that letter regardless of the addressee. To the layman this sounds peculiar, but it has been a principle of law for two hundred years. The many recipients of letters from Theodore Roosevelt were surprised to learn that they must first have permission from the Roosevelt estate before they could publish them. Mrs. Woodrow Wilson refused to permit the editor of the letters of Ambassador Walter H. Page to include in the volumes any communications to the ambassador signed by the late President Wilson. This principle is part of the old English common law developed by judicial decisions. Alexander Pope, the poet, in 1741, sought to restrain the publication of letters written by him to Dean Swift and others. The Lord Chancellor continued an injunction and asserted no distinction could be drawn between these letters and books or other learned works. A series of English and American decisions has followed the Lord Chancellor's reasoning. This makes it a bit difficult in some instances. For instance in such a contribution to world history as that by Colonel House, the public was at a disadvantage in not having the Wilson letters to House at hand. Some go so far as to advocate a new development in the law to change the situation.

Basque fishermen of France, and not Columbus or the Norsemen, discovered America, according to a well-known French writer, Leon Sazie. He claims that the fishermen in search of cod sailed far to the north and west bringing up at the Newfoundland Banks.

The International Jew in 4 volumes: *The International Jew*, Vol. I, 235 pages; *Jewish Activities in the United States*, Vol. II, 256 pages; *Jewish Influence on American Life*, Vol. III, 256 pages; *Aspects of Jewish Power in the United States*, Vol IV, 246 pages. Price: 25 cents each; set $1. THE DEARBORN PUBLISHING COMPANY, DEARBORN, MICHIGAN.

A bill to protect Manhattan's night-club patrons from overzealous check-signing proclivities has been introduced into the New York legislature by Assemblyman Arthur I. Miller of Yonkers. The proposed law would make it punishable by $2,500 fine or three years' imprisonment for anyone to obtain the signature of a person whom he knows to be intoxicated, to any written instrument, such as a check. Mr. Miller introduced the bill at the behest of an aggrieved constituent who went down from Yonkers to the white light district and discovered afterward that his checks kept coming back to him for days.

Checking Up Checks in Night Clubs

The method by which the night clubs operate, according to Assemblyman Miller, is this: When a patron has imbibed too freely of such things as night clubs sell and finds himself short of ready cash, the hostess obligingly tells him the proprietor will accept his check for the amount. A check book is produced and the patron signs. But the first result is not so good. 'Better sign another,' urges the proprietor. And another and another. It is all a fine joke and the patron enters heartily into the spirit of the thing, especially when he sees the proprietor 'tearing up' the discarded checks. But later he discovers that all have gone to the bank, and his patience at learning to write has cost him hundreds of dollars.

Let us hope that those Chinese safety zones serve the purpose better than some of our automobile variety.—Indianapolis *Star*.

ɣ ɣ ɣ

Timely remarks by a parrot saved its own life. It happened that suit was brought against a boarding house roomer, owner of the parrot, by an occupant in an adjoining room, who made the complaint that whenever he moved about his room, the parrot would shriek, 'Keep quiet, you idiot!' While the trial was in session, the parrot was brought into the courtroom, for it was its life that was at stake. The judge, starting a remark, was startled to hear in clear, bold tones, 'Keep quiet, you idiot!' whereupon the judge decided that such a courageous bird deserved some consideration and declined to grant the demand for its extermination. The parties were advised to settle the dispute out of court.

'Keep Quiet, You Idiot!'

When a modern woman is sewing on tiny garments they're her own.—Ketchikan *Chronicle*..

ɣ ɣ ɣ

Pharaoh's people in the Land of Egypt were plagued by locusts. Now billions of the insects are destroying crops and causing serious damage in the Gujarat district of India. The insects arrived in mass formation. At one point the locust cloud was five miles long, half a mile wide and twelve feet deep. Another swarm reached the length of twenty miles.

Egypt's Plague in India

BRIEFLY TOLD

WHEN LUTHER BURBANK decided to destroy his old letters, it was discovered that he had accumulated 85,000.

WOMEN AND MONEY will be barred from a new colony which a group of young sailors have announced they will found on Santa Maria Island in the South Seas. The sailors, who own and operate their own schooner, have all been divorced, separated from ill-natured wives or disappointed in love.

EVERY CHILD WHO HAS ever been the guest of a certain New York hotel is the yearly recipient of a birthday cake from the hotel's chef. As a builder of future business, this plan, according to the hotel executives, is without parallel.

DESERTED BY THEIR MOTHER, three lion cubs, born in Oakland, California, were adopted and fed by a Spanish setter.

RATS PARKED IN A fire hose of the Schaumberg, Illinois, fire department, checked the water to such an extent that fire destroyed $40,000 worth of property.

'FOR SALE A PRISON,' is the novel advertisement displayed in Switzerland, recently, after the building had been empty for years.

THE AMERICAN QUICK LUNCH, with its high stools, flipping flapjacks, odors of 'ham an'' and shrill cries of waiters, has invaded Mexico City. Siestas are broken as the crowds flock to eat sandwiches at the new white fronts.

TREES FOUR FEET in diameter that never grow more than one foot high have been found in Africa.

OFFICE WORK IS THE vocation in which women stand the best chance of marriage, according to a recent survey.

A SOFT BED WILL build as much mental energy for the sleeper in six hours as a hard bed will in eight, is the conclusion reached by a noted psychologist.

HENRY III OF FRANCE had so great a dislike for cats that he would faint at the sight of one.

THE INTERNATIONAL ASSOCIATION of Clothing Designers and the National Association of Retail Clothiers and Furnishers agree that the American man is the best dressed.

NEAR HOUSTON, TEXAS, the bullfrogs migrating from one swamp to another caused a traffic jam.

THE GROWING OF THE modern variety of apples was introduced into England from France and Holland about four centuries ago.

IN THE UNIVERSITY of California mineral collection is a spruce cone completely changed to opal.

CHINA, THE HOME of the silkworm, is buying quantities of silk in the finished garment from America and France.

IN THE PERIOD of the Civil War, Centenary College of Louisiana was closed. All her students answered the call to arms. Every member of the senior class of '61 died on the battlefield.

THE VERB 'WALLOP' was added to the dictionary from the name of Sir John Wallop, a British soldier who inflicted some heavy defeats on the French.

SHOOTING CARIBOU from the trains in Alaska is now forbidden. The train must come to a stop before passenger hunters may fire. Heretofore trainmen shot their winter's meat on the way up and stopped to pick it up on the return trip.

SIX AMERICAN, TWO CANADIAN, three Spanish, two French, six Italian, five Belgian coins, one German mark and a street car pass between Philadelphia and Wilmington, Delaware, were found in a collection taken at St. Patrick's Catholic Church in London.

PRINCE MAELGWN GWYNEDD of North Wales, to prove the superiority of song over instrumental music, had his harpers cast their instruments into the river Conway and then swam across followed by his singers. The harps were useless after the soaking while the singers sang as before.

HYDE PARK, VERMONT, claims the United States savings record. Deposits in its single bank show an average of $7,717 for each of the 368 inhabitants of the village.

PAPER CURRENCY NOW lasts only about half as long as it did before the war. Experts say this is due mainly to oil and grease soaking into the paper money at automobile service stations.

THE ANNUAL HUNT for 'Kettlefoot,' a black bear, is again under way in the Black Mountain district of North Carolina. The bear, which hunters say weighs 600 pounds, was named from the peculiar shape of his track which resembles an old-fashioned iron kettle.

SPAIN NO LONGER has an optional siesta, this daily noonday rest being required by law under the new dictatorship.

THE UNITED STATES food bill shows an annual retail valuation of between eighteen and twenty-two billion dollars. More than 43.1 per cent of the average workingman's family budget is expended on food.

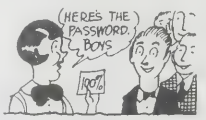
THE PEOPLE OF AZZIZIA, a desert village in Tripoli, North Africa, are forced to live in underground dwellings, reached by tunnels through the rock, in order to withstand the temperature of 136 degrees Fahrenheit.

MIRACLE PLAYS, brought to the Southwest by Spanish priests hundreds of years ago, are still given by Mexican or Indian residents of Texas and Mexico practically in their original form.

A FORMER LITERARY reviewer in London is employed by two authors to buy all their books offered at bookshop 'clearance sales.' Nothing, the authors state, is so harmful to the high-class novelist as to see his works sold at cut prices.

A TEST CONDUCTED by a French professor of agriculture showed that six hens which received a small amount of wine with their daily food produced 169 more eggs during a six-month period than six other hens given prohibition fare.

THE FINGERPRINT SYSTEM, used by the United States War Department for more than twenty years, has thoroughly demonstrated its value as a means of identification; 5,023,881 prints on file in the office constitute the largest collection of its kind in the world.



GIRL STUDENTS at William and Mary College who do not make eighty in their studies may not have 'dates' and other social privileges.

JUDGE D. B. DEEM, of Poplar Bluff, Missouri, in his thirty years as judge, has eliminated the word 'obey' from 5,285 marriage ceremonies. 'It's the bunk,' he states, 'to make people swear to do what they won't.'

A SURVEY OF VOCATIONAL preferences taken among women students of the University of Kansas showed that only seven of the 1,513 questioned wanted to be housewives.

REYKJAVIK, CAPITAL OF Iceland, will be completely heated by water from the nearby hot springs if the plans of the prime minister are carried out.

NOTED MEN HAVE BEEN known to be superstitious. Charles Dickens believed in the luck of Friday and the Earl of Balfour when in the House of Commons was often seen to 'touch wood.'

THE ISLAND OF Ste. Marguerite, where the 'Man in the Iron Mask,' made famous by Dumas, was imprisoned in 1687, may become a British winter resort, if reports of its proposed sale by the French Government are true.

MORE THAN THREE MILLION yards of surplus canvas, intended originally for army tents and wagon covers, has been turned over to post office authorities for use as mail bags.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the signs of the times.

ɾ ɾ ɾ

If Christ came to Constantinople what would He find? Would He find His professed followers models for the Moslems who ousted them in the 15th Century? W. E. (Pussyfoot) Johnson says it is very much the other way. With a few futurist strokes of his brush he presents to us a spectacular sketch of conditions today in ancient Byzantium, the former capital of Christian civilization. The cross of Constantine—'By this sign conquer'—has been dragged in the gutters of Galata, but not by the Moslems. Perhaps it is as well that they are the custodians of St. Sophia. (p. 1)

ɾ ɾ ɾ

With the sinking of the *Lusitania* there vanished that rococo figure of American philosophy, Elbert Hubbard. But his torch was not extinguished in the sea. The things he wrote were not cast to the bottom beneath a barrier of waves. They are still read in the bright sunlight. (p. 3)

ɾ ɾ ɾ

Does the present generation know just what manner of man Elbert Hubbard was? James W. Beckman, who was his confidential secretary and friend, in a series of kaleidoscopic reminiscences gives us glimpses of the sage just as he was. Hubbard was not as some of his disciples imagined and much more than many of them thought. He required not the meretricious aid of luxuriant locks and flowing tie to make him a genius. (p. 3)

ɾ ɾ ɾ

As observed by Ruggles of Red Gap, Americans when they go to Europe do not always go where you expect them to go you know. The Louvre? Perhaps. The tomb of Napoleon? Maybe. Versailles or Fontainebleu? Possibly. But one thing is sure; Montmartre and the Moulin Rouge are not also-rans in the itinerary. Homer Croy is our authority. He has been 'takin' notes,' and 'faith he's prented them.' (p. 4)

ɾ ɾ ɾ

Carlyle told the world, among other things, that it was mostly made up of fools. However, it is some consolation to know that we do not behave like imbeciles because we belong to the species, but because the grains of imbecility that lurk in the gray matter of every human being are occasionally stirred to the surface by abnormal happenings such as the return of a female channel swimmer or the last obsequies of a film star. (p. 6)

ɾ ɾ ɾ

In making the world safe for democracy have we forgotten to make domiciles safe for its saviors? Are there long ranges of leaky and insanitary hutments belonging to the war period in which our gallant defenders are huddled? Marian Bruce Clark calls them hovels and asserts that the objective of providing decent accommodation for American soldiers will not be reached during the present generation. (p. 7)

ɾ ɾ ɾ

Abyssinia is a country that we know little of, but Pavel Bouligin, a Russian official on the spot, draws aside the veil and shows us a thief hunt in the land of the Queen of Sheba, with the mysterious *levacha* as the central figure. (p. 8)

ɾ ɾ ɾ

Napoleon's dictum that an army fought on its stomach is just as true today as when he lost Waterloo, as some say, because he had a bilious attack. To say that a man 'hadn't the heart to do it' is all wrong. It should be 'he hadn't the stomach to do it.' This in times of peace applies particularly to sport stars, H. G. Salsinger tells us. (p. 12)

ɾ ɾ ɾ

The trial of President Andrew Johnson was more like a play staged as an outlet for the rancor of his enemies than a bona fide attempt to purify the White House. Tickets were issued and the privileged crowded to the show. Johnson's trial was melodramatic part of the time, farcical most of the time, and unreal all the time. J. G. de Roulhac Hamilton gives us its true perspective. (p. 14)

ɾ ɾ ɾ

Then there is the American black bear. F. J. Clifford comes to the rescue of this much maligned animal. (p. 19)

ɾ ɾ ɾ

Delphos, Kansas.

If you have copies of your issue of December 11, 1926, that you can spare please send them. *That issue* contains Dr. Barton's article on Lincoln and tells the incident of his wearing a beard. My wife, Grace Bedell Billings, was the author of the letter referred to and she is still living.

GEORGE N. BILLINGS.

Chicago, Illinois.

As per your suggestion I will say that my only complaint is that the D. I. is 'Dry' right or wrong as Decatur would say.

A. GAUTSCHI.

Badgerow Office,
Sioux City, Iowa.

Just a word of sincere appreciation for your instructive magazine, THE DEARBORN INDEPENDENT. I read each copy carefully because it is different and takes up things the other publications neglect. The editorial policy pleases and deserves place in every home.

EGBERT M. BADGEROW.

Kansas City, Missouri.

I have just read Mr. Ford's Page on the marines landing somewhere. It stirs me so much I am writing to congratulate you. That is great stuff, particularly the part that is in the box. Those of us who travel all over the earth know that the American navy is largely used to protect Standard Oil and other great financial interests of America.

I am glad there is some magazine in America which can speak the truth on these questions.

CAMERON WILKIE.

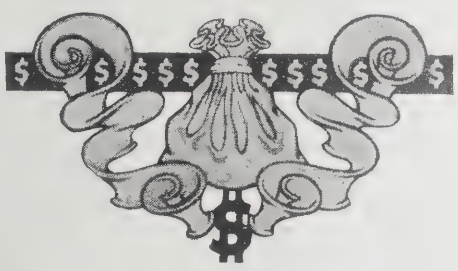
DEBT—Our Biggest National Industry

MONEY—Our Most Costly Commodity

Why Should $100 Really Cost $210? Can the Price of Money Be Decreased?

By HENRY LAKET



THE whole subject of money has long been a clouded proposition. The intent here is to draw attention to some strange features of this complex matter. I hope in the main to show that those who 'borrow' money—the purchasers of this 'commodity' so to speak—pay for it not only a great deal more than it is worth, but also pay for this stuff the highest price that is paid for any basic product in use in the world today.

MONEY, as a commodity, is the highest-priced thing in the world.

The high price of money is due solely and entirely to one factor—that it is bought and sold *only* on the installment or deferred-payment system. That is to say, money does not change hands for cash—it has practically no cash market in the strict sense; it finds its market only among those who cannot pay 'cash'; it is strictly an installment business, and consequently on top of its actual worth, its actual value, it carries an assortment of handling and intermediate charges (frequently imaginary for the most part) which makes the ultimate cost to the 'consumer' or user of money considerably higher than its real value. Money's peculiar distinction is that, purchased in this fashion, it is eagerly bought despite the fact that it never is worth even fifty per cent of what it costs.

This explains, however, why the selling of money is such a profitable business—a profit (net) of one hundred per cent is only a tyro's profit; the experts of 'finance,' through their intensive knowledge of the physiology (as it were) of money and its spore-like system of reproducing itself, do not have a feeling of contentment unless the net return is two hundred or three hundred per cent. In an age like the present one, of huge trade expansion and vast sums of credit, the operations in money are of staggering magnitude.

The interest rate which the public hears about, or which the borrower signs up for, is delusive. How reasonable to most ears is the sound of such 'low' interest rates as five, six, or seven per cent? One must comprehend what usury really means, how vermin-like is the reproductive capacity of these 'small' charges.

One must understand, in short, that money plus interest grows by geometrical progression. It multiplies so swiftly indeed that the recent international loan made to Belgium of $100,000,000 will attain the monstrous size of $523,150,000 at its maturity thirty years hence—that is the price the people of Belgium, most of them yet unborn, will pay for an 'accommodation' to them by a consortium of banks of $94,000,000—for that is the actual sum which they got and which they must repay within thirty years with an amount equal to more than 523 millions! The rate of interest, by the way, is *only* seven per cent.

Is there anything higher priced than money? Is it strange that manufacturers, industrialists, and executives at the head of fields of production find it so difficult if not impossible to lower the cost of their products or to sell them to the public at steadily diminishing prices as the volume of output grows, when it is considered that there is a first and primary charge on nearly all industries of a cumulative and geometrically increasing charge for the money they use? Is it strange that a few great industries not so cramped by the incubus of usury are able to put forth their products at a steadily decreasing cost?

The study of money is deemed by the public at large to be 'too complicated to go into.' Money is thought to have a mysterious nature, that it should be 'left to experts' and to 'financiers.' *The fundamental question of what constitutes the real worth of money when bought and sold is almost never raised.* Apparently it is one of the most urgent problems before us today as individuals and as citizens, still it is one of the least seriously inquired into by those who pay the price. General public knowledge of this subject might mean a public saving in the future of possibly one-half of what it now costs to make public loans, besides preventing to some extent the further encroachments on human rights now being daily consummated. It is a situation which contains some gross features. Information about the 'physiology' of money alone will show some facts which ought to be more generally known; solutions will suggest themselves when the subject is better understood. Knowledge is power!

It is not intended here to treat the subject in its manifold phases or as an abstruse economic problem rivaling in

abstraction those of Euclid, but merely to look into a single phase which is interesting enough in itself, that is to say, '*Why* should money be the highest-priced thing in the world, the peak-price commodity, and this no matter who buys it, individuals, states or nations?'

THE late case of the Belgian loan has been cited as an example of the swollen figure which money may take on. Dealing in lesser sums and at varying interest rates it may be stated, in a nutshell, that the price of $20 in the open market *averages* at $57.68! When bought of course as it always must be, on a deferred-payment plan. The price of this $20 in fact ranges between $42.08, the low figure (at four per cent), and $76.32, the high ordinary level (at eight per cent). The figure stated above as an *average* or $57.68 is at the rate of six per cent, which it will be conceded is a normal level; money seldom costs less than this, and more often is higher.

For purposes of illustration the figures given here are based on twenty-year bonds using rates of four to eight per cent. It may thus be shown for instance that $100 costs the borrower $210.40 for this period, at four per cent. This includes the resultant loss of interest to the borrower—that is to say it is a gain of the lender—on the *annual payments of the regular interest.* On this basis a loan of $100 costs, at six per cent, in twenty years, $288.40 when the same mode of calculating is used; and so on upward to an eight-per-cent loan of $100 (not an unusual charge), the price the borrower pays being $381.60. But how many people take thought of this?

AND whenever there is a discount from the face value of the loan or bond issue—as was the case with the loan to Belgium, from the par value of which was deducted $6,000,000—or where a 'bonus' is paid to obtain a loan—or when, as is common in second-mortgage practice, the borrower frequently suffers a twenty-per-cent deduction from the face value—this entails a further cost to him, and through certain necessary sequences of compoundings the price which he pays is greatly increased over even the enormous figures already cited. But for the sake of simplifying, these minute further details are not introduced into the calculations appearing here. In other words, the prices given are to be considered as the minimum—money may cost the borrower anything more, but in all probability never less.

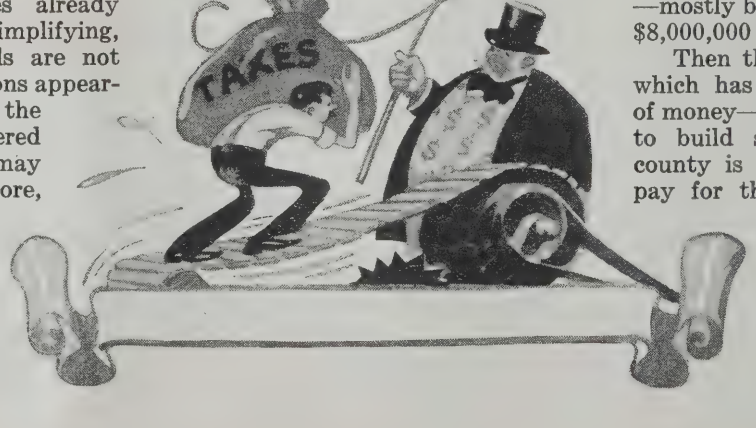
It becomes evident, then, that every business which goes into the market for money, and every individual or municipality or county or school district, every road commission, every state government, all of these, have paid and are now paying and must continue to pay through the years to come, for the roads and schools and drainage systems, waterworks, street paving, and court-houses and public buildings, for their levees and dikes—everything that has been built on money obtained by bond issues—more than the richest can afford to pay, so much more, indeed, that they cannot much longer go on at the present rate of their obligations. To continue means ultimately that the people of such communities must, as the terse French put it, 'pay through the nose.'

For it is easy to calculate on sure disaster when it is seen that this money, for which our local political subdivisions are indebted in *billions* of dollars, must be repaid at the rate of practically $288.40 on public bonds and at the rate of $333.10 on private loans for every $100 that was borrowed.

CERTAINLY a system so costly should justify some inquiry into its parts. An investigation of this kind is pertinent to the best interests of the public, and may be productive of results highly profitable to those who 'buy' money. By learning some of the niceties of usury, a method may be devised whereby money might be 'bought' at much lower prices—before borrowing money one should *borrow some of the wisdom of the lenders.* The present discussion is part of an effort to swing open one of the secret doors—only one!—in Bluebeard's house of usury—that there may be seen the bodies of past and dead civilizations and what killed them . . .

A certain public bridge project is to cost $2,000,000, which is obtained by the usual method, a bond issue, in this case at what is called a fairly *low* rate, five per cent. That bridge will cost in the twenty years which the issue is to run, exclusive of maintenance, $4,950,000. That is the sum which the public, the taxpayers served by this utility, must repay for the $2,000,000 now borrowed.

A large public utility corporation



lately decided to issue bonds f $8,000,000, on top of its existing bonde indebtedness. There was no dissentin voice raised, by stockholders, th public (which comprises the custome who must eventually pay), the loc press or the state regulatory com mission which passes on all such pr posals.

THIS sum of money in twenty yea will attain the swollen dimensions $23,000,000. This is the sum which th company must take out of earnin and profits, out of stockholders' share out of its customers' pockets—merel to pay for an $8,000,000 loan. Is strange then that power and light rat cannot well be reduced, the price gas lowered, or transit fares reduce despite a volume of demand multiplie several fold? At times it would see as if those in control of great corpor tions, industries and utilities, were direct conspiracy with the mone interests to make such periodical bo rowings, repeated in innumerable i stances all over the country, purely the interests of the controlling banker for each such loan means stupendou profits to those who supply the fund It would seem that some public utiliti and corporations were established an conducted for this special purpose their main object; and to thus pla battledore and shuttlecock with th money furnished them by their mar thousands of stockholders and co tributed freely by the public; and tha *running a public utility* or *an indust was a side line,* something incidental the real business of giving opportuniti to the money powers to draw the lif blood out of the enormous funds of th public which are or ought to be co sidered in the nature of a trust fund.

BUT, as in the case of the great com pany in question, the proposed additio to its debt, this mortgaging of i stockholder's property, this bleeding a utility belonging to the publi called forth no word in objectio Nothing was said by people or press because as a matter of fact it is doubtf if either has caught any hint of th peculiar sin involved in this bit finance, common to modern time whereby $23,000,000 is to be paid ou —mostly by the public—for the presen $8,000,000 issue.

Then there is the case of a count which has recently 'bought' $200,00 of money—by issuing bonds of course to build some rural schools. Th county is actually obligating itself t pay for this sum of money—on th installment plan—a tota price exceeding $500,00 It behooves somebody, should think, to rise an ask, 'How come?' But o the contrary the peopl voted (*Continued on page 2*

The Backstage Story *of the* MARION TALLEY *Drama*

By WILLIAM L. STIDGER

A LITTLE curly-haired, eleven-year-old girl sang seven years ago at the City Club in Kansas City. Her name was Marion Talley. She received two ollars for singing her song, and ran all ie way home with it clutched in her st; bolting into the house she cried, ook, mother, what I've got! Look hat I've got!' And both mother and aughter wept and laughed over that vo dollars.

Last spring this same girl, now neteen years of age, sang to two apacity audiences at Convention Hall Kansas City, these two concerts etting her more than $20,000, more an half of which was given as a fund educate promising singers. And ven after crowding six thousand ersons on two successive evenings to Convention Hall, thousands were rned away.

Between the two events which iese two paragraphs picture, some-ing had happened. Most of it appened, so to speak, 'backstage.' Vhat has happened on the stage of Iarion Talley's life in those seven ears has been a matter of newspaper ories, but I wished to know what ad been going on 'backstage.'

To get the story, I interviewed age hands, scene shifters, property ien, chaperons, staid Kansas City usiness men, Marion Talley's first usic teachers, and the men and omen who first recognized her genius.

I have tried to set the story down st as it happened. I had read and eard so much that was impossible and ntrue about this girl that I had be-ome suspicious of the whole affair. fter I had come to Kansas City and ad heard her sing, I knew that the cts themselves were enough; that ie simple 'backstage' story was stranger an fiction, and more alluring than ny *Sleeping Beauty*, *Alice in Wonder-nd*, or *Cinderella* of the imagination.

I had just arrived in Kansas City. had no favorites on which to bet and o ax to grind. I was merely a curious eporter trying to ascertain facts.

These were the things I wanted to now:

Was she a real singer of the Jenny ind type, a phenomenal find?

Was it a circus-exploiting scheme hat got her where she was?

Was she as simple and childlike as the newspaper accounts pictured her?

What was the real inside story of her sudden spurt to fame?

On November 3, 1922, Marion Talley went to New York City, and before leaving she wanted to say good-by to all her mid-western friends. The Kansas City *Star* over its radio gave her the chance. On her way to the depot to catch her train, she stopped at the *Star* office and this is what she said:

'Dear Home Folks, I am both glad and sorry that I am going away from you. Glad of the chance you have given me to go, but sorry to leave the place I love. Will you keep a place for me in your hearts until I return to sing for you again?

'Before I go, I want to sing a song for all of my friends.'

Then she sang 'The Kiss' and 'Home Sweet Home.'

I HAVE talked with many people who heard those two songs. There were tears that night, and love, from thousands of hearts as the child singer went East out of the prairies to sing the songs she had learned from the wide reaches of her native heath.

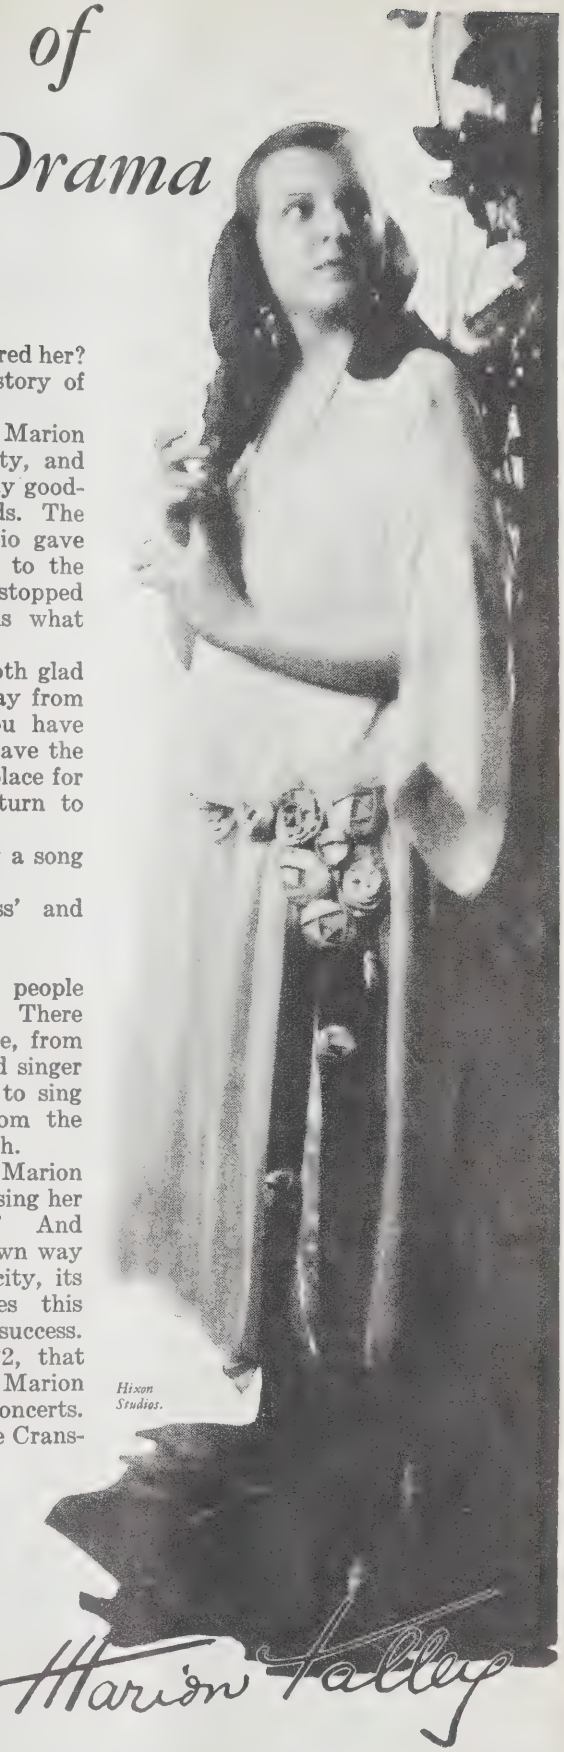
That farewell sums up Marion Talley. She was a little girl kissing her friends goodby in 'The Kiss.' And 'Home Sweet Home' was her own way of saying farewell. Its simplicity, its sincerity, its affection, makes this farewell a symbol of her success.

It was back in May, 1922, that Kansas City first heard of Marion Talley. She sang in church concerts. She was 'taking lessons from the Cranstons,' as Kansas City people say, for the Cranston School of Music is one of the institutions of this mid-western city. The Cranstons each year run a series of grand operas in the spring. Marion sang that year in *Mignon*.

Blanche Ledderman, a correspondent for *Musical America*, said to Mrs. Minna K. Powell, musical editor of the Kansas City *Star*, 'We have a little girl whom we think is unusual.'

When Mrs. Powell heard Marion sing, she too felt that the girl was a genius. But it was the production of *Mignon* by the Cranstons which awakened all Kansas City to the fact that the Midwest had produced another Jenny Lind.

A short time after this debut in *Mignon*, J. A. Harzfeld, a Kansas City lawyer who has always been interested in promoting things (*Continued on page 24*)



Hixon Studios.

MORALITY *That Was* First Military

Army Commanders *Long Ago Discovered* Principles *Now Claimed by* Pacifists

By CAPT. ELBRIDGE COLBY

JUST out of civil life a young lieutenant in the army was taking a course of study in a garrison school, designed to acquaint him with the rules of land warfare and the restrictions imposed on forces in the field as to the means and methods of waging war. As he conned the little cloth-covered book issued by the military authorities, he was perplexed.

'Why!' said he, 'this thing is all in our favor. It tells how the nations have agreed to things that work out all right for us.'

That is the first impression he obtained from the beginning pages of the document, pages devoted to the rights of belligerents and the special privileges accorded them. A soldier in the army is a belligerent. A Red Cross nurse, a newspaper correspondent properly accredited, a welfare worker, a militiaman in uniform and belonging to an organization, even massed citizens properly called out for spontaneous defense—these are all entitled to the privilege of being taken prisoners of war.

It was a military practice to forbid pillage before it got into any of the law books or was nicely written out on treaty parchment by diplomats.

It is a game, a contest, for which you must be eligible, like the high school lad who can play on the team. They have the right to be taken prisoner—instead of being shot as spies or hanged as free-lance snipers. Take the German aviators who came down in Russian fields, after Russia had threatened to hang as spies all reconnoitering plane drivers caught in their territory. Those aviators wore uniforms, and were entitled to be held as prisoners of war, to be fed and housed and clothed, and to draw pay after the fracas was over.

Now suppose you were playing a football game against a rival college. Would it not be to your advantage, also, to know that your enemies would be all in the same color of uniform, and that no one would be active on the field in civilian clothes? The referee is dressed in other togs. You'll not mistake him for an end, swinging at an angle across the gridiron to take a forward pass deep in your territory. So the insistence upon the rights of belligerents and the duty of belligerents to wear the uniform and to be properly accredited representatives of their side actually accrue to the advantage of the fighters. They make the game plain and easier to play according to the rules.

However, the young lieutenant had another surprise in store for him. He read how you should cripple the enemy by every means in your power—but you should not poison his wells, or violate his flag of truce. He read further how you might levy contributions or make requisitions for food or forage—but you should not let your troops pillage. Shades of those who 'fought the war for souvenirs'!

But the real truth of the matter is that the restrictions on pillage are actually beneficial to the soldiers on campaign. From time immemorial the best troops have been those that did not pillage for private gain. Even in ancient days, when private property was seized for the benefit of the conquering state, the Romans insisted that all 'booty' be turned in to a common hoard, which was converted into cash and thus equally distributed, part to the state and part to the troopers.

The vast majority of the laws of war, and especially that one which forbids private pillage, prevent the anger of the moment from leading troops into excesses, the unrestrained exercise of which would interfere with the strength of the army as a unit. Take General Grant's first battle, that at Belmont, November 7, 1861, where after capturing the Confederate camp, the Union troops were so busy seizing 'souvenirs' that they became completely disorganized and had to run helter-skelter to their boats when a few enemy reënforcements came up.

Take an incident of Andrew Jackson's campaign against the Creek Indians, when Colonel Caller and Mississippi volunteers conquered the redskins at Burntcorn Creek July 27, 1813, and then got so muddled up looting the strong hold and appropriating the best horses that the same Creeks were able to organize again and hand eventual defeat to the broken ranks of the raw militia.

An army is powerful only while it is under the control of its commanders. Pillage by one's own men may sever that control as effectively as overwhelming enemy force. It is sound military sense to say, as does Admiral Rodgers of these rules: 'Toward one's own organized forces, these restrictives promote discipline and efficiency.'

In countrysides that are the scenes of military operations, both friendly and hostile inhabitants are constantly in fear. Property is often deserted. People are impressed with the vigor and compelling power of armed men. Pillage seems easy. But the fact remains that those in authority desire to suppress it. They have a sense of military responsibility. They realize the necessity for discipline. They know they must keep their commands in hand at all times. They actively enforce within their own commands the international rules of warfare regarding pillage. Their reasons for

doing so are not idealistic nor sentimental. They have probably forgotten all about such-and-such a 'convention' signed by this power and that and adhered to by these and those. Their reasons are practical and military. The habit of looting, once commenced, disrupts units and disturbs orderly procedure toward the essential end—the correct and efficient conduct of military operations.

Back in the 18th Century, that great French publicist Vattel remarked that officers extend themselves to suppress pillage and looting; and his remarks have been frequently quoted. But we all know the internationalists have condemned such ever since the sack of Magdeburg. That is well known. But is the attitude of the troop commanders so well known? Does it come with as much of a surprise to the casual person as it did to the young lieutenant learning the truth for the first time from a military angle?

A lieutenant general of the British army in 1744 drew up a course of standing rules for the redcoats in which he said: 'Strict orders must be given to forbid all straggling, marauding or plundering the Country, on Pain of the severest *corporal punishment;* or if that will not do, even of Death.' In the same year, the regulations for the Prussian infantry said: 'Officers commanding parties sent to villages for straw must take all possible care to prevent the men from plundering, or quitting their posts; they must also, according to directions already given, bring them all back to camp.'

A MILITARY manual written by an officer and published in Dublin in 1756 under the title *The Cadet,* being instructions to new subalterns, declared: 'You must not permit your Soldiers to break their Ranks or Order, to run after Cattle or Plunder of any Kind, as perhaps it may be a Scheme of the Enemy to entice your Men to disperse themselves and so become an easy Conquest.'

There are countless instances of such instructions issued to field forces in general, and to specific troops in particular. It was a military need, this establishment of the ban on pillage. It prevented unnecessary waste of the country on which the army might have to live, and it kept the troops under good control at all times. It was a military practice to forbid pillage before it got into any of the law books, or was nicely written out on treaty parchment by diplomats around polished conference tables.

In 1863, the United States issued its famous 'General Order Number One Hundred' which consisted of instructions for the conduct of its armed forces in the field, and which has become the model for similar later models and instructions. In 1907 The Hague agreements banned pillage and got the nations of the world to issue like instructions to their armies. The ban against pillage existed first as a military rule. Then by custom and agreement, it became a part of international law. Its purpose was not, and is not, humanitarian, but simply utilitarian. Witness the words of Braxton Bragg entering Tennessee on July 21, 1862:

> Commanders especially and officers of all grades are earnestly called on to enforce discipline, secure good order, and prevent straggling. No delays must occur by the wayside from tardiness on the part of troops. The high reputation this army has made for itself must not be sacrificed for petty personal gratifications; its efficiency must be preserved in order that it may strike the enemy effectively and decisively.

It is so easy and so patriotic to believe that American troops are always perfect, and always have been perfect, that we must realize the truth perhaps with a bit of a shock when we find ourselves at fault. It is a fact that Americans have been at fault in this regard. The fact is, too, that American armies have been largely citizen armies. When Shafter took the Fifth Corps to Santiago in 1898, with only three regiments of volunteers and twenty-four regiments of regulars, it was practically the only time in our history that our standing army was in the majority in the field force. On almost all other occasions, in expeditions of any magnitude, there have been a vast number of relatively untrained and only partially disciplined volunteers.

For the observance of rules, troops must be highly disciplined as were those British troops who marched into Washington in 1814, did the specific damage to governmental offices for which they came, and marched out. With raw soldiers it is impossible not to find among them large numbers of 'souvenir hunters.' Rules are bound to be broken, the rules of war as well as the minor military rules of ordinary discipline. Consequently we can find many instances of misbehaviour on this score in the history of American armed forces.

INDEED, if you will turn back in your history books to the days of the American Revolution, and get detailed accounts, you will find instances of infractions of this sort at the very beginning of our national life. In July, 1776, the Declaration of Independence was signed. It recited the misdeeds of a British king and the oppressions practised on inhabitants by his troops. And yet, only three months later, General Washington in September of the same year was found writing the following:

> Of late a practice prevails of the most alarming nature, and which will, if it cannot be checked, prove fatal both to the country and the army. I mean the infamous practice of plundering . . . I have with some others used my utmost endeavors to stop this horrid practice, but under the present lust after plunder, and want of laws to punish offenders, I might as well attempt to move Mt. Atlas. I have ordered instant corporal punishment upon every man who passes our lines, or is seen, with plunder, that the offenders may be punished for disobedience of orders; and I enclose to you the proceedings of a court-martial held upon an officer, who with a party of men had robbed a house a little beyond our lines of a number of valuable goods; among which (to show that nothing escaped) were four large pier looking-glasses, women's clothes, and other articles which one could think would be of no earthly use to him. He was met by a Major of Brigade, who ordered him to return the goods, as taken contrary to orders; which he not only refused to do, but drew up his party and swore he would defend them at the hazard of his life; on which I ordered him to be arrested and tried for plundering, disobedience of orders, and mutiny. For the result I refer to the proceedings of the court, whose judgment appeared so exceedingly extraordinary that I ordered a reconsideration of the matter; upon which and with the assistance of fresh evidence, they made a shift to cashier him.

And there were still others among these excellent forefathers of the present-day patriots who misbehaved in the same way. On August 20, 1780, General Nathaniel Green wrote to Washington as follows:

> There have been committed some of the most horrible acts of plunder by some of the Pennsylvania Line that have disgraced the American arms during the war. The instances of plunder and violence are equal to anything committed by the Hessians.
>
> Two soldiers were taken that were out upon the business, both of which fired upon the inhabitants to prevent their giving intelligence. I think it would be a good effect to hang one of these fellows in the face of the troops, without the form of a trial. It is absolutely necessary to give a check to the licentious spirit, which increases amazingly. The impudence of the soldiers is intolerable. A party plundered a house yesterday in sight of a number of officers, and even threatened the officers if they offered to interfere. It is the opinion of most of the officers that it is absolutely necessary for the good of the service that one of these fellows should be made an example of, and if your Excellency will give permission, I will have one hung up this afternoon when the army are ready to march by.

The same day, the Commander-in-Chief replied to Greene:

'I entirely approve of the prompt punishment which you propose to have inflicted upon the culprits in question.'

We have, not the phrases of a French writer on international law, not merely the suggestions of European commanders, but the acts and example of that staunch and strong general, who became our first President, to indicate that it is the desire of the military man, not the things in the books, a soldierly purpose, not a simple humane sentiment, which should be understood as the real reason why plunder and pillage are suppressed in efficient and well-handled armies, the Prussians carrying clocks out of Alsace in 1871 to the contrary notwithstanding.

Where the People of the BRITISH ISLES Came From

By ALBERT ERNEST JENKS
Illustrated by GERALD VAN DER HEYDEN
Copyright, 1927, by A. E. JENKS

IN PREHISTORIC times while the now British Isles were still a part of the mainland of Europe, much of Europe was peopled by mankind. The parts of the continent where life was most easily sustained were first inhabited. The skulls of those first Europeans were long, the forehead low and retreating, the bones thick and heavy, and, together with the bestial jaw, they tell the story that their possessors were very primitive types of man. Their stone weapons and utensils, many of which have been discovered, were so crude that some scientists believe their users had neither the mentality nor the manual dexterity purposely to shape them. They appear to have been picked up for use as Nature shaped them in her tool shop of torrential streams and crushing weight of heaving rocks. Some of them became better shaped in being used.

It may have been 250,000 years ago when the first inhabitants lived their lonely life in what is now Britain. Those crude men increased in numbers. The glowing coals of intelligence grew warmer during the passing millenniums until the people reached that stage of stone culture where they shaped implements for definite uses.

Gradually the surging bordering waters cut a pathway through the soft chalk lands; the white cliffs of Dover stood asunder from those of Calais, and the British Isles were separated from the mainland.

Much later, somewhere to the east of the Mediterranean Sea, a human nest sent swarm after swarm of restless sons and daughters along both the north and south coasts of the Mediterranean. Those along the south shore are still survived by their descendants, the Berbers of North Africa. Some of those along the north shore passed westward across Spain, France and the Lowlands. Probably it was about 10,000 years ago that they crossed the English Channel. They were long-headed men, white but undoubtedly of the darker type. They passed everywhere over the British Isles. They were greatly superior to the men they conquered there, because, though their weapons were still made of stone, they had domestic animals and agriculture, so that their food supply was relatively abundant and safe.

The exodus of peoples to the British Isles through the centuries.

These people were of the Mediterranean race and are known as Iberians. They gave their name to Spain and Portugal, as the Iberian Peninsula. Today they are represented by the small dark individuals among the Spanish, French, Welsh, Irish, and Scottish. So persistent have their physical characteristics been, that many people have noted the likeness between the darker inhabitants of Spain and Ireland. John Hay, in his *Castilian Days*, says of the peasants in Spain: 'You can see these same faces at Donny-brook Fair. These large-mouthed, short-nosed, rosy-cheeked peasant girls are called Dolores and Catalina but they might be called Bridget and Kathleen.'

FOR 3,000 or 4,000 years, like a moat surrounding a medieval castle, the encircling seas protected the British Isles from further conquest. Then the first great Celtic invasion deluged the shores, swept over the lands, and subdued the natives—as tidal waves devastate a lowland. The Celts were a part of the Alpine race, who had poured westward over what is now Germany, Holland, Belgium and Northern France. Some remained on the Continent. The southern Belgians or Walloons and the Bretons of France are at base Celtic, with certain Germanic blood. Those Celts, the Gauls, were tall, broad-headed men with fair skin and hair, and probably gray eyes. They were followed to Great Britain in later years by other Celts, the Brythons—who fixed their name on the British Isles.

Those blond Celtic tribes intermarried with the dark-skinned natives, and the amalgamation seems to have produced, among others, the red-haired type of Irish in Southern Ireland. The tools and weapons of the Celts were of bronze instead of stone. The invaders were superior to the islanders in body, mind, weapons, and the methods of warfare. Again for 3,000 or 4,000 years the insular position of Great Britain was a barrier against invasion and an obstacle against retreat.

The heathen Vikings were called 'Wolves of the Sea.'

In time every distinct environment shapes and claims its own sons and daughters. Its own it favors, or, rather, those it favors become its own. Until fifty-five years before the birth of Christ, without a new invasion from the Continent, Great Britain selected from among those born to her only those who obeyed her. Hard the remnants of those four distinctive peoples

The Germanic tribes swarmed across the English Channel, spread everywhere over the British Isles and conquered most of the area.

ressed each other. Harder and with ss pity, however, the environment ressed them all.

Then Caesar came. In the year 5 B. C. he found the Britishers tend- ıg flocks, growing grain, dwelling in illages, governed by kings, buying and elling with coins of gold, fighting from ıtrenchments and forts, and cutting own their enemies with scythes slash- ıg from revolving chariot wheels. 'here were story-tellers and musicians, eligious priests (the Druids) who held xed forms of worship, and there were ıur chief sacred days—out of which ave grown our May Day, Midsummer ve, Hallowe'en and New Year's Day.

AT THE end of 465 years from aesar's first arrival in Britain, the omans withdrew, though they left ıuch of Roman blood and Roman cul- ıre. They were not driven out, but were alled away. The Romans are the only eople who have ever retreated from ıe Islands. All others who went there ave been absorbed. Always the ıother environment searched for her ue sons and daughters among her tters. Those she licked, not gently, ıto shape. Others she nosed aside, or ashed across the throat. Her own she andled roughly, though she fed them bundantly.

Forty-nine years after the Romans etired, the first wave of the eventual ıundation by pure Teutonic tribes ıpped the southeast coast of England. ıbout 400 B. C. navigators from the hen civilized world upon the Medi- erranean had sailed along the northern eas, and reported the existence of a new race of barbarians between the Vistula and the Rhine. These peoples are known to history as the Germanic tribes. The typical member of the Germanic race has always been fair of skin, with blue eyes and light hair. He is tall and has a dolichocephalic or long head.

From those blond giants of the north a prolific race sprang. It early overflowed its Baltic Sea nest and planted colonies broadcast. Horde after horde of dauntless warriors plunged southward across the Alps and pressed in fierce barbaric fury upon the then center of the world's culture, Rome, which they conquered in 445. By 476 Genseric, the Germanic Vandal, was acknowledged lord of the whole western Mediterranean Sea.

The Germanic tribes swarmed also across the English Channel, spread everywhere over the British Isles and conquered most of the area. They fixed the name of one of their dominant tribes upon England, as Angleland, and fixed the dual name of their two strongest tribes on the resulting people, the Anglo-Saxons.

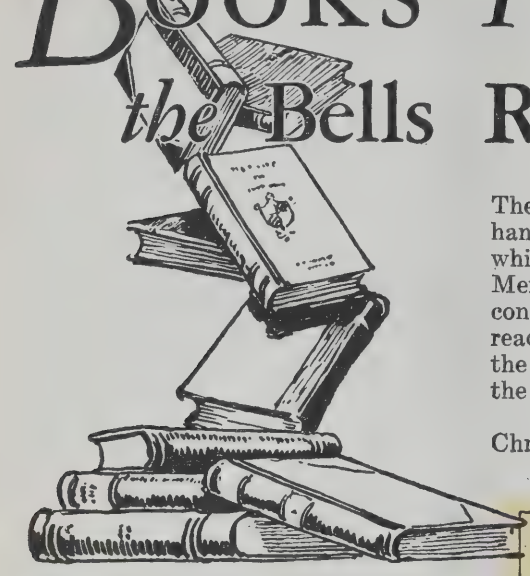
The Jutes are said to be the first of those Germanic tribes to come to England in 449. They came from what is still called Jutland, the northern part of the peninsula of Denmark. Within thirty years the first of their cousins, the Angles, came. They also came from the Danish peninsula, from what is now Schleswig-Holstein. A district of Schleswig still retains the name 'Angeln' or 'Engleland.'

Within twelve years more the first of the Saxons arrived. They came from the northern part of Germany, near the foot of the Danish peninsula. In England they slipped in south of the Angles and spread up west of them. They were so dominant that Freeman says: 'Wessex (founded in 519 by Cedric, the West Saxon) has grown into England, England into Great Britain, Great Britain into the United Kingdom, and the United Kingdom into the British Empire.' Every prince who has ruled Britain before and since the 11th Century has blood of Cedric, that West Saxon, in his veins.

FOR 350 years following 449 the Teutonic Anglo-Saxons flowed over Britain and conquered it. By the year 600 they controlled substantially all of Britain east of what is now the Cornish peninsula and Wales. The remainder of the British Isles was peopled by the earlier Iberian-Celtic Britishers. The dominant light-skinned conquerors with their war clubs hammered this darker Britisher into submission or his grave, or drove him, sullen and unconquered, into the back mountain land. There, as Irish, Welsh, and Scottish, with a more or less unconquered spirit, he has throughout history waged a war by sword or protest against those dominant tribesmen whose force has fixed the name of 'Anglo-Saxon' for 1,500 years on the sons of Britain, no matter where in the broad world they have settled by conquest.

As always, the glaring eyes of the mother, Environment, watched her broods of young. Her harsh tongue still ruthlessly rasped (*Continued on page 29*)

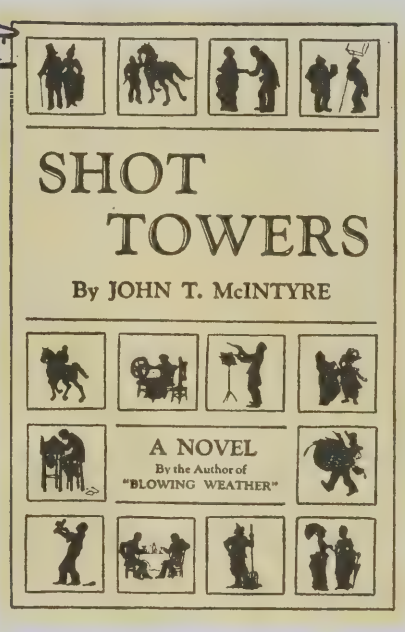
Books That Start the Bells Ringing



WHEN I find a book that starts the bells ringing in me, I like to pass it on. Particularly when it is a book of which I hear little or nothing from the regular reviewers. I am neither a book reviewer nor a critic. If the whole damning truth must come out, I am merely one of that multitude who know what they like. I am a reader—always a hopeful reader in spite of the mountains of printed chaff through which I have waded. When I find a real book, it is an event in my life. And I am pretty lucky in finding such a book every little while, because I go hunting for it. Some of my luck I like modestly to recall to myself. I found Archibald Marshall before William Lyon Phelps did. But, unlike William Lyon Phelps, I did not know it was a find. I simply got hold of Marshall one day—his *The Greatest of These*—which I think is still the greatest of Marshall's—and I had devoured the books that had preceded it—a lot of them—when to my great joy, Professor Phelps began to tell America about Marshall. I think there lurked in me a tendency to despise the printed judgments of most critics previous to that time, but now that I note in them a growing agreement with many of my own private and timid judgments upon books, their aspect has become more pleasant.

It is great excitement to discover a writer who has been going on a long time under cover, producing many works unnoticed, because then you can go back and gorge yourself on the new flavor, gain in one unbroken orgy of reading a complete view of the author's mind—its formation, how it grew. Happy the reader, for example, who comes upon Leonard Merrick, as I did. It was *Conrad in Quest of His Youth*—and there were twelve other volumes waiting to tell me the mind of Merrick. The wealthy supply was already on hand to satisfy the imperious demand which my desires made for more of Merrick. I wish more writers could contrive to have at least a dozen books ready for immediate consumption when the thirteenth reveals their quality to the world.

I wished it particularly just after Christmas. You know, I buy the books



which I read. They are not sent to me by kind publishers. I go among the bookstores. If more people who know what books are coming from the presses would go to the bookstores, it would greatly increase the booksellers' information and probably educate their judgment. Which is perhaps an unkind remark in view of what I am about to relate.

Rummaging through the apoplectic mass of colored-cover 'blurbs'—Chinese devils that really belie many a good book—I saw a yellow wrapper, which in turn concealed a well-bound volume of 414 pages, published by Stokes, and I noticed that the price was two dollars and fifty cents. Well, it is too much for many books sold at the price, but not too much for a good book. I'm for book readers being book buyers, and I am glad we are becoming educated to pay fair prices for good books.

Whatever it was, *Shot Towers* made an appeal to me. Maybe it was the weather that blew out upon me from the first page—'It was Saturday night in the winter weather, and the snow was falling; a prowling, bitter wind was in the streets; drifts were piling against dormer windows, chimney stacks were turning into slim, high towers . . . Sleighs had appeared in the afternoon; they were light and strong with swift lines; their gleaming runners curved upward, and recurved into the gilded necks and heads of swans. The horses blew jets of steam from their nostrils; the people behind them wore fur caps and were wrapped in rugs and buffalo robes . . . The portals of taverns swung cheerily; game hung from hooks by the doorposts —grouse, rabbits, turkeys partly stripped of their burnished feathers; small pigs hung by the heels, each with an apple in its mouth.' I looked in at the market sheds, I followed Mrs. Carey in to buy her Sunday joint. That was page three. I said, 'I'll take this.' And that night I found a man who could write, and who had a story to tell. I found strength, knowledge, atmosphere, power, charm, reticence that interpreted more than blatant unreserve can ever do—I found *Shot Towers* a novel I could recommend to all my friends and give copies of to the most dissimilar people assured that it could not possibly go wrong. There is weather in all its moods, true weather that wafts its several gales of odors; there are deep tangled human motives, characters that do not live merely in the book but are seen livingly through the book as through a strong clear glass—so many characters, quickly and intimately known—in short, the elements of life are in a story that, like a personality, leaves its flavor where it passes.

I wish I knew a real critic well enough to take the book to him and say, 'Here is a book that has greatly impressed me. Will not you evaluate it, analyze it for me?' We take flowers to our botanical friends to have them tell us what they are, and rocks to our geological friends—I wish it were possible to take books in the same way to the genuine critics. It is important to me to know why I was impressed by *Shot Towers*, and I think it is important to know how to estimate the promise of John T. McIntyre's gift, so that we may rightly gauge our expectations from him for the future.

I had never heard of him before. I had hoped that, like Marshall and Merrick, I should find a whole shelf of things he had done. But I found only one, and that in the Grosset and Dunlap reprint series; *Blowing Weather*—seventy-five cents, I think—a story of (Continued on page 22)

More About the Signs of the Times

LAST week this Page gave a few general remarks on the signs of the times. These signs exist, they are legible, they are guideposts by which the observant may know the road. Nature gives previous notice of coming changes; the roots of the tree have news of Spring by a subtle wireless before less sensitive observers are aware. Human nature also, by invisible writing, notifies all of growth and change; the innermost personality of men has its own delicate wireless which gives advance information, but its voice is usually drowned out by noisier surface notes. Human society also has its system of signs, in politics and economics, all of which can be clearly read by those who look for them.

If we knew these signs in ordinary things, just the common daily affairs, it would be of much benefit. An engine gives signs of needed care, and so does the body. If we fuel the motor in the wrong way, the performance of the engines quickly notifies us; the same is true of the fueling of the body. Directly a wrong course is entered upon, signals begin to wave, and if our perception is what it ought to be, we see these signals; if our wisdom is what it ought to be, we act upon them.

The affairs of our people in general would be greatly benefited if our business men were better readers of the signs of the times. *To be a business man is to assume the responsibility of economic leadership.* Read that again, please, and consider it. When a man undertakes a business in his community, he virtually says: 'I am taking upon myself part of the direction of your economic life, just as the physician takes upon himself part of the direction of your health, and the schoolmaster part of the direction of your children, and the minister of religion part of the direction of your attitude toward spiritual realities.'

Now, if the physician acted upon the principle of urging upon his people every medical vagary, if the schoolmaster supplied the frivolities more than the necessities, if the clergyman were to make confusion, extravagance and irresponsibility the end of his business, everyone would feel that these men were debasing their professions. It is exactly the same when the business man does these things. He has more opportunity to do harm than anyone else, because his contact with the people is constant, while that of the others is occasional.

> *BUSINESS men do not think of themselves as leaders of social movements, but they are. Not a single system of business exists, good or bad, but has been taught to the people by business men. They have more influence on society than politicians, schoolmasters or clergymen, because their contact is constant and their influence unavoidable. Every bad habit of unthrift and debt is taught the people by their business guides. This leadership should turn round and head in the opposite direction. Business men should be readers of the signs of the times to warn the people to wise action and safe building on sound foundations.*

It is, therefore, part of the business man's duty to his community to read the signs of the times that he may be a good and helpful leader of his people in their economic interests. He has no more right to mislead them, to lure them into wrong practices, than has the clergyman.

As it is, however, local business men are the agents on whom the inventors of wrong economic practices depend for their popularization and spread. No wrong economic practice, no disastrous system of doing business could possibly get a foothold except through the local business man.

There is no question at all that so-called 'periods of extravagance' on the part of the people originate outside the people; they originate in the minds of those who wish to speed up the people's spending of their earnings. There is no dangerous business practice in existence today that was not deliberately taught to the people, forced upon the people, by men who had no thought of the general social benefit.

If the people find themselves buried in debt, with every dollar of the pay envelope mortgaged for some 'installment,' it is because they have been taught it by business men. Teaching and leading the people to *invest* wisely, to begin getting things that make their lives more productive of real values, is one thing. Teaching them to forget their natural abhorrence of debt, leading them to forgo their independence by working for a small army of installment collectors, is quite another thing. If the careful, thrifty, constructive attitude of the average family toward their economic responsibilities and possibilities has been lowered, it is the result of systematic education by a certain type of business system.

Now, when these things begin to appear and to flourish, the wise man sees a sign of coming danger and prepares for it. Systems wrongly based cannot succeed, they must fail, and the colossal extent of everything we do here in America brings the failure earlier and makes it harder than it would otherwise be. The self-limited business can weather any gale, but vast edifices built on a gamble in the people's extravagance collapse at once.

People who can see the signs of the times begin their own reformation. Those who are in places of leadership lend their good counsel. If the signs are observed in time, the situation is saved, and we have gained some experience which will prevent a repetition of the mistake.

Sauce for the Gander?

THE McNary-Haugen Bill was vetoed. It requires no genius to understand the reasons for it. But if the McNary-Haugen Bill, why not also the McFadden Bank Bill? Why does one interest get turned down, while another interest wins out? Why, of two interests which are strong enough to get through the House and the Senate, is only one strong enough to have a chance of 'getting by' the White House—and that one the bankers!

Taking the problem at its basic values, there can be no doubt that any method of creating an artificial prosperity for one class, is doomed to fail. And any system that tries to maintain an *artificial poverty* for one class, is equally doomed to fail. We believe that the McNary-Haugen Bill was supported because its sponsors promised that it would create prosperity for the farmer. So did Aaron Sapiro with his unworkable coöperative scheme. The fact that this Bill would not give prosperity to the farmers was known to most of those who voted for it—it doesn't reach as far as the farmer—it doesn't touch the core of the trouble. The President is a farmer and knows that.

The nation as a whole believes the principle that no class can be made prosperous by law at the expense of another class—it is wrong—it is futile—it is the worst kind of politics. Seen in the glass *held up to the farmers* all this is perfectly clear.

Why is it not equally clear in the mirror held up to the bankers?

Here is a private government concession, heavily subsidized by many privileges, charging for its commodity the highest rate that any commodity is sold for, a towering super-control in business and politics—here is this thing, coming in the plenitude of its power to ask for still *more* privileges, still *more* ascendancy over industry, still *more* control of business, and the extension of all these perpetually—

Is it any wonder that supporters of the McNary-Haugen Bill wonder how the McFadden people did it?

Is it any wonder that opponents of the McNary-Haugen Bill wonder where the consistency comes in?

Why is not sauce for the McFadden goose also sauce for the McNary-Haugen gander?

Is It Matrimony?

JUDGE BEN LINDSEY of Denver condemns present-day marriage ideas as inadequate and declares that America must legalize some form of 'trial marriage' to combat this state of things.

It is not present-day marriage but the 'contracting parties' who prove inadequate by regarding marriage too lightly. With a large number of couples, matrimony is regarded as a joke, an occasion for throwing about showers of rice and old shoes, a bond which two lawyers, or even one, moderately compensated, can easily break.

Apparently few persons know what the word 'matrimony' means. It is of Latin derivation and means 'motherhood.' Unfortunately motherhood is at a discount with many who enter wedlock in these very 'modern' times.

Marriage is truly a sacrament, and is felt to be such by those who are truly married, not in the exclusively ecclesiastical sense only, but because its influence, its obligations, its purpose have a truly sacramental significance for life.

Madame's Cigaret

THE woman cigaret smoker got away to a rather bad start in the advertisements. Those who know what is on foot have scrutinized recent cigaret ads with unusual interest. Not long ago the smoking scenes of the advertisements portrayed men only. It probably will remain that way in the domain of pipe-smoking ads. But in cigaret ads the women have been edging closer and closer to the smoke. Nice dainty young things are seen praising the aroma or delicately lighting 'his' fag. Advertising generals have been slowly advancing to the time when they dare print on the billboards and in the newspapers full-fledged appeals to women to smoke, with nifty pictures of women smokers. It makes an interesting study in the way the professionals think that the American mind works, or can be worked.

Then came the first smash—Madame Schumann-Heink was quoted far and wide as recommending a cheap but popular cigaret because, as she is reported to have said, 'they are kind to my throat.' It seemed for once that Madame had made a false note. We have not quite reached the point in our emancipation where men recommend cigarets to boys or women to girls. But it all cleared up nicely when we read in the newspaper that *Madame denied the testimonial* or whatever it was.

Back Yards

WITH the passing of the spring thaws the average back yard presents an appearance highly undesirable. The snow beneath the shrubbery is no longer white as it was early in winter. A drab, gray, greasy soot has stained its pristine whiteness. Much fog is in the air. Voices are plainly heard many blocks away. The racing of a motor roars out across from the neighbor's garage, punctuated by the sharp report of the backfire. Near the alley fence is an indiscriminate accumulation of everything a householder discards in winter. Faint tinges of green show through the dirt. Here is a discarded doll, a Christmas toy once wound with a key and operated by a spring, now broken, rusted, and full of ice. The neighbor's dog has made the base of the lilac bush a cache for his bones. A

wooden clothespin, a dingy golf ball, a mousetrap and an empty medicine bottle huddle disconsolately together under the back gate. The sooner the back yard accumulation is done away with the sooner will it be safe for the children to play in the open. Disease germs lurk in the sodden remains of wadded papers, pasteboard boxes and tin cans. Fire and the ragman make the back yard safe for all.

Saving the Presidency

IN THE main the country likes a conservative President. At times, Presidents have seemed to be radicals, but when analyzed they are seen to have been conservatives with vision added, or with action added. Sometimes the admixture of a little activity with conservatism gives the impression that a man is a progressive. Sometimes the admixture of mere self-protective prudence stirs a man to keep step with his generation, and thereby achieve a reputation for energy and insight.

So, if the secret wish of the nation were disclosed as regards the sort of President it would like to have, the lineaments would run something like this: a conservative man with enough mental activity to maintain motion, and regulated speed to prevent his falling too far behind or bounding too far in front of the people. A conservative-progressive; a man with courage and caution; a man who can both look and leap, but in their proper order; a President and not a politician.

Turning back the pages of this paper we came upon pleas—it seems a long time ago—written for the eye of a President of the United States, begging him to disentangle himself from the forces which were surely wrapping him about. The pleas were unheeded. Presidents fall into these nets from various motives—from motives of friendship, or because of weakness, or from motives of self-protection. A President may think he owes something to his friends. They are not his friends if they lead him to think so. A President taking office is like a man assuming matrimony—forsaking all others he shall cleave unto the service of his country, and of her only, as long as his office shall last. The President's only friend, master, judge, is the Nation. A President may be convinced that, alone, he will fail; that the men surrounding him are necessary to the strength of his administration; he may know them to be representative of forces which oppress the people and live for business and gain alone, but he may justify himself with the belief that these men have great capacity for service to the country and, besides, they tell him what to do in fields where he is ignorant. This is understandable. It has occurred in this country time and again, and with every occurrence *the Presidency has sunk down a degree* in public estimation. The Presidency as an office shines with glory only in those periods when Presidents make bold to be Presidents, and not mere nominal heads of cabinets.

So it is curious to think that the next plea to be raised to Presidents in this country may be a plea to *save the Presidency*. And the only way this can be done is by the incumbent of that office being the President. The federal form of government is being challenged in many of our municipalities where the Mayor is being superseded by the Commission. The change came because Mayors ceased to be Mayors. When Presidents cease to be Presidents the Constitution is nullified as otherwise it could never be. When a citizen refuses to let a Negro vote, or when a citizen violates the 18th Amendment, the Constitution is disregarded and disobeyed and dishonored. But when *a President refuses to be President* the whole Constitution lies drained of life. It is a mighty serious matter.

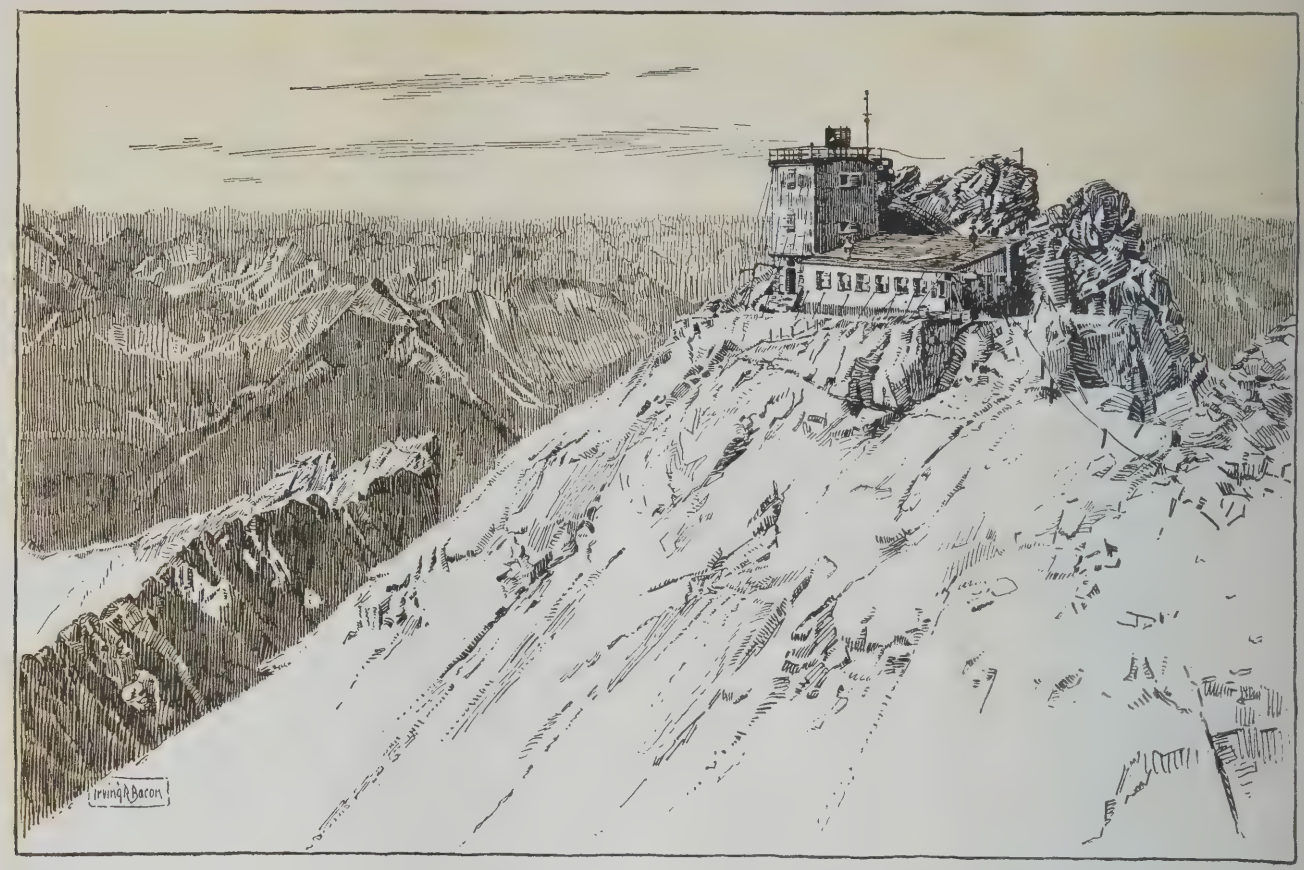
Again, Chicago

CHICAGO invites analysis through the nomination of 'Big Bill' Thompson as Republican candidate for mayor. In the face of such problems as lawlessness, municipal reorganization, traction and clean government, Thompson based his campaign on George V of England. 'I want to make the King of England keep his blasted snout out of America,' he shouted from various platforms. Just where the royal proboscis has been protruded in this country, he does not explain. But perhaps no explanation is needed from one with his war record. In addition he promised not to interfere with saloons and not to arrest 'decent citizens for minor infractions of the dry laws'; and he approved a wide-open town. Chicago Republicans nominated him with a vote of almost two to one over his nearest opponent. What this indicates as to 'Chicago Republicans' is a question. Does 'Big Bill' typify Chicago? Does he typify Republicans? For eight years, from 1915 to 1923, he held the office of mayor and in turn astounded and vexed the country at large by his actions. But apparently these actions were satisfactory to Chicagoans, or at least to a majority of Chicago Republicans. The Democrats have nominated able Mayor Dever, whose administration has been as constructive as any in the past generation. The Nation would do well to withhold final judgment on Chicago until after the election in April.

27,000,000 Pupils

THE miserable attempt of misleading newspapers to create the impression that a 'wave' of imitative suicide exists among the school pupils of the United States, is on a par with the fake stories that started the nation talking about the 'poison needle,' which did not exist. Journalistic irresponsibility is reaching a height in this country which will certainly precipitate a reaction which will surprise it. No class is so little informed of the tendencies that are working beneath the surface of American life as are the daily journalists. The day's 'accident' measures the extent of their knowledge. But there are forces at work which, in Dr. Little's expressive phrase, are likely at any moment to send us tumbling straight back to realities. And these forces will not take their rise nor be guided nor even influenced by the press, when they ripen into action.

It is worth knowing that there are 27,389,170 students of every variety, and 1,000,000 teachers, in the schools of the United States, most of whom, it is reasonable to infer, are not yet affected by the 'suicide wave.'



The meteorological station and 'Munchener Haus' surmounting the peak of the Zugspitze.

Skiing *in the* Bavarian *Alps*

By IRVING R. BACON

Illustrated by the AUTHOR

ON A clear day, in Munich, capital of Bavaria, one will notice, far to the southward, the blue ridges of mountains banked up across the horizon. Down among these mountains, and quite close to the Austrian border, where the valley widens out in a sort of amphitheater at the confluence of the Loisach with the Partnach, are two picturesque villages. Garmisch, with its quaint, frescoed houses, lies well out on the flat center of the valley; but Partenkirchen clings to the mountainside a few kilometers to the east.

This beautiful region has long been the playground of the German people. During the winter, the *Sportzplatz* on *Kochel Berg* presents an animated scene of ski-jumping, skating and coasting, and in the summer, inns, famous for good dinners, tempt the visitor.

Farther up, in the more inaccessible parts of the mountains, are located *Alpenverein* cabins for the shelter and comfort of this society's adventurous members, each of whom is provided with a key, for inside are stove, fuel, bunks, blankets, mattresses and cooking utensils.

The greatest lure, for tourists in this region, however, is the scaling of the Zugspitze, lofty and steep, and providing so many thrills that those who have conquered this noble mountain are justly proud of the fact. All summer long it is besieged by mountain climbers who spend the night on its peak in the *Munchener Haus*, where good food and drinks may be procured, and beds for fifty-five persons. As an added attraction, there is also the great meteorological station in the form of a tower in charge of a government attendant.

In December of the year 1914, when the trails were snowed over and the Zugspitze cut off from the world for the remainder of the winter, there still remained on its forbidding summit one Dr. Zinstler, keeper of the meteorological station. Here he remained, buffeted by the bitter gales, through the long winter months, busying himself with delicate recording instruments and telephoning daily weather reports that his country might be informed of changes and impending storms.

As spring approached, this man yearned to look upon a human face again; he craved fresh meat, and, more than anything else, the privilege of reading the back numbers of the newspapers to learn what had been happening in that great tragedy, the World War. But Dr. Zinstler was not forgotten, for he had many friends, one of whom, Professor Zintmeister, of Munich, had organized a small party, including Dr. Jaeger, Herr Multerer, and myself, for the purpose of reaching Dr. Zinstler as soon as the weather would permit.

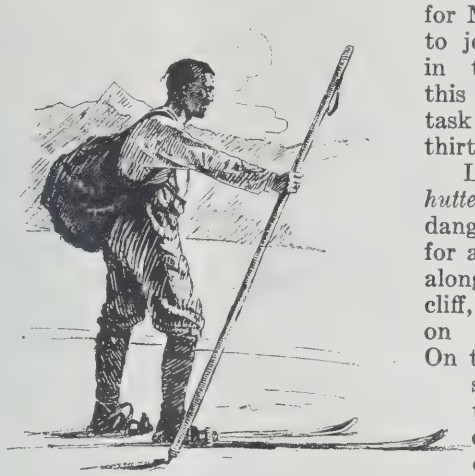
On the morning of April 4, 1915, we met at Kainsenbad, equipped with skis, three days' provisions, vacuum bottles, cooking utensils, alcohol stove and cameras, besides twenty rolls of newspapers. Including skis and clothing, my load amounted to about seventy pounds.

Our first climb was through the dangerous Partnachklamm where the footway, a narrow ledge cut in the face of the cliff, was so covered with smooth ice that we crawled on all fours over the worst places. Giant icicles and tons of ice had formed on the heights above the river that rushes through this chasm. Crossing the bridge at the fork of the Partnach, we followed up the right branch of the river until we came to Rheinthallerbauernhof, five or six kilometers distant, where we stopped for lunch and rest.

We became so overheated packing our heavy loads that Multerer, Jaegar and I peeled off our clothing down to our undershirts, while Zintmeister

stripped to the skin above the waist. In this manner we proceeded on our skis, following a well-defined trail of snowshoes and skis through the forest and along the brink of a chasm until we came to another cabin.

Here the scenery was charming. Great wads of snow balanced on the tops of the small firs and bulged over the boulders in the stream in fantastic fashion.



Dr. Zinstler of the meteorological station.

Soon ahead of us loomed the upper *Rheinthal*, that ominous narrow valley, hemmed in by menacing mountains from the towering heights of which avalanches of snow roar down without warning, carrying with them everything in their path and ending in grotesque formations of incredible depth, intermingled with dirt and rocks and trees.

It was rough and precarious going, climbing over twelve of these giant obstacles. On getting past the last avalanche, Zintmeister went ahead to make a fire in the *Angenhutte*.

As we watched him climb, in serpentine fashion, the steep mountainside or *Hang*, behind which lay the cabin, Jaeger remarked what a strong chap he was and that he owed his physique to marrying young and going to bed early. Jaeger, who was slender, possessed plenty of endurance himself, for it was he who initiated me into this exhilarating sport of ski touring.

Before reaching the cabin, we passed a large inn, closed for the winter, which in summertime becomes so popular that it takes on the aspects of a beer garden.

At the *Angenhutte*, which was almost buried in snow, we found two men; one a strapping young *Jaeger* in Alpine costume who was about to depart for the Zugspitze. His shoes becoming too tight on the way up, he took them off and reached here barefoot. Fortunately he found a wooden-soled pair in the cabin, and putting these on without socks and with bare knees, he started off on snowshoes. It was nearly five o'clock and he had agreed to deliver his load of meat to the Zugspitze that night, then return to Partenkirchen and catch the morning train for Munich, where he was to join the army at two in the afternoon. For this seemingly impossible task he was to receive thirty-five marks.

Leaving the *Angenhutte* behind, we passed a dangerous *Hang*, famous for avalanches, then skied along a ridge under a cliff, past which we skirted on a precipitous drop. On this narrow margin of snow that hung at a threatening angle, we experienced a difficult climb. We now encountered skiers and people afoot descending. A man and girl, who had discarded their snowshoes, were sinking to the hips at each step; and then a skier paused with a grin to inform us that the worst was still ahead. But we climbed on higher and higher, until we entered the clouds and, later, a snowstorm.

Zintmeister and I now forged ahead, passing the young *Jaeger* who had taken off his snowshoes and was floundering up the steep mountainside with his load of meat. It was almost dark when we reached the *Knoorhutte*, evidently a large double building, but so buried in snow that only a portion of the front stuck out. The only means of entrance was through a second-story window, for the door was completely covered. Feeling our way downstairs, a crack of light was discovered.

PUSHING open the door, we found a dimly lighted room, crammed full of people. From the ceiling, above the stove, hung clusters of shoes, stockings, mittens, ski-fells and leggings, filling the room with vapor. It was a weird scene, comparable to a crowded ship cabin or a lumber-camp interior. Most of the faces visible, which were terribly sunburned and smeared with grease, glowed an unbelievable red in the yellow lamplight. These people had removed their coats and shoes and were wearing *Pantoffeln*—felt toe slippers, provided by the cabin. Some were cooking at the stove, others eating, and many lounging around puffing on short pipes. Although the air was thick and stuffy, its warmth was very acceptable.

After making room to dump our *Rucksacks* and putting away our skis in the hall racks, we busied ourselves cooking steak and melting snow for tea. By the time Jaeger and Multerer showed up, supper was ready; but instead of sitting down to it, on seeing the crowd, my companions all deserted me to search for blankets and bunks. Bunk or no bunk, I refused to desert that fine, juicy beefsteak.

When it was time to retire, we made our way by candlelight to the cold, damp room set aside for sleeping quarters. The double-decker bunks were built with head toward the inner wall. Kicking off my wet shoes, I rolled up in two blankets to shiver through a sleepless night.

Our party was the first up in the morning. As soon as it was light, we discovered that the mountains were enveloped in clouds and a snowstorm was raging. Such conditions made the trip to the Zugspitze impossible. We dried our shoes and clothing and waxed our skis. When the snow stopped, we started for the Sneefernerkopf, the finest ski mountain in the

The Zugspitze, the highest mountain in Germany.

More than five hundred cosmeticians practise various rites and ceremonies for thirty-odd million Americans.

PAID—*A* Billion Dollars *for* BEAUTY

Sleuths *of* Science *Still on the* Trail *of* Elixir *of* Youth

By EDNA M. COLMAN

THE beauty craze like an epidemic has swept the land and created a billion-dollar industry, for Uncle Sam's sons and daughters are determined to be beautiful at any price.

Although the human family has pursued the search for beauty and youth since the beginning of time, the quest has never been so universal, so determined, so thorough in all details, nor so costly as in the last decade. In that period beauty culture has developed from a minor adjunct to barber shops and hairdressing establishments to a first place in the business world with more than five hundred thousand men and women cosmeticians practising its various rites and ceremonies to meet the demand of thirty-odd million Americans who cheerfully pay a fee of six million dollars daily.

The craze for youthful attractions finds recruits from every age and class. Threescore and ten, in a steadily increasing procession, forgo the traditional chimney-corner ease to enlist in the crusade for rejuvenation.

Men and women of middle age vie with one another in orgies of massage and the uncertainties of hair dye and endure agonies of facial surgery, diet and exercise, in their desperate struggle to prevent Father Time scoring up their years with his telltale age symbols on faces and forms.

The gay little flapper and the blasé young sheik, with their buoyant youth shrieking a challenge to age and a tolerant, admiring world, despite their possession of the choicest gifts of the gods, spend large portions of their pay checks for garish artificial tints of skin and hair and acquire a tawdry glitter and polish that satisfies their desire to be in accord with the modes of the hour.

It is, of course, conceded that American women far outnumbered the men in the lavish expenditure of money and time before short hair became the fashion, but with 'bobs' and 're-bobs' running into and exceeding $300,000,000 yearly, making the barber beauticians rival the bootleggers in their profits, the men had small chance to even up the expense score in behalf of the restoration and preservation of their manly charms without reverting to the elaborate dress of the Elizabethan period with its costly wigs and ruffles. However, last year it is estimated that the men of the United States spent more than $750,000,000 in the barber shops where a large portion of this money went for hair tonics and dyes, which proves that they too have succumbed to the lure of the beauty cult.

During 1925 the devotees of the youth and beauty quest demanded the production of lotions, creams, rouges, powders, tonics, et cetera, to the amount of $141,488,000. When the toiletries of foreign make and those manufactured in the privacy of the home bathroom are added, the magnitude of the entire cosmetic bill runs beyond the point of lucid calculation.

Of the domestic manufacture, the Department of Commerce recently gave the following summary for the year 1925 and the information that the increase in the last two years has been at the rate of nineteen per cent:

Creams, rouges, et cetera	$ 34,178,000
Dentifrices	25,496,000
Talcum and other toilet powders	21,423,000
Perfumery and toilet waters	20,544,000
Hair tonics	9,480,000
Hair dyes	1,616,000
Other cosmetics and toilet preparations	20,694,000
Perfumery, cosmetics and toilet preparations not reported by class or kind	8,037,000
Total	$141,468,000

With about eight thousand varieties of cosmetics now in use and more being concocted daily, a year's census of permanent waves totaling $150,000,000, and an annual sale of 25,000,000 boxes of rouge and 60,000,000 packages or boxes of powder, no one will dispute that America is rapidly outdoing all races and ages in her toilet-table extravagances.

When it is remembered that America spends $57,950,000 for her yearly supply of toys and sporting goods, $24,000,000 for the fountain pen and approximately $314,009,000 for its billion and a half pounds of imported coffee, the size of the collective beauty bill assumes impressive figures in dollars and cents.

So universal has become the effort

to obliterate blemishes of nature and ravages of time that beauty culture has been established as a profession. Several states have decreed that at least six months of study covering 720 hours must be the minimum education for the applicant to qualify for a permit or license as a beautician. Of these Illinois has issued more than fifteen thousand. Other states have favored the introduction of a course of instruction in beauty culture as an addition to their vocational training for girls in the public schools. All such recognition of the 'beauty shoppe' and its operators, most of whom now have to pay a license fee, has promoted the cult to a growing and lucrative industry.

Mothers, to be quite successful, should be taken for sisters of their daughters.

The struggle to obtain more youthful appearance is not wholly due to vanity. In many cases women who continue in business through middle life, and women who find themselves obliged to seek wage-earning positions after youth has left them, claim that it is necessary to conceal as many traces of their real age as possible in order to hold their positions. Gray locks must be dyed, bobbed and permanently marceled, and sagged and wrinkled flesh lifted, so that the woman of fifty may not look above forty, if that, and mothers, to be quite successful according to the present-day standard, should be taken for the sisters of their daughters.

Gertrude Atherton, Galli-Curci, Mary Garden, Dr. Copeland, Walter Camp, Susanna Cocroft, and scores of other prophets of health-and-beauty culture, are doing their best to teach the world's aging men and women the same old story, in a new way—the story of generations bound to the wheel of ceaseless effort to stay the ruthless hand of time from branding faces and forms with its disfiguring signs.

The fashionable beauty specialist of today, enshrined in his elaborate and exotic laboratory, is not the votary of a new art, but only the modern disciple of one of the oldest cults of ancient times.

Invention and modern progress in science have aided him in a degree that has given him a vast advantage over his professional progenitor of the Middle Ages.

Now, the clever dermatologists are artists in theory and practice. They may alter the skin garment of the matron—fat, forty plus, and would-be fair—to the specifications of the slender maid of twenty, while the ample 'extra stouts' may be pruned, perspired, and provisioned systematically until they attain a 'perfect thirty-six.' Many and devious are the roads of discomfort the weary patient must traverse. Much of this 'reduction' may be done by simple tailoring methods. With knife and scissors, the skilled surgeon lifts out folds, flaps and overlaps of unlovely fat and with his delicate needle takes tucks and pleats in the offending physiognomy. He may even make seams (not always afterward invisible) in the necks and faces of his willing victims, to meet their great desire for Time's unwelcome traces to be obliterated. While the surgeon transforms too abundant curves into lines by a combination of all processes, his knife and scissors cannot restore the youthful tints and sparkle to faded eyes that have looked deep into the wells of experience, nor can they wipe away the marks of weary sophistication from the soul.

The miracle workers in surgery but prove again that there is nothing really new under the sun, since just as there were telephones and water works in Rome in Nero's day, so various processes of rejuvenation were practised long before the birth of Christ.

The expert surgeon of today may slip unawares upon the hapless goats and monkeys and summarily rob them of sections of their anatomy, after the method so comprehensively described by Mrs. Atherton, and while he transfers them to mortals whose purses match their desires, he is merely demonstrating in a new way the old idea that was prevalent and in practice in China and India for the nobility twenty centuries ago.

Although the learned men of ancient Egypt had a surprising knowledge of medicine and the human anatomy, the gland method of restoring youthful energy to the aging was not practised by them, or if it was, it was a royal secret not yet disclosed in the translations of their tablets, papyri, or the hieroglyphics in their pyramids and tombs.

The first alchemists chose as the goal toward which their earliest labors were directed the concoction of a medicine which should be a panacea for all the ills of the flesh. This was to produce universal and perpetual health, which in turn would insure perpetual youth.

Failing after countless efforts to discover a chemical which would by dosing induce unfailing health, the energies of the ancient (*Continued on page 23*)

Beauty's power stands forth in every age.

BENJAMIN FRANKLIN As an Abolitionist

By ALICE MAC FARLAND

IT WAS in the early days of his partnership with Hugh Meredith, at the 'new Printing Office near the Market,' that Benjamin Franklin first manifested his interest in the subject of slavery—an interest which endured throughout his entire life, and with which his last official act and his final contribution to literature were directly concerned.

The printing of forty pages of a Quaker history was obtained for the new firm through the influence of Joseph Breitnal, an engraver and a member of the Junto, that club which Franklin formed and to which he alludes as 'the best school of philosophy, morality and politics that then existed in the provinces.' As the sum agreed upon for doing this work was very small, Franklin set himself the task of printing one page a day, and often kept the lights of the printing office aglow as late as eleven o'clock at night, having met with interruptions throughout the day in the form of 'little jobbs' brought in by other friends. People had begun to contrast 'the industry of that Franklin' with the shiftlessness of Meredith, who went reeling about the streets of Philadelphia, never completely sober, and often very thoroughly drunk.

ONE of the 'little jobbs' which interrupted the progress of the Quaker history was a treatise on the evils of slave keeping, called 'A Brief Examination of the Practise of the Times,' by Ralph Sandiford, one of the pioneers of the workers against slavery in America. It was dangerous, at that time, to express any criticism of the practice of slaveholding, and Franklin, with a worldly wisdom which even at the age of twenty-two characterized his actions, withheld his name from the title-page of the book, the author assuming all responsibility. A few days after its appearance, a copy fell into the hands of the chief magistrate of the province, who threatened the author with prosecution if he continued to circulate it; but the conviction of justice overruling fear, Sandiford continued to spread his doctrine, and distributed copies of the book gratuitously, wherever he thought it would be read. It went into a second edition.

Wedgwood Cameo.

Years later, in a letter to John Wright, Franklin proclaimed himself the printer, and now the little brochure is eagerly sought by collectors of Franklin imprints, long after the cause it was written to aid has been disposed of, and the name of Sandiford, who gave his life for it, is practically forgotten. The copy I had the privilege of examining, the title-page of which is here reproduced, is one of a very few copies known to be in existence. In fact, there is not a copy even in the Library of Congress.

Because of the similarity of their views on the slave question, and because they both professed the Quaker faith, Benjamin Lay and Sandiford must have met and become friends soon after Lay's arrival in Philadelphia in 1731. Certain it is that between that time and Sandiford's death in 1733, he introduced Benjamin Lay to Franklin, and thus further advanced the cause of his heart.

If you can imagine the Nibelungen 'Mime,' brother of Alberich and guardian of young Siegfried, *turned Quaker*, you will achieve a very fair likeness of that extraordinary, eccentric person, Benjamin Lay. He was only four feet seven inches tall he was a hunchback, with very thin legs, and his head was large in proportion to his body. He wore a very long, untrimmed white beard. His wife was also a hunchback, about his own size and in all his beliefs and attempted reforms she was his veritable echo.

Benjamin Lay was born in Colchester, England, of Quaker parentage. Upon leaving England, he went to Barbados as a merchant. There his sympathy for the slaves led him to give them such assistance as he was able. Hundreds of slaves would gather around the dwarfish figure who gave them food, and told them of the hope they had in Christ. So incensed did the owners of the slaves become at his interference that he was finally forced to leave Barbados.

He set sail for the United States and bought a few acres of land about six miles from Philadelphia, between Germantown and the old York road. There he planted a few walnut trees

M,DCC,LXXXVII.

Benjamin Franklin was first president of this society.

and a small orchard, and built a cottage which resembled a cave. The interior of the roof was hung with evergreen boughs. Bookshelves contained his library of two hundred or more volumes of history, biography, theology and poetry, and there Benjamin Lay read and wrote and thought. In 1737 his suggested improvements in the criminal code were made, which were adopted in Pennsylvania, then in other states, and finally resulted in the penitentiary system used all over the world.

Many strange anecdotes concerning him survive. Soon after he moved to Philadelphia, he is said to have killed a hog in a sudden fit of anger, and his remorse was so great that he never ate meat in any form again, nor used any animal product for clothing. He wore an old tow coat of his own spinning.

He kept bees, and honey was one of his principal foods. He was deeply prejudiced against the use of tea, tobacco and spirits, and once he tried to fast for forty days and nights, in expiation for some real or fancied fault—an effort which nearly cost him his life. During one of the early days of his fast, he walked in to see Franklin, probably about the book which Franklin was printing for him.

One day Franklin and Richard Penn, then governor of Pennsylvania, are said to have paid a visit to the cave to see him, and to have stayed to a dinner of fruit and vegetables, of which their host said: 'This is not the kind of fare you have at home, but it is good enough for you and me, and such as it is, you are welcome to it.'

His methods of convincing his fellow Quakers of the evils of slave keeping were so eccentric that they were much like the antics of a naughty but well-meaning gnome, which indeed he must have rather alarmingly resembled. Once, he went to meeting with a bladder filled with blood secreted beneath his topcoat. At his belt he wore a sword. Piercing the bladder dramatically with his sword, and sprinkling with the blood those of his Quaker brothers who were unfortunate enough to be near him, he exclaimed: 'Thus shall God shed the blood of those that enslave their fellow creatures.'

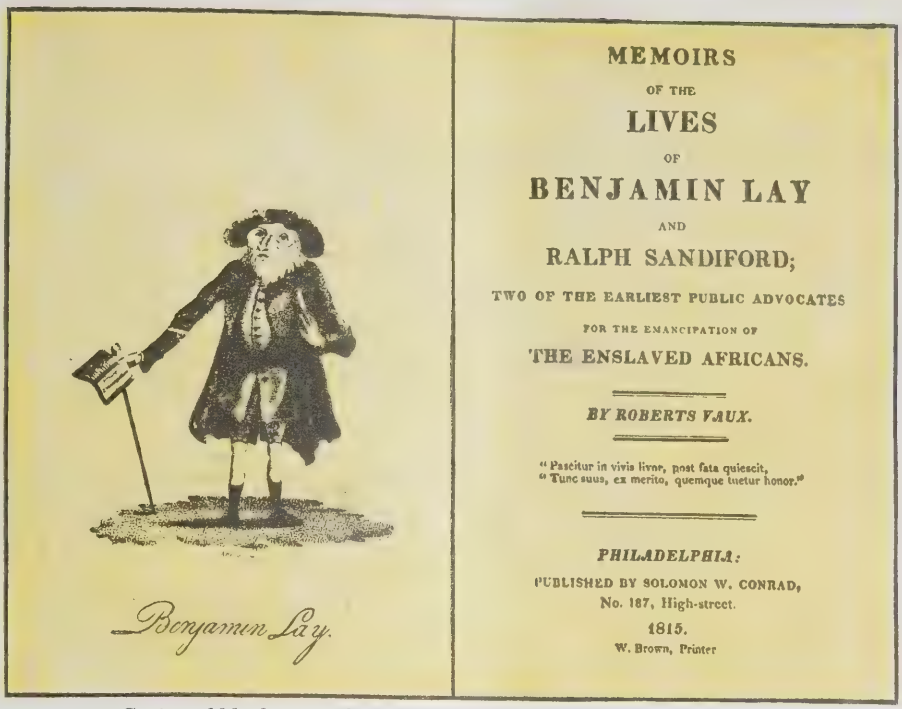
Another time, a beautiful child, well loved in the neighborhood, became lost. The frantic parents, after searching all day, passed Benjamin Lay's dwelling, and seeing the little man at rest beneath his walnut trees, they tearfully told him of their loss. 'Your child is not lost,' he told them; 'he is safe in my cave. Now perhaps you will understand the grief of the parents of that negro girl whom you bought the other day.'

About 1740, he removed from the cave to a neighboring farm, where his wife died soon after. Before his own death, in 1759, a message was brought to him that his long labor in the cause of abolition, particularly among the Quakers, had led to the resolution of the society to disown any of their members who persisted in owning slaves; whereupon he said: 'Thanksgiving and praise be rendered unto the Lord God. I can now die in peace.'

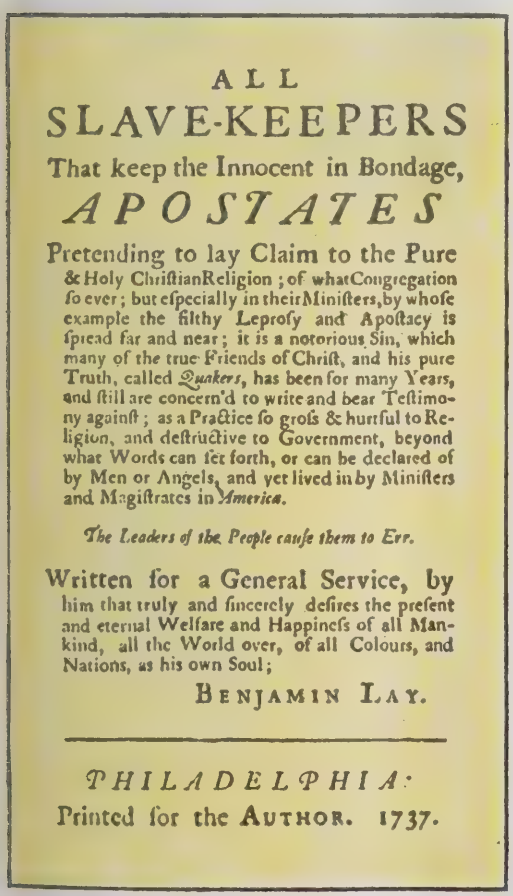
In the year 1737 his book was printed by Benjamin Franklin. *All Slave Keepers that Keep the Innocent in Bondage, Apostates, etc.* is now such a rare book that only four copies are known and the one I examined, of which the title-page is reproduced, is the only uncut copy of which there is any record.

At the time of its publication, Franklin's public life was beginning. He was clerk of the assembly—a position which led to his obtaining many 'profitable jobbs,' such as the printing of paper money, et cetera. He had been married for several years, and had just lost through the smallpox his beloved little son Francis, whom he never ceased to mourn. His newspaper, his *Poor Richard's Almanac*, many achievements which the world now associates with his name, gave him little time to correct the errors in the manuscript of a humble friend—a fact rather pitifully attested by a note at the end of the book which reads: 'Courteous and Friendly Reader, There is some Passages in my book, that are not so well placed as could have been wished; some errors may have escaped the Press, the Printer being much incumbered with other concerns: thou art lovingly intreated to excuse, amend, or censure it as thee pleases. But remember that it was written by one that was a poor common Sailor and an illiterate Man. B. L.'

Among the histories which have touched superficially upon this neglected topic of Franklin's interest in the



Curious old book setting forth the lives and views of fearless abolitionists.



ALL
SLAVE-KEEPERS
That keep the Innocent in Bondage,
APOSTATES
Pretending to lay Claim to the Pure & Holy ChriſtianReligion; of whatCongregation ſo ever; but eſpecially in theirMiniſters, by whoſe example the filthy Leproſy and Apoſtacy is ſpread far and near; it is a notorious Sin, which many of the true Friends of Chriſt, and his pure Truth, called *Quakers*, has been for many Years, and ſtill are concern'd to write and bear Teſtimony againſt; as a Practice ſo groſs & hurtful to Religion, and deſtructive to Government, beyond what Words can ſet forth, or can be declared of by Men or Angels, and yet lived in by Miniſters and Magiſtrates in *America*.
The Leaders of the People cauſe them to Err.

Page of Lay's book, published by B. Franklin in 1737.

slave question, I find the conflicting statements, equally erroneous (1) that Franklin never owned a slave, and (2) that he dealt in them, procuring them from New England and selling them through the advertising columns of his newspaper. The first-mentioned error was made by an ardent partisan during the Civil War period in a collection of articles about Washington, Jefferson, Madison and other Revolutionary heroes who condemned slavery.

A letter to his mother from Franklin, written in 1750, proves that whatever his sympathies, he did own a few negroes. The letter reads, in part:

I shall keep those servants, but the Man not in my own house. I have hired him out to the Man that takes care of my Dutch Printing-Office, who agrees to keep him in Victuals and Clothes, and to pay me a Dollar a Week for his Work. His wife, since that Affair, behaves exceeding well; but we conclude to sell them both the first good Opportunity, for we do not like Negro Servants. We got again about half what we lost.

That he continued to have negro servants, that his son 'Billy,' while living under his father's roof in London, owned slaves, whether Franklin himself did or not at that time, is proved by a letter to his wife, Mrs. Deborah Franklin, written on June 27, 1760, in which he says:

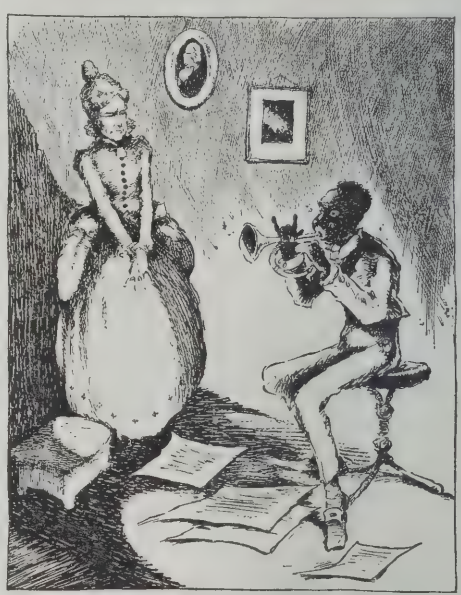
Peter continues with me, and behaves as well as I can expect, in a Country where there are many Occasions of spoiling Servants, if they are ever so good. He has as few Faults as most of them, and I see with only one Eye, and hear only with one Ear, so we rub on pretty comfortably. King, that you enquire after, is not with us. He ran away from our House, near two Years ago, while we were absent in the Country. But was soon found in Suffolk, where he had been taken in the Service of a Lady that was very fond of the merit of making him a Christian, and contributing to his Education and Improvement. As he was of little Use, and often in Mischief, Billy consented to her keeping him while we stay in England. So the Lady sent him to School, had him taught to read and write, to play on the Violin and French Horn, with some other Accomplishments more useful in a Servant. Whether she will finally be willing to part with him, or persuade Billy to sell him to her, I know not. In the meantime, he is no Expence to us . . .

In the same letter to his wife, dated June 27, 1760, Franklin alludes to having been chosen chairman for the current year of a society, an account of whose proceedings he incloses. The organization referred to was known as 'Dr. Bray's Associates.' Dr. Thomas Bray, a philanthropist, formed the association for the management of funds given him by M. D'Allone, of The Hague, for the conversion of negroes in the British plantations. After Dr. Bray's death in 1730, the same trust was executed by a number of gentlemen, of whom Franklin for several years was one.

An Abolitionist knight routing complacent slaveholders.

The last negro servant of whom there is any record of Franklin's having had was a man named Bob, belonging to his son-in-law, Richard Bache. In an unpublished letter from Mr. Bache to his wife, dated July 21, 1789, the following paragraph occurs:

I am afraid it will be impossible for me to make you a visit 'till I have settled my Brother's Bread Business, and when that will be it is difficult now to say: besides I think it would be improper to leave your father in his present situation & the family, to the sole care of a child of eleven years old—your female servants are not to be depended on, and you know what Bob is—a disagreeable circumstance has happened since you left home, which evinces that some of them are not trustworthy; who the culprit is I can't find out, and perhaps never may, but I have my suspicions.



She had him taught to play on the French horn.

Whatever Bob may have been, and whether or not he was the one who merited Mr. Bache's suspicions, Franklin considered him of enough importance to insert a paragraph in his will concerning him. He left to his son-in-law, Richard Bache, certain properties, including a bond he had against him for 2,172 pounds, five shillings, with the request that 'in consideration thereof, he would immediately after my decease manumit and set free his negro man, Bob.'

'To be Sold, A Lusty, young Negro Woman, fit for Country Business, she has had the Smallpox, and Meazles. Enquire of the Printers hereof.' A dozen advertisements similar to the forgoing led another historian to the error previously alluded to—that Franklin dealt in slaves. He says that 'though due to the Friends, there was a very positive sentiment in Philadelphia against slavery, and still more against the buying and selling of men, Franklin had too much New England canniness to regard it, and made many a venture in the purchase and sale of negroes.' An examination of contemporary papers of the period discloses the fact that all of them, including the Pennsylvania *Gazette*, contained innumerable advertisements of negroes, houses and other property to sell, stallions 'at service,' the time of indentured servants, and many other matters, to which were appended the words 'Enquire of the Printer hereof.' It meant just as much, or as little, as our own 'Box No.——' in the newspapers of today, and it would be quite as ridiculous to think that because of that phrase Franklin and his contemporaries dealt in real estate, horse breeding and the slave trade, as it would be to connect the New York *Times* with its 'For Sale' or 'Help Wanted' columns and to accuse the owners of making a profit in the business other than the price of the advertisement.

That Franklin disapproved of slavery from an economic as well as a humanitarian point of view is shown by an excerpt from a paper written in 1751 called 'Observations Concerning the Increase of Mankind, Peopling of Countries, etc.' In it he compares the cost of the labor of workingmen in Britain with that of slaves in America, contending that the latter could not possibly be so cheap. 'Reckon then,' he writes, 'the Interest of the first Purchase of a Slave, the Insurance or Risque on his Life, his Cloathing and Diet, Expences in his Sickness and Loss of Time, Loss by his Neglect of Business (Neglect is natural to the Man who is not to be benefited by his own Care or Diligence), Expence of a Driver to keep him at Work, and his Pilfering from Time to Time, almost every Slave being by Nature a Thief, and compare the whole Amount with the Wages of a Manufacturer of Iron or Wool in England, you will see that Labour is much cheaper there than it ever can be by Negroes here. Why then will Americans purchase Slaves? Because slaves may be kept as long as a Man pleases, or has Occasion for their Labour; while hired Men are continually leaving their masters (often in the midst of his Business) and setting up for themselves.'

There is also ample proof that his belief in the freedom of slaves did not blind him to the immediate material necessity of compensating their owners for their loss. 'Many thousands of slaves and other property to a very great amount have been carried off or destroyed by the enemy,' Franklin wrote to Richard Oswald in 1782. He drew up and signed an article read to the commissioners, asking that

His Britannic Majesty will earnestly recommend his Parliament to provide for and make a compensation to the merchants and shop-keepers of Boston, whose goods and merchandise were seized . . . and to make compensation, also, for the tobacco, rice, indigo and negroes, etc., seized and carried off by his armies under Generals Arnold, Cornwallis & others from the states of Virginia, North and South Carolina and Georgia.

Then, in 'The Retort Courteous' (about 1786), he accuses the king's troops of violating the seventh article of the treaty of peace, which stipulated that no negroes were to be carried away. The reason given for this violation was that the negroes had quit their masters to join the king's troops

because they had been promised their liberty, so the national honor forbade returning them into slavery. 'The national honour was, it seemed, pledged to both parts of a contradiction, and its wisdom, since it could not do it with both, chose to keep faith with its old black, rather than its new white, friends; a circumstance demonstrating clear as daylight, that, in making a present peace, they meditated a future war, and hoped that, though the promised manumission of slaves had not been effectual in the last, in the next it might be more successful; and that, had the negroes been forsaken, no aid could be hereafter expected from those of the colour in a future invasion.'

During one of the debates which took place in Congress, when the great affair of the Declaration was settled, and the business of settling the affairs of union was in hand, a southern member spoke of slaves and sheep as being equally liable to taxation. Slaves rather weaken than strengthen the state,' Dr. Franklin replied, 'and there is, therefore, some difference between them and sheep; sheep will never make any insurrections.'

A number of Franklin's letters referring to the slave question are addressed to Anthony Benezet, a Frenchman who lived for many years in Philadelphia, and who sought to advance the cause of negro freedom. It is to him that he writes from London in 1773: 'I have commenced an Acquaintence with Mr. Granville Sharp, and we shall act in Concert in the Affair of Slavery.'

GRANVILLE SHARP befriended a destitute and abandoned slave whose master later appeared and claimed that he had run away, and thus began a legal dispute which altered the decision that 'masters have property of their slaves even when in England' to the momentous principle, given out by judges after three years of litigation, that 'as soon as any slave sets his foot upon English territory, he becomes free.' This great victory in the struggle for emancipation was due entirely to the efforts of Sharp. In Prince Hoare's *Memoirs of Granville Sharp*, London, 1820, a comprehensive list of his writings on the slave question appears, as well as the record of his association with Franklin, with whom he had considerable correspondence. In a letter to Franklin, dated January 10, 1788, acknowledging his enrollment among the corresponding members of the Pennsylvania Society for the Abolition of Slavery, he says, in part:

'I read, with very particular satisfaction, their excellent remonstrance against slavery, addressed to the late convention.

'When such solemn and unanswerable appeals to the consciences of men, in behalf of humanity and common justice, are disregarded, the crimes of slave dealing and slaveholding become crying sins, which presumptuously invite the Divine retribution! So that it must be highly dangerous to the political existence of any state, thus duly warned against injustice, to afford the least sanction to such enormities by their legislative authority.'

There are so far unexplored treasures to be found by the bibliographer, should he be minded to search for them, in unearthing the records of Dr. Franklin's association and friendship with Josiah Wedgwood, the famous English maker of pottery, who was an ardent advocate of negro freedom. In 1788 Wedgwood made some cameos in cane ware, after a design by Hackwood, for the benefit of the Society for the Abolition of Slavery. The cameos were oval, three and three-quarters inches in height and three and one-quarter inches wide. The cane ware in which they were made, better known as 'pie crust,' and frequently used for making useful articles, was a favorite ware of Wedgwood's. The subject of the cameo is the figure of a kneeling negro whose uplifted, suppliant hands are chained. It is in black relief. Encircling the top, also in black relief, are the words, 'Am I not a Man and a Brother.'

BECAUSE the letter of Wedgwood to Franklin concerning the sending of the cameos, and Franklin's answer acknowledging them are not generally available, even to the student of Franklin, they are here given in their entirety.

Wedgwood writes to Franklin, London, February 29, 1788·

I embrace this opportunity of a packet making up by my friend Mr. Phillips to enclose for the use of Your Excellency and friends, a few Cameos on a subject which I am happy to acquaint you is daily more and more taking possession of men's minds on this side the Atlantic as well as with you. It gives me great pleasure to be embarked on this occasion in the same great and good cause with you, Sir, and I ardently hope for the final completion of our wishes.

This will be an epoch before unknown to the world, and while relief is given to so many of our fellow creatures immediately the object of it, the subject of freedom itself will be more canvassed and better understood in the enlightened nations.

I labor at this moment under a rheumatic headache which has afflicted me some months, and this obliges me to use the hand of my nephew and prevents me also from saying more at present than begging, Sir, to be considered among the number of those who have the highest veneration for your wishes and gratitude for the benefits you have bestowed on Society.

I have the honor to be . . . etc.

Jos. Wedgwood.

Franklin's answer, which is not included in Bigelow's or Smyth's records of his correspondence, follows:

Philadelphia, 15th May 178 (8)

Sir: I received the letter you did me the honor of writing to me on the 29th of February past, with your valuable present of cameos, which I am distributing among my friends: in whose countenances I have seen such marks of being affected by contemplating the figure of the Suppliant (which is admirably executed) that I am persuaded it may have an effect equal to that of the best written pamphlet in procuring favor to these oppressed people. Please to accept my hearty thanks, and believe me to be, with great esteem,

Sir, your most obedient servant,

B. Franklin.

The first formal protest against slaveholding to be made in North America was issued in Pennsylvania by Pastorious and other Quakers in 1688. Benjamin Franklin, in a letter to Wright, alludes to a pamphlet in his possession by George Keith, written in the year 1693, in which the charge was given to Friends that 'they should set their negroes at liberty after some reasonable time of service.' We have seen that the seed was particularly fruitful when sown in Quaker ground, and that Lay, Sandiford and others of that faith labored to make it grow.

Then in 1773 an Indian woman from New Jersey, who went to Philadelphia with her owner, made the statement that she and her children were free. She was befriended by certain citizens who were eager to right injustice, and the case was taken to court, where after two years the woman was declared to be a slave. The case, however, made such a deep impression that it led to the formation of a 'Society for the Relief of Negroes Unlawfully Held in Bondage.' John Baldwin was the president, and the first meeting was held at the old Sun Tavern in Philadelphia, on April 14, 1775. The more immediate problems arising from the Revolutionary struggle necessitated that all other matters be held somewhat in abeyance, and the real activities of the society did not begin until 1787 when, the turmoil having somewhat died down, it reorganized, adopted a new constitution, and elected Benjamin Franklin its first president.

THE greatest work of the society, which in Franklin's time included as its officers such men as Benjamin Rush, Tench Coxe, William Rawle, James Pemberton and Jonathan Penrose, was in assisting free negroes and helping them to maintain their freedom. They were in constant danger of being kidnaped and resold into bondage, or arrested as runaway slaves. The society sometimes paid a master to give liberty to his slave. When he was free, the society took him under its care, found employment for him, opened night schools for him and day schools for his children, and in every way tried to help him in solving the economic and social problems which confronted him and with which he was so ill-fitted to deal. It succeeded, also, in having an act passed in 1780 for the gradual abolition of slaves, but it did not deprive owners of slaves already in their possession, and was so very gradual in process, that there was still a slave in Pennsylvania as late as 1860, although fully half the negroes in that state were free in 1780.

A letter not included in any collection of Franklin's works, which reflects those characteristics the possession of which would unfailingly cause him to espouse any cause which had human happiness as its mainspring, contains the following paragraph—and as it explains the reasons for his interest in slavery more fully than any commentator can do, I quote it, in conclusion:

As to the kindness you spoke of, I wish it could have been of more real service to you: that you would always be ready to serve any other person that may need your assistance, and so let good offices go round: for mankind are all of a family. For my part, when I am employed in serving others, I do not look upon myself as conferring favors, but as paying debts. In my travels and since my settlement, I have received much kindness from men, to whom I shall never have any opportunity of making the least return, and numberless mercies from God, who is infinitely above being benefited by our services. For these kindnesses from men, I can therefore only show my gratitude to God, by a readiness to help his other children and my brethren: for I do not think that thanks and compliments, though repeated weekly, can discharge our real obligations to each other and much less to our Creator.

Intimate Glimpses of ELBERT HUBBARD

By JAMES W. BECKMAN
HIS SECRETARY

Stone chapel in East Aurora is of typical simplicity.

ELBERT HUBBARD used to say: 'When you want to say something and don't want to take the responsibility for it yourself, blame it on a dead man. He can't deny it!'

The most noteworthy instance where he applied this was in connection with the famous mousetrap epigram which he attributed to Emerson. No doubt he was inspired to write it by the desire to put over the fact that because the Roycrofters were doing some things a little differently and better than they were being done anywhere else, people were making pilgrimages to Roycroft from every part of the world. He felt it wouldn't be quite right for him to say it, so looking over the list of possible sponsors he picked Emerson as the most eligible.

Here is the saying, still widely quoted: '*If a man can write a better book, preach a better sermon or make a better mousetrap than his neighbor, though he build his house in the woods the world will make a beaten path to his door.*'

However, as if to set himself right with Emerson before joining him in his 'Little Journey to the Home of Jehovah,' Elbert Hubbard said:

'Ralph Waldo Emerson never wrote that mousetrap crack-out-of-the-box.

'That was a mousetrap that caught a lot of literary mice intent on orphic cheese.

'One thing, trivial, of course, and not worth mentioning—and that is why I write it down—is that the mousetrap guff isn't true.

'No one will make a path to your door nowadays, no matter how good your mousetraps are, unless you advertise them widely and extensively and arrange to have a free lunch at the mousetrap factory, with automobiles to meet all visitors at the railroad station.

'Good mousetrap factories have concrete walks and luring flower beds along the way, where hollyhocks grow lush and lusty. The men who have made the best mousetraps the world has ever seen have usually languished in garrets or were forgotten in the sylvan dales—the tall uncut, showing not a footprint, surrounding them on every side.'

How did Elbert Hubbard learn to write? Often he was asked that question.

'How did I learn to write?' queried Elbert Hubbard. 'I learned to write by writing. The Cadmean game is a great one; just the arrangement of twenty-six letters that compose the alphabet, and the juggling of seven punctuation marks—and there you are!

'The recipe for good writing is this: Write as you feel—but be sure you feel right.

'You learn to write by writing. No one can teach you. It is just like swimming. You keep at it until finally you get the knack. To write well you must have something to say. No one should attempt to write before he has had a great deal of experience in the world and has read a great deal. He should write out of the fullness of his experience.'

Elbert Hubbard's recipe for fame was 'Do something worth writing about or write something worth reading.'

He was the first noted writer to turn to writing advertisements, and a terrible cry arose from some ad-writers in protest. Since that time many prominent authors have written advertisements without protest from any source. Yet, as in so many other instances where Elbert Hubbard broke the precedent, the feeling of censure remained long after the cause had been forgotten.

There was one thing, at least, on which most men were of one mind in regard to Elbert Hubbard. In spite of divergent opinions from adulation to anathema, nearly all agreed that he made people think. He was an inspiration to those who knew or read him. Many a salesman, office man, business man—people in every walk of life—was given renewed inspiration by reading *The Philistine*.

Hubbard inspired a greater number of men to success in a wider range of endeavor probably than any other man of his day. The stories of these would include some of the most distinguished men in America in their fields of activity. After his death I cannot recall how many well-known men who came to East Aurora told me that they obtained their inspiration to start or keep up their efforts from Elbert Hubbard—perhaps from something he had said to them; more often from what he wrote. The last numbers of *The Fra* and *The Philistine* are filled with such incidents, and but allude to countless others.

Elbert Hubbard gave the true secret of success:

'Get your happiness out of your work or you will never know what true happiness is. You cannot get more out of life than you put in it.'

Elbert Hubbard's wit was never asleep. Seldom was he caught off guard. I have heard many people of fame as writers and in other lines tell how they would frame up jokes to catch him off his guard and get a joke on him.

No matter how carefully laid the plans, Hubbard always turned the joke on them. And in argument, it has truly been said that whether right or wrong Elbert Hubbard always won.

Careful attention to detail is observed in dining room at Roycroft Inn.

I have seen Elbert Hubbard deliver a ecture, and when the crowd caught his ests and jokes a little faster than he ex- pected, he kept it up for an hour and a half or more, rocking the audience with laughter.

Elbert Hubbard said that when you ocked others out you locked yourself in. That this was no idle statement was proved by the fact that not until his death were the Roycroft shops locked, day or night! Those who worked in the shops were per- mitted to come Sundays or any other time and make things for themselves, even using Roycroft materials without any charge for them. He always encouraged people to do the good things they liked to do. The girls who worked in the Roycroft shops often made little things of use and beauty for themselves or to present to others.

Sometimes his readers became involved in arguments and sought help from him. In each instance he aided the 'faithful' in their efforts to overcome the foe. One case especially I remember and Elbert Hubbard himself received a lot of enjoyment from it. It happened that a husband was drawn into an argument by his wife who was violently opposed to Hubbard and his ideas. The old proverb that a man cannot defeat a woman in argument was proved in the case of the husband. So in despair he passed it on to Hubbard. Two or three letters were exchanged, the cor- respondent report- ing new angles to the discussion as they arose. Finally the wife dealt a crush- ing blow when she happened upon her spouse reading *The Philistine* in the stable. The stable was the proper place for such things, she declared. In his re- ply, Elbert said to the man at the close:

'Many worth- while things come from the stable. It represents protec- tion, sustenance and shelter. You might remind the good lady that the Saviour Himself was born in a stable, in a manger.' Evidently that held her, for the man wrote that she had no comeback.

Ali Baba was a nickname applied by Elbert Hubbard to a plain workman at East Aurora who has a remarkable faculty for quaint philosophical expressions. The man's real name was Blackman. He was a genuine, splendid character, and Elbert Hubbard had great admiration for his sturdy qualities and brusque speech. This is why you see Ali Baba so frequently quoted in Elbert Hub- bard's writings. Often when he wanted to say something without assuming the re- sponsibility for it himself he laid it to Ali Baba. Some of Ali Baba's best remarks came in banters of wit with workmen about the shop.

He was a little reluctant to speak his mind so plainly when Elbert was around, so to get the quaint gems of repartee that flowed, and sometimes flew, from the lips of Ali Baba, Hubbard would conceal himself and have the men about the place provide the thought provocatives. Then Elbert Hubbard would jot them down and in the next *Philistine* there would be more of 'Ali Baba Says—.'

Ali Baba had always lived in a small town. Elbert Hubbard enjoyed taking him on trips to get his reactions and remarks as a result of his new experiences.

When I made my first trip to New York with Elbert Hubbard, I had the name of a man from Greenwich Village who had visited East Aurora. I told Mr. Hubbard that the man had invited me to look him up when I came to New York.

'You wouldn't be interested in them,' he said. 'There are a few real artists down there; but most of them are nuts and you couldn't stand them. They think they've got it, when they haven't.'

On our first trip down Broadway to- gether, we passed some superlatively dressed women. 'Many a good man,' he said, 'has come to New York with splendid chances of success, until he fell for some of those women.'

Elbert Hubbard lacked but little more than a month of being fifty-nine when he died. Yet he was still a youth who could run and play. The boy's heart, activity and joy of life never abated in him. He believed in work, love, play and laughter.

His ambition was to live to be a hundred, for he said that was the natural thing to do.

He was survived by his father who was ninety-five and his mother who was eighty- seven.

Conceit and bigotry formed little of the make-up of Elbert Hubbard. I have heard people accuse him of both; but they mis- understood him. Those who knew him realized fully that what he said was what he believed and that he never said anything without the mental reservation that he might be wrong. He would say: 'I never claim to be wholly right about anything. At most I only claim to be right fifty-one per cent of the time.'

Many have taken exception to his characteristic manner of saying, 'I think this' or 'I think that,' as an evidence of conceit. The fact is that he inter- posed 'I think' or 'I believe' because of a conscientious modesty. He wanted people to know that what he said was only what he thought. He did not want them to think for a moment that what he said was the last word on the subject. He wished to deceive no one, so he said 'This I believe.'

'Many people,' he remarked, 'think my *Essay on Silence* is the greatest thing I ever wrote.' This is a book of blank pages!

I once said to him: 'It must be a source of great satisfaction to you to think that you started with the worst opposition on all sides and have now built up a successful institution and have people come from all parts of the globe to see you and your achievements and to pay you homage.'

He smiled a kindly recognition of my thought and replied: 'Oh, I haven't time to think about it.' And so it was.

His mind never rested. It left one thing only to take up another. His energy was seemingly inexhaustible. His enemies applied the word commercial to him as an epithet. They did not know that he was primarily a business man. Had he not been, there would have been no Roycroft to admire or to criticize. 'Commerce,' he said, 'has been the world's great civilizer.'

He knew that life was sustained only by production and distribution, and these things he championed.

Many people have regarded him as eccentric. This was a misconception. He wore long hair and flowing tie because he liked them. His business acumen dis- covered that they were an asset, a valuable trade-mark.

People marveled at his capacity for work and his ability to turn out such a vast amount of literature. He found rest in change. He obtained his recreation by a change of occupation. This made it possible for him to work every minute of the sixteen hours that he was awake. He always insisted on eight hours' sleep— and no more. He simply let thoughts flow into his mind and spoke them in an easy, conversational style without conscious

Above—*Early stages of preparing books for binding, and* Below—*Finishing processes in the Roycroft bindery.*

effort. Sometimes he would sit while dictating as if in communion with the thoughts that came from every quarter of the universe to his receptive mind. Again he would walk about the room unconscious of anything save the thoughts that possessed him and which he was expressing.

'Thoughts are everywhere,' he said. 'They are in the air. All we have to do is to reach up and grasp them.' And truly this was all he had to do.

Wherever he went admirers said: 'Why, Mr. Hubbard, how young you look! You do not look a day older than when I saw you twenty years ago. How do you do it, busy as you are and as hard as you work?'

Here was his secret (for as he himself has said, a secret is something that you tell somebody else and that somebody else tells somebody else until finally everybody knows it):

'Eat less and breathe more. Worry less and work more. Hate less and love more. Complain less and laugh more. Nothing is so hygienic as happiness. Good cheer is prophylactic.'

He knew the power that comes through repose.

ONE Friday or Saturday we were in a city not far from Philadelphia, calling on a large company in regard to an order that would have meant much to the Roycroft shops.

The officials urged Mr. Hubbard to remain over and take a yacht trip with them over the week-end. The invitation had a great lure for me, and I urged him to accept; but he declined, saying that he had important business in Philadelphia and absolutely had to return there as he could not break the appointments he had made.

I knew that he had no appointments there, so when we had a chance to exchange a few words alone, I said:

'Mr. Hubbard, we have no appointments in Philadelphia.'

'I know,' he replied, 'but you couldn't stand it out there three days with them. After they would be out a few hours they would all be drunk and you couldn't get away. There wouldn't be any fun in that.'

When we reached Philadelphia, he took me around and showed me Independence Hall, the Liberty Bell, Franklin's grave, and many other points of interest. It happened that Billy Sunday was in the city, so I suggested that we go over and see what he was like. Neither he nor I had ever seen him in action so over we went. It was Hubbard's opinion that as a preacher Sunday was a fine acrobat.

But even so there was no bitterness. 'Personally, I like Billy Sunday,' said Elbert Hubbard. 'Meet him as man to man and he is a good sport and a charming gentleman. He never pushes his hypnotic spell on his friends, nor does he pull it on you personally when you talk with him over the teacups.'

And when Elbert Hubbard went down with the *Lusitania*, Billy Sunday showed his sportsmanship by saying:

'I have always had great admiration for Elbert Hubbard's literary ability. His style of putting things without the use of big words was attractive. He has written some gems. I regard his *Little Journeys to the Homes of the Great* as masterpieces.'

(This is the second of three articles on this subject. The next will appear in an early issue.)

Books That Start the Bells Ringing

(Continued from page 8)

Philadelphia, I suppose, in the days of the great ships and far adventures. *Shot Towers* is a New England story, I should say, at a time when industry was just beginning, with a good dash of Irish in it, and the invention of a wheel hub, a most prosaic hub for a most charming story and much good writing. But *Blowing Weather* is a tale of American business on the sea, in shipyards, a story of 'blood tells,' of plague, of strange adventures in the sea of dead ships, of sinister intrigue, and love, and the flavor of early American life. They are both ably wrought stories of this people of ours—studies in expectation, perhaps, of the American Novel.

All that I can find about John T. McIntyre is this in *Who's Who.*

McINTYRE, JOHN T(homas), dramatist, author; b. Phila., Pa. Nov. 26, 1871; s. Patrick and Sarah (Walker) M.; ed. Phila. Began as dramatist, 1892. Author: The Ragged Edge, 1902; The Wedding Journey, 1910; Blowing Weather, 1923; A Young Man's Fancy, 1925. Home: 1720 Sansom St., Phila., Pa.

I have read Herbert Asbury's *Up From Methodism*—Alfred A. Knopf, publisher—a slim volume, too dear at two dollars, and useful only to those who may care to know something about Herbert Asbury. He is, I understand, an undistinguished member of the newer journalists now congregated in and around New York. He is a member of the family of the first Methodist Bishop in America and, gosh, how he hates it. I gather that he is not a Methodist now, but I have a feeling about him that if he is ever to do any work he will have to come back to something like Methodism and, when he goes out again, go out the other way. To go out and go up means something, to go out and go down means nothing to the world. Good manners are essential in a writer and it is not good manners to besmirch one's family or the institutions that first made one a freeman in the realm of intellect. Methodism did that for Herbert Asbury. There are narrow people in the churches, of course; that is the place for them, that they may be broadened. Hypocrites are there, too, although not so numerously inside the church as out of it, for the former profitable, social and other reasons for religious hypocrisy do not now exist; in fact, it is almost quite the other way around.

But Herbert Asbury doesn't see any of these things; he is passing through the purgative period which attends all youth and he has mistaken it for a world revolution of which the public must be apprised. He displays in public a specimen that is usually shown only in private to a competent physician. I am not a Methodist and therefore do not speak from that angle. my interest is more aroused by this case of an overexcited mind that does not impress me as being quite honest; and this impression arises, I think, from the young man's willingness to drop below his theme to the level of low laughter. He has too successfully portrayed himself, and the worst of it is that it is not worth it. An ineradicable instinct moves us to despise anyone who mocks his own people for the amusement of the anti-minded alien. And there seems to exist much publisher's encouragement for just this sort of thing.

THE man who first established white civilization in a large way in California and really opened it to the world after herculean labors and hardships, on whose land gold was first discovered, dropped dead a pauper at Washington in 1880. He was Johann August Sutter, born in Switzerland, a Napoleon in the breadth of his conceptions, a giant in the energy with which he realized them under most difficult conditions. He had established New Helvetia, owned the land on which San Francisco and Santa Barbara stand, was stolen blind in the gold rush, was burned out of every possession when he appealed to the law, spent long years with the *Apocalypse* trying to read therein the meaning of his peculiar fate, and died on the steps of the Capitol at Washington when a mocking urchin ran and told him that Congress had just allowed his claim—it was Sunday and Congress was not even in session.

All this is told in *Sutter's Gold*, written in rapid, eloquent, nervous French by Blaise Cendrars, skilfully translated by Henry Longan Stuart, and published, bound in gold-covered cloth, by Harpers, the price two dollars and fifty cents, the book a slim one of 179 pages. There is more insight to be had from it than from many volumes of history. It is history as it should be, set out in a way that sends the mind rummaging along the highways and byways which it must travel to find its own philosophy of history; it is a period seen through the lens of one life of sufficient field to reflect a multitude. No fiction equals truth when etched so sharply. *Sutter's Gold* is one of the few recent books where subject, author, translator and publisher worked ably for a satisfying result.

Pen-and-ink impression by GERALD VAN DER HEYDEN

Paid—A Billion Dollars for Beauty

(*Continued from page 15*)

alchemist were turned to the search for miraculous springs, wonderful fountains, and, what was most absurdly impossible, magic mills, where youth might be obtained like meal through grinding.

The Greeks believed the restoration to youth and the gift of beauty to be the dower of the goddess Hebe, bestowed upon those happy mortals whom she selected for this favor.

Bacon, urging the potency of the fabled 'elixir' upon the attention of Pope Nicholas IV, told of an aged toiler in the fields of Sicily who found a golden phial filled with yellow fluid, which he drank, supposing it to be dew. Instantly he was transformed into a young man full of health and vigor.

Those of the ancients who accepted oriental teachings and who believed in the immortality of the soul saw no reason why man literally should not live forever if he but possessed the requisite knowledge. Hence the first aim of the alchemist was to devise some means of exactly replacing the waste of the human system so as to arrest the approach of infirmity. When this was done, it was only one step further along the path of discovery to find the precious elixir that could confer upon immortality perpetual youth.

The 'elixirvitae' was prepared by the alchemists and magicians of the Middle Ages after various recipes, with certain diabolic ceremonies guaranteed to insure everlasting life and youth. The following verse shows its hold upon the credulous:

He that has once the Flower of the Sun,
The perfect ruby which we call elixir, by its virtue
Can confer honor, love, respect, long life,
Give safety, valor, yea and victory,
To whom he will; in eight and twenty days,
He'll make an old man of fourscore, a child.
—*Ben Jonson.*

The Brahmins still brew a mixture of mercury and sulphur which they drink twice a month to prolong life. Jemahid, King of the Genii, was famed for the possession of a golden cup filled with the Elixir of Life. The cup was hidden by the Genii, but was found when the foundations of Persepolis were dug. Thomas Moore, famous Irish poet, makes a reference to it as follows:

I knew, too, where the genii hid
The jeweled cup of their King Jemahid
With life's elixir sparkling high.

The *Rubaiyat* shows the Persian faith in the mystic draught. The quest for eternal youth gave rise to many queer and ofttimes gruesome practices, in which sacrifice of human life played an important part. Some, like Althotas, advocated the drinking of the blood of a freshly slain babe or virgin as an infallible tonic.

In some parts of Scotland revivification was deemed possible provided the aged or dying were placed within the still warm carcass of a freshly killed ox or horse and allowed to remain there until a number of hours had passed.

Through his famous 'Wine of Egypt,' Count Alessandro di Cagliostro made the sensation of Europe and a fortune of fabulous proportions. This wizard, called the King of Fakirs, claimed to have lived two thousand years by the use of this decoction. In the course of this remarkable span of life he professed to have witnessed all the world's important events, including the Crucifixion. Some believed him to be Ahasuerus, the Wandering Jew. As a further testimony to the rejuvenating power of his wine, he would point to his beautiful young wife, whom he married in Rome, and declare that she had been a wrinkled and withered crone of more than fourscore, whose transformation had been accomplished by a single draught of the miraculous potion. His wine elixir did not prevent his death in prison in August, 1705.

Beauty specialists, enshrined in elaborate and exotic laboratories, are disciples of an ancient cult.

Beauty's power stands forth in every age, and the procession of beautiful women, notable for their charms and the good and the harm they created, makes brilliant splashes of drama and color in the fabric of the world's historic tapestry. Six thousand years before the Christian Era began, a dainty little maid of the Nile, supposed to be the original Cinderella, enslaved Egypt's haughty king with her girlish charm and the tiniest foot in all his land. He made her his queen and set her upon his throne, and she set her foot upon his neck. He and all his splendor have passed into oblivion, but the fame of her foot has lived in fairy tale and poem, delighting the world's children to the present day.

The trail of death, sorrow and destruction which followed in the wake of the glorious Helen of Troy is but a gigantic illustration of the chaos chargeable to beauty's lure.

The terrific and tragic upheaval, wrought by Egypt's matchless Cleopatra, due to the dominion of the intrepid Antony, with its pitiful finale, ranks as one of the best-known examples of the store set by a lovely woman's smile and the lengths to which infatuated man has gone ever and again through the ages to win a beauty's favor.

Guinevere disrupted King Arthur's court and scattered the Knights of the Round Table when she led the gallant Lancelot away from the straight and narrow path of knightly loyalty and honor.

Henry VIII became the original Bluebeard in his craze for collecting beautiful queens, killing them off on the merest pretext when their fascinations palled or faded.

Because of lovely Marie Antoinette, pride of the Austrian Court, statesmen and scholars fought for the smile of the Dauphin's bride, and finally church, court and state precipitated the French Revolution, while love philters, powders and potions mixed into politics, and even the Queen's Necklace was thrown futilely into the smouldering fire of passion and hate to smother the conflagration and keep a tottering throne and its luckless rulers from the abyss.

Neither love nor beauty stood between the hapless Marie and the guillotine, nor did they serve the famous and infamous du Barry who ruled Louis XV and his courtiers by her loveliness with an imperious impudence and abandon that was the scandal of Europe.

To the powerful Queen Elizabeth of England, the desire for unfailing beauty was paramount. Royal favor came quickest and stayed longest with those of her satellites who sensed this weakness and no plea was granted more readily than that prefaced by insidious and subtle flattery of her physical charm. She, too, purchased love potions and partook of various decoctions, like any lovesick peasant girl, in a feverish longing to be young, lovely, and loved, especially when the charms of Mary Queen of Scots were ever being sung in her ears.

Just as, hundreds of years ago, men and women hungered and thirsted and perished chasing an illusive chimera, so today men and women continue the wild pursuit for the secrets of perfect health, perpetual youth, and beauty. Every theory of rejuvenation sends hope springing anew in the mortal breast, and the risk and the cost are alike discounted in the great possibility of success. Healing springs are soon dipped dry while the aspirants for cures bake themselves in mud, soak themselves in salt, perfume, or bake in the sun and sand for the desired benefit.

The Backstage Story of Marion Talley

(*Continued from page 3*)

cultural in that city, came into the picture.

'Blanche, did you hear this little girl that Mrs. Powell talks about?' he asked Miss Ledderman.

Miss Ledderman admitted that she had heard Marion sing and that she shared Mrs. Powell's enthusiasm. Then she said to Mr. Harzfeld: 'Would you like to hear her?'

'I would,' responded this Kansas City business man.

'Would you come to town to hear her?' It was a hot July day when this conversation took place.

'Yes, if she's as wonderful as you say.'

A musical was arranged for a hot July night and everybody present in that small circle of music lovers, with several of whom I have talked, was immediately and deeply impressed with what they call 'the spiritual quality of Marion Talley's voice.' One man said to me: 'When she began to sing, I couldn't believe it was a child singing.'

Mr. Harzfeld said to me when I interviewed him: 'She disturbed my sleep all night long. I found that my sister who had heard Marion wasn't sleeping either, so we both got up in the middle of the night. We decided that something must be done to get that child a national hearing.'

Then another man entered the picture. His name was John Harding, also a Kansas City lawyer. Another recital was arranged before him. Marion sang a song called 'The Wren,' which she had learned from listening to Galli-Curci on the phonograph records. These music lovers compared Marion's voice with the record and honestly felt that the child sang that beautiful song as well as the prima donna.

Everybody was so impressed that a public concert was arranged to make money for Marion's further musical education. In the meantime, Madame Schumann-Heink heard this child and said: 'Her voice is one of pure gold.'

The concert was given October 17, 1922. A public committee was formed to take charge of the concert and Mayor Beach was chairman. The house was scaled and seats were sold by private subscription for $125 a box down to $5 a seat. The net proceeds were $10,000. The audience comprised the wealth of the city, and no seat sold for less than five dollars.

I have talked with several persons who were present. I have had at least a dozen of them say to me: 'It was the most memorable thing in my life.'

That night Marion sang 'There Shall Be No Night There.' The audience was thrilled.

As one woman expressed it, 'She looked like an angel and she sang like an angel.'

A committee was formed to give this fifteen-year-old girl a chance. Otto H. Kahn of the Metropolitan Opera Company was written to, and an audience arranged for November 8, 1922.

Marion went to New York with a group of friends, and from them this chapter in her life has been gathered. The great auditorium of the Metropolitan Opera House was empty save for what they called 'The Supreme Court of the Musical World.'

This court consisted of Otto Kahn, who sat at the back of the Opera House with Guilo Gatti Casazza, his impresario; Andreas Dippel, former director of the Chicago Opera House; Assistant Conductors Ruberto Moranzi, Arturo Bodanski, Nahan Franko, and Guiseppe Bamboschek as auditors; and Louis Hasselman, the French conductor, who played Miss Talley's accompaniments in 'The Wren,' 'Knowest Thou That Fair Land,' and 'The Kiss.'

Portrait by IRVING R. BACON

Miss Talley in costume for one of her roles.

—*Hixon Studios.*

When this little fifteen-year-old girl stepped out on that great stage, this supreme court wondered. Had they been fooled again by butter-and-egg men from a butter-and-egg town? The Kansas City group which had accompanied Marion were scattered about the auditorium.

The girl looked even smaller than she really was as she stood alone on the vast stage of the Metropolitan. She had not proceeded far when the accompanist i sheer amazement, as this girl struck particularly high note, turned in his cha abruptly with mouth agape.

Gatti Casazza pulled at his beard stirred.

The moment she finished singing, ther were little outbursts of applause all throug the great palace of music.

Mr. Kahn said: 'Well, young lady, con gratulations and *au revoir*. I shall mee you here again, but next time you'll b over there behind the footlights an thousands will be paying for the privileg of hearing you sing.'

But there was even a more interestin side to this visit of Marion's to New Yor It was her first trip East. New York Cit was a fairyland to her.

Her hotel corridor was crowded da and night with reporters to see her. Sh couldn't understand it at all. She aske why they wanted to see her. One reporte said: 'You are a Cinderella-story girl.'

Marion played 'jacks' on the train o the way to New York City. When sh arrived she wanted to see Coney Island, th Statue of Liberty and the five- and ten-cen stores. Said one of the party: 'She seeme happiest when she got in the five- and ten cent stores.'

Marion had a little violinist friend an they were all going to see the Statue of Liber ty. One of the party said about this trip

'We drove to the Batter to catch the boat. I got ou to get the boat tickets, bu as Marion got out, sh slammed the automobil door shut on the boy violin ist's hand and smashed hi fingers. The boy had to b taken to the doctor the injury was s painful.

'I did not know about this acciden until I saw Marion over in a corne with her father weeping and weep ing. She wouldn' look at the Statu of Liberty. W couldn't get her t look at it ever though it was on of the things tha she was most eage to see. She kep saying over and over, "Just think what I've done! I wouldn't be so bad if it had been my hand, but he has to play his violin with his hand." We couldn't comfort her until we phoned to the hospital and learned that the accident would not injure the hand permanently.'

During the four years of training, the original educational fund ran out and it was necessary to obtain more money. Marion did not want another benefit concert. She had received a letter from a 'catty' Kansas City woman the winter

before criticizing her for buying a coat. This woman told her that Kansas City hadn't given her money to buy coats, but to get an education. There are always such people in the world, and it turned out as usual that the woman who wrote had not paid a penny to the fund. However, this letter hurt, and Marion did not want any more benefit concerts. Finally she was persuaded, and said: 'I'll be willing to have another concert but I don't want to charge any more than any other artist.' A concert was arranged for April 10, 1924.

On February 20, a letter came to Kansas City from Marion saying: 'I hear that Galli-Curci is going to be in Kansas City and also John McCormick. Don't you think that we ought to postpone our concert following two such great artists?' She did not realize then, nor does she yet, that she is as great a drawing card as any singer in the world. But in spite of Marion's fears 6,000 seats were provided for and those who promoted this concert had to refuse two thousand applications for tickets forty-eight hours before the concert.

She appeared February 18, 1926, in her first Metropolitan starring. Her début in New York is an old story. Seats sold for four hundred dollars.

John R. Jones was her first teacher in Kansas City when she was eleven years of age and she sang in a choir in the First Christian Church. In the Liberty drives during the war she was popular. Ottley Cranston was her second teacher and it was during this time that he put her in *Mignon* and she attracted her first public attention. She made her grand opera début as Gilda in *Rigoletto*.

'Marion is always the most poised person among us at any crisis in her career,' said one of the men who had done most to get her recognition. 'She was the most poised in the Metropolitan Opera House the night she made her début. The rest of us were nervous and excited. Marion was calm and sure. She says that her voice is given her by God, and that it is given her to use for spiritual purposes. Therefore she is always sure of herself, without egotism. She always includes several religious numbers in all her concert programs, and she sings them in such a manner as to subdue and win her audience.'

I heard Marion Talley on that eventful night when she returned to the city which gave her her chance. It was her first concert following her début in grand opera. When she sang 'And God Shall Wipe Away All Tears' there was a thrill passed over those six thousand people.

For several years Miss Talley sang for the Unity School of Christianity and at Christmas time she sent a message to the pupils through the medium of their magazine. I quote the message in full:

'The editors have asked me to send through these pages a brief message to young people who are hoping, striving and studying to succeed. I suppose this is because, from their standpoint, the success that has come to me looks very large and imposing and awe-inspiring. Well, I may as well confess that it looks large and imposing and awe-inspiring to me, too. Sometimes, I can hardly believe it myself. But it has taught me something—this thing that you call success—and the best message I can send to other young people is to tell them what that something is.

'I think of my voice as the gift of God. Of course it is: it couldn't come to me from any other source, because God is the only source of all that is good. I knew, a long time ago, that it was God's gift—when I first began to use it, in the days when I first sang at Unity in Kansas City. And the thing that I have found out is that, as I use God's gift, it grows. I know that my voice has grown in beauty and power because I have used it. It has amazed me sometimes.

'I am no older now than many of you who will read this. I'm nineteen. I know what you think and what you like and what you do. I think and like and do many of the same things. I believe that each of you, like me, has a gift of some kind. Maybe you can't sing as I can; but I can't paint as perhaps you can—or carry on a business, or write a book, or build houses, or manage people. I have my gift, but you have yours. You may think yours is a very small one compared with mine; but there was a time when I thought mine was small. And I know that if you will use your gift—and if you will give out what you have—it will grow into a great one—simply because that's the way it is with God's gifts. But you must use it and not waste it. Giving it out doesn't mean throwing it away wantonly. Maybe you will have to make some sacrifices for it; I have made sacrifices that probably you don't dream of. But, oh, it's worth while!

'People ask about my courage before audiences, my lack of stage fright! Well, to me it is a very simple thing. When I stood before the huge audience in the Metropolitan Opera House in New York for my début—when I faced the famous diamond horseshoe!—people said they marveled at my poise. But I was not afraid. Why should I be? I knew that the most sophisticated audience in America, if not in the world, was waiting to hear me, and that maybe they were not all hoping for my success. I knew that the cleverest critics of all the great papers were there to study and pass judgment upon me. I knew that hundreds of real musicians, some of them great, were listening. But I wasn't afraid. Because it seemed to me that if it was God's gift I had to give them I need not be concerned about their opinion of it. I knew that my voice only comes through me after all. It is from God—and if I just let it come from Him through me to them, it must be perfect as everything from Him is perfect. I knew that He always takes care of that. So—I just stood up and sang—and loved it! And the people seemed pleased.

'I was happy—oh, so happy! Not just because it was success for me, but because the sense that the great gift was flowing through me brought with it a joy, an exaltation, quite apart from the applause and the promise of fame and money and all that. It was just that I knew I'd been given something to give to them—all I had to do was to give it. I did. And it was a beautiful experience.

'But even that night my voice grew!

'Now this is a much longer letter than I planned to write. So, for that reason I am not going to call it my "message" at all, because I was asked for a brief message! The letter is the explanation of my message, which I think I can put very briefly indeed now. But it means so much! So I say, because I've found out what it means, to anyone with ambition and a talent there is just one possible, but one *sure*, road to success, and it is summed up in a word: Give!

'If you do you will succeed.'

DACOR

Saves Clothes
and Closet Space

NEW clothes hook, only 6" long, notched to prevent slipping and crowding, holds six suit or dress hangers. Keeps your clothes in wearable condition.

DOUBLES CLOSET CAPACITY

Only three Dacor Hooks necessary to equip the average closet for neat accommodation of 18 garments. Hooks are durably constructed and attractively finished in nickel.

Set of Three Hooks $1

At leading hardware and department stores. If your dealer cannot supply you order direct enclosing dealer's name.

Manufactured by
DAVIS TOOL & ENGINEERING CO.
6483 Epworth Blvd. - Detroit, Mich.

TRAVEL for 'UNCLE SAM'

RAILWAY MAIL CLERKS

$158 to $225 month. Men, 18 up. Steady. Common education sufficient. Write IMMEDIATELY for 32-page book with list of positions now open to men and women 18 up, and full particulars. Do it today.

Skiing in the Bavarian Alps

(*Continued from page 13*)

The Angenhutte, which was almost buried in snow.

country, taking along only what was necessary.

The weather was still so thick, and everything so white, that we climbed cautiously until noon, when we came abreast the Zugspitze. Here, while yelling at a cliff to get echoes, we heard the faint barking of a dog far above. A little farther on a halt was called for fear we were nearing the precipice between the two mountains. We had been climbing with the aid of *Seehundfells*—long strips of sea-lion skin with stiff hair slanting backward, attached to the under side of the skis to facilitate climbing. These we now took off and commenced an exciting descent over the most ideal snow.

About four inches of new snow had fallen on the crust beneath, making it possible for us to glide along at a furious clip. The weather cleared as we descended, causing us to pause in wonder at the beautiful views revealed as the clouds rolled away from the mountain peaks below. After passing through the *Hellenthal*, we swooped down in a glorious finish, ending at the *Knoorhutte*, to find it deserted and cleaned up, spick and span.

Now, Dr. Jaeger and Herr Multerer, having given up hope of reaching the Zugspitze, bade us farewell, and with our shouts of *'Heil,'* disappeared in rapid glides and swings down the steep mountainside. The rest of us, on the other hand, being kindred spirits, with plenty of hope, decided to attempt the Zugspitze immediately after luncheon. Just as we were finishing our beefsteak and onions, a man crawled through the window. He proved to be no other than Dr. Zinstler, of the meteorological station.

He was a small, good-looking young man of athletic build, wearing a short mustache on a face so tanned that his extremely light eyes fairly shone in contrast, besides exhibiting the most remarkable haircut, self-inflicted, by the aid of scissors and clippers, the smooth part commencing abruptly back of the ears. His face was dripping with perspiration, while green dye streamed down his cheeks from his cap. We were the first persons he had seen for more than three months, and he literally took us in his arms, so great was his joy.

After depositing his *Rucksack*, peeling off his coat, and mopping his face, he took a long drink from a wine-filled canteen and lighted a big, fat cigar. We prepared to resume our climb, the success of our trip now being assured, for here was the doctor himself to guide us back.

So again we ascended the mountain, this time with a definite end in view, and in fine weather. Up, up we climbed on our skis, until directly under the Zugspitze, coming in plain view for the first time of the meteorological station and *Munchener Haus* surmounting the peak. Here everybody took a short rest, sitting on top of the hill in the broiling sun, the reflex rays from the snow being terribly strong. My face and forehead were already badly burned.

AGAIN we put on our skis, heaved our heavy *Rucksacks* on our backs and continued the climb upward, passing the site of a cabin that had been swept away by an avalanche during the winter; a few boards and wisps of hay still remained. When we could go no farther on skis, we cached them under a rocky cliff, where the wind had hollowed out a spot in the snow, replacing them with *Steigizen*, or ice creepers.

The ascent now led up the steepest snow-crusted incline imaginable. Dr. Zinstler led the way with his pick, kicking his toes through the crust for foothold. Thus we followed him slowly up, step by step.

The higher we climbed, the more dangerous the trail became until we reached the *Grat*, or backbone of the mountain, where the knife-like edge fell away perpendicularly, hundreds of meters below, with here and there jagged tooth-like rocks jutting out. We were not surprised to learn that fatal accidents had occurred here. To make matters worse, the wind was blowing in heavy gusts so that the greatest caution was necessary to maintain one's foothold.

Self-preservation was now the predominating instinct. I found myself more concentrated on the control of my muscles and limbs than at any previous time in my life, carefully calculating every jab of my alpine stick and the placing of each step. At such appalling heights, many persons are overcome by dizziness and lose all control. I confess that I was mighty glad to get ove the worst of it with only a steep pathwa left to climb; but oh, how I dreaded goin back over that trail on the morrow!

As we neared the summit and were out o danger, we had opportunity to look down o the multitude of peaks surrounding us o every side. The setting sun was burnishin this vast scene with its rays, producing th most gorgeous color effects I have eve seen in nature. The snow, in shadow silhouetted against the green-blue sky, wa almost purple-black; our faces fiery red i contrast, and our shadows, cast on a leve with our heads on the brilliant rose-tinte snowbank, were deep peacock-blue.

THE entrance to the tower was throug the basement, where coal and wood, coils o rope and other mountain-climbing para phernalia were stored. An iron door to th right led into the *Munchener Haus* of th *Alpenverein*, and immediately in front, door opened to an inclosed stairway tha led to the living room above. Here a grea St. Bernard dog sprang to meet us, over joyed to see us after being shut up alone a afternoon. While the doctor built the fir we removed our wet clothing and mad ourselves comfortable in his cozy quarter

A desk and iron bed occupied one side o the room opposite a cupboard and the stove while a table and four chairs stood in th center. There was a telephone and on th walls a barometer with paper roll and needl at work, besides other meteorological equip ment.

While keeping up an animated con versation, the doctor set before us severa bottles containing cognac, lemon extrac and raspberry, besides soda syphons, glasse and sugar. Snow water alone makes poor beverage. In preparing supper, th doctor made several excursions to his store room above, each time bringing dow astonishing evidences of a well-stocked lard er, the results of which were that he serve us with an excellent soup, asparagus covere with olive oil, a big, fat, boiled ham, boiled tongue, preserves, cakes and Rhin wine. It was a feast such as I have seldo enjoyed.

HE then told us of how well supplie he was with beer, wine, tobacco, flou potatoes, cakes, all kinds of preserved fruit and honey, eggs in *Kalk*, meats, fish, an so forth; enough provisions to last him tw years. All these supplies, besides woo and coal, had to be carried up the last stage by men who lugged on their backs tw hundred pounds of coal at a time, chargin 14 marks a hundred for transportation alone

The tower was braced with steel cable and capable of withstanding a wind with velocity of 200 miles an hour. The meta walls were filled with cork and chemical to make it impervious to the weather, an the structure was grounded by a cabl reaching to the *Partnach* down in the valle far below. In severe electrical storms th doctor told us the static shot out of his hai and fingers, and in heavy windstorms, th draft in the chimney became so great th fire had to be put out.

On the third floor was the laboratory with its many interesting instruments, such as the glass ball that burned the sun' record on a strip of paper, starting in a fine line with the weak morning rays an gradually widening as the sun rose and in creased in intensity. There was the delicat

ind-recording instrument with its tiny sc-shaped cups that whirled at the intest breath and recorded the velocity the wind; also much other scientific uipment.

Climbing up through a hatchway, we me out on the ice-coated roof. Here on is pinnacle, nearly two miles above sea vel, we became acquainted with the ysteries of the night. We gazed in awe d wonder at the vast, vaulted heavens ove, bejeweled and glittering with yriads of stars. Almost directly beneath, immered the lights of Partenkirchen and armisch, to the left Lermos, and farther way, those of other towns. Far to e north was Munich, a long, glowing reak, plainly visible though 100 kilo-eters away.

As we sat smoking and sipping our good st's fine old '*Diederscheimer*' in his snug om, our conversation drifted to the subject the war. Isolated as he was, Dr. Zinstler t a different perspective on that great agedy from that of the ordinary German. e criticized the highly colored and over-nfident reports of the press, and seemed ther pessimistic of the outcome.

At last we bade our host good night, and, ith great reluctance, withdrew to the freez-g sleeping quarters of the *Munchener Haus*. the faint candlelight we rummaged ound until we collected eight blankets iece and then made our beds on the frosty attresses of the upper bunks, the lower es having been invaded by snowdrifts. o fortify myself against the cold, I put on y overcoat, three pairs of woolen socks, illed my cap over my ears and buried my nds in my pockets.

AS I shivered through the night, afraid move for fear of disturbing the bed-othes, I came to the conclusion that what old southern lady once told me about hell ing cold must be true. Zintmeister went sleep, though, and snored lustily all ght long.

With the first sign of dawn, we crawled t of our icy quarters and found Dr. Zinstler already up and busy with his instruments. The sky was clouding up and the barometer going down. After a hearty breakfast, we waited until eleven o'clock to give the sun a chance to soften up the snow crust, then we bade our host goodby, though we could not thank him adequately for his hospitality.

The descent proved less difficult than anticipated, the snow crust being just soft enough to break through and still hold; besides, there was little wind, for all of which we were thankful. It took an hour to go up from where we had left our skis, but we must have got down to them in almost fifteen minutes.

WITH perfect snow for skiing, we serpentined down at a thrilling speed to the site of the destroyed cabin, stopping there for lunch. The snow was so smooth that the orange peel we threw away rolled far down the mountainside. Then followed a grand trip down to the *Knoorhutte*, for we traveled along at a breath-taking rate, making the most daring turns at high speed.

What a wonderful thing to be thankful for, is a fine, strong body, capable of responding to the will that requires physical endurance. To the adventurous minded, who crave the great open spaces, there is no better sport to be recommended than that of skiing, for, in developing courage, skill in the sense of balance, hardihood and muscle, it has no equal; having the advantage of being a fatiguing sport only going uphill, but full of speed and thrills coming down, apparently dangerous because of inevitable tumbles, but actually very little so, for in all the ski-jumping contests I have witnessed, in which fully half of the entrants took spectacular spills, I have never seen anyone injured. This is explained by the fact that one either falls on soft snow or, in jumping, lands in a glancing manner on a steep hillside.

It was nearing six o'clock when we reached the *Sportsplatz*, near Partenkirchen, both of us feeling fit and immensely elated over our achievement.

The clouds rolled away from the mountain peaks.

Debt—Our Biggest National Industry

—— (*Continued from page 2*) ——

the issue proudly. It was for *schools*, don't you see?

The splendid purpose for which they voted to tax themselves obscured the *real* cost—all that they saw was the fact that the *buildings* would cost $200,000. They did not and have not as yet seen that the bond issue in reality is not for just merely $200,000, but that their obligation amounts to something over a half-million dollars.

The price of the school buildings is one thing, *the price of the money* is on quite a different basis. The county board which negotiated this 'loan' is merely one among a thousand others which have performed the same brilliant trick. None of them would think of paying such an extortionate price for *any other* commodity which it was in the market to buy. It would scrutinize the specifications in detail and be sure, when buying ordinary commodities, that there was no 'joker' in the contract. One may be sure that no county board would authorize a contract purchase for $200,000 and then pay over a half-million dollars for it. But perhaps the purchase of money does not represent an 'ordinary' commodity, does not warrant a scrutinizing examination of the fundamentals of the terms of purchase.

THE board of school authorities would never pay a building contractor $500,000 for a $200,000 school building, or that sum for four structures costing $50,000 each.

And yet that is exactly what was done by the board in question and has been done by innumerable other public boards of education, but indirectly. But the building contractor is certainly *not* the one who gets the extra $300,000. He gets $200,000 for his school buildings, and somebody else gets $300,000—for what? For absolutely nothing!

The contractor no doubt would have been tickled to death to build *two* schools each costing $200,000, or *eight* of the smaller ones each costing $50,000, and would have donated $100,000 to charity, say, for the total sum which the county board, following the practice of the rest of the nation, is paying for only *one* school, just that one and nothing more—no extra buildings thrown in, no great sums given to charity besides.

After this—and a thousand other instances identical in character, only differing in sums ranging from $20,000 to many millions—can it be said that the money question does not deserve to be studied, that those who endeavor to enlighten the public are not justified? Can anyone listen to such instances, repeated as they are unceasingly, without an hysteric laugh at their tragic ridiculousness? Will it even be believed that such crass futility is possible!

(*This is the first of a series presenting some of the hidden features of modern finance underlying public bond issues; and suggesting possible means of offsetting the high price of money. The next article will appear in an early issue.*)

CHATS WITH OFFICE CALLERS

The Irate Father stormed in after having just finished paying the bill for the family scion's vacation weeks at home. 'I tell you the younger generation is getting outrageous. My boy shoots through more cash in a week than I had in a year. Why, when I was young we didn't have—'

'No, and your father didn't have a tenth of the things you now have,' gently countered ***the Young Old Man*** who happened to be present. 'Why, you make more money in a month than your father made in twelve; you have a beautiful home with all the modern conveniences; it is run smoothly and noiselessly; you have a big car and a chauffeur to drive you to a pleasant comfortable office. The demands your son makes on your pocketbook are probably not half so burdensome as the ones you made on your father's.

'What you do not realize is that your son is a product of present conditions and not of those of a generation ago; that he is just as able to grapple with the facts of life as they are today as you were thirty-five years ago. Why, if he were up against it he could go out and secure a contract tomorrow with a jazz band at a salary that would make the one you started with look sick in comparison, and as for salesmanship, well, all I can tell you is that the other day he sold me a car that I didn't need and at the same time made me believe I was getting a bargain!'

ɾ ɾ ɾ

'Speaking of banks,' said ***the Retired Banker,*** 'calls forth the recollection that the world's first financial institution was the Bank of Venice, founded in 1171. At that time the long wars between the Guelphs and the Ghibellines taxed the resources of the Venetian government. When every other resource had been exhausted, the government found it necessary to resort to forced loans from its wealthy citizens. Thus the chamber of loans was organized which culminated in a banking institution. Funds once deposited in the bank could not be withdrawn, but were transferable at the pleasure of the owners upon the bank's books. So thoroughly did the bank credits become the means by which business was done that these credits were at a premium over coin, the latter often being clipped and worn, as well as being of various countries and uncertain values. The Bank of Venice continued without interruption until the Venetian republic was overthrown by the revolutionary army of France in 1797.'

ɾ ɾ ɾ

'Those who are afraid of immigration,' said ***the Representative of the American Minority*** in New York City, 'would imagine in taking note of the arrivals at Ellis Island that none would long remain. When they are not woebegone with homesickness they are likely to be full of plans for returning to Europe in a few years. One would think that these people were foreigners not only by birth but by preference.

'But a few months later you see them, even in their own New York communities, with American clothes, and using American slang and business words along with their native language. A few years more, and —well, you know what kind of fight a man makes against deportation, even if he is an anarchist and professes to hate this country. The return to Europe is still in mind, but it is postponed and postponed. The original hope of returning to live in Europe is changed to a plan for a visit. Sometimes the visit is never made. The foreigner has become an American, so far as his type of mind and heart permits.

'Ellis Island is a good place in which to study the immigrant, but a poor place in which to study immigration. The value of a checking of immigration is that it lessens the strength of new infusions from abroad, and lets the American assimilative process fully assimilate. If this could go on unimpeded, even New York might some day become American.'

ɾ ɾ ɾ

'In the university line one notices a great difference between the French educational system and that of America,' said ***the American University Man*** who is spending two years in a French college. 'The basis of the French method is the memory, and they appear to judge a man's quality by the facility with which he can commit facts to memory. Their exams to a large extent tend to place the premium on that faculty. The relationship between professors and students is not quite so free as at home but tends toward harmonious collaboration. As a general rule the number of hours spent at the university in a professional school is considerably higher than that employed at home—the students do not enjoy, as the French call it, *Semaine Anglaise*, better known to us as "Saturday afternoon off." Questions of extracurricular activities at the universities are practically a negative factor. In the school I attend they have one paper which is issued monthly; the sports situation is the same, no provisions being made for them, and the students show no great desire to start activities in that direction. Naturally with this *status quo*, such affairs as intercollegiate matches are not even heard of. There appear now and then signs which indicate a renaissance in the ideas of the students; for instance, the attitude toward study abroad—it is most rare to find a student that even considers doing work anywhere than in France. This was only too well illustrated in the case of one of the holders of a Rockefeller scholarship. In a conversation with the gentleman I inquired as to his procedure in obtaining the fellowship and was informed that one of his professors had heard of the scholarship and sent in a letter of recommendation for the student, who was quite surprised several weeks later to receive word that he had been awarded the prize. Apparently there had been no competition, so the question was quickly decided.

'The social life of a French university is centered around several balls which are held in the winter season. Each faculty gives a party but a student may attend all the dances if he wishes. These affairs are most amusing—the walls of the dance floor are lined with the mothers of the girls who have the good fortune to be at t dance. The expression, at the same ti bored and expectant, shown by these ki old ladies is understood when one remembe that many marriages result from acquai anceships made at these balls.'

ɾ ɾ ɾ

'I prefer an upper berth on a Pullman,' sa ***the Veteran Salesman.*** 'But on o trip I could get into the sleeping car on because a man who had reserved a low berth canceled his reservation at the la minute.

'I had begun to get ready for my night rest, when I saw a stage farmer, as seemed, come down the aisle to my co partment. Six feet tall, broad as a churc with heavy boots and heavy clothes, started to climb to that upper shelf. halted him halfway up, and offered trade. He was gruffly grateful, and traded.

'In the next town I had to call on dealer in my line, a wholesaler well rat in Dun's and not regarded as very a proachable by salesmen. When I was show into his office, he was none other than m stage farmer, who actually was a farme and ran his wholesale business as a si line. There he was, boots, heavy cloth and all, but with a heart as big as a buffal He gave me a large order, and thanked m again and again for my civility, and took m protestation that I liked an upper berth merely an additional courtesy.

'I have heard that civility pays, al self-sacrifice. I cannot say this was eithe but it paid. However, it did show that one has any courtesy to display, one migh as well show it to the first man one mee instead of trying to pick some speci object.'

ɾ ɾ ɾ

'Someone in Congress,' remarked ***th Traveler,*** 'has announced once more tha the American farmer is in danger of "sink ing to the status of the old-country peasant. I don't know what is meant by sinking t that condition. European peasants ar usually comfortable, often well-to-do, an quite often fabulously wealthy.

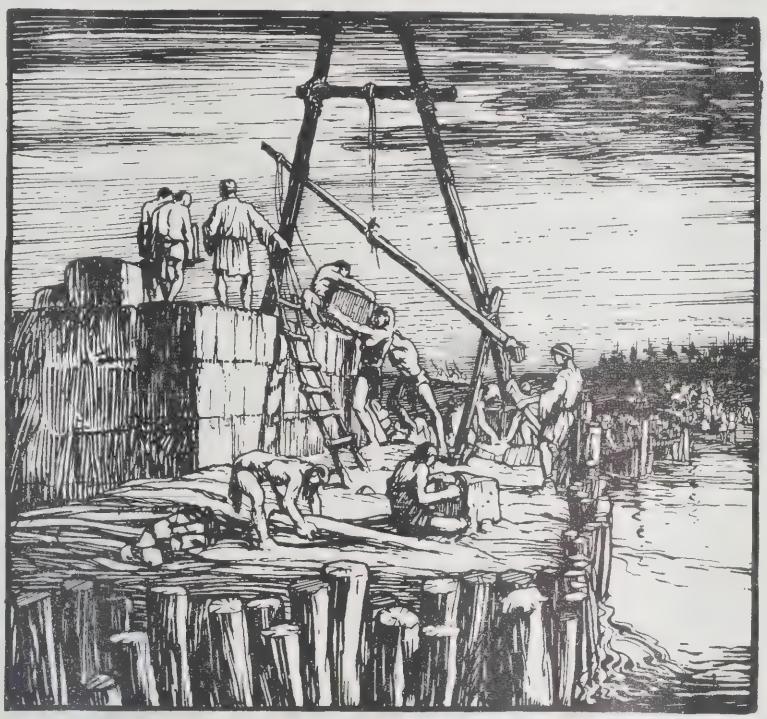
'In Continental Europe the wealth o peasants, of wooden-shoed and rudel dressed countrymen, is so proverbial tha it is the subject of many stories. In Hungar they tell of a peasant who was refused room at a hotel in a big city. He immediatel bought a house for 200,000 gulden (a gulde represents about forty cents at the presen rate of exchange), so that he would have room to sleep in when he came to town

'The peasants have money, because fo centuries they have been making all thei own clothes as well as the material for them Their flocks and herds increase, and thei farms develop. The money they receive a market has been hoarded. Many a American tourist, traveling in his moto car, has passed a rough, homely old peasan at the roadside, clumping along in hi wooden shoes. The American takes i for granted that the rough old man is poo Yet the odd corners of his thatched cottag might contain more gold and silver than th total of the American's bank account

Where the People of the British Isles Came From

(*Continued from page 7*)

them into shape. But they were bigger now, and whiter, and more fearless, and the Anglo-Saxon sons had a way somewhat of clipping the claws of that age-long mother, and they somewhat tamed the brutal harshness of her maternal handling. Not only did they warm her freezing winter breath within their homes and span her drowning torrents, but they felled her forest growths and compelled her bosom to yield such a rich and abundant food that larger numbers of them than before could gather into cities where contact brought plans of developing culture and control. Those Anglo-Saxons not only tamed their mother-by-adoption, but they also usurped part of her control over her children and, as elder brothers—not by birthright but by racial might—fixed their names to cities broadcast over all of England, Scotland, and Ireland, and enforced Anglo-Saxon law and order on their fellow citizens.



The Romans under Caesar came to the British Isles in 55 B. C., and left much of Roman blood and Roman culture.

SO THINGS were going when in 787 the first invasion of the Vikings occurred. The Vikings were of the same Teutonic race as the Anglo-Saxons. They came from the same Danish peninsula, its adjoining islands and the shores of Sweden and Norway across the narrow Skagerrak and Kattegat. For 250 years these heathen Vikings were the terrors of Britain. At last they conquered it. Capped with iron helmets and clad in shirts of mail, these swift dauntless men were justly called 'Wolves of the Sea.' The 'fierce blue-eyed giants of the north' long stalked as lords over the land. Their great leader, Cnut, became its king in 1016 and reigned over Britain, Denmark and Norway.

But all these years the heartbeat of the people was strongest in the Anglo-Saxons, and Anglo-Saxon brain it was which planned and directed British life. The Vikings were eventually absorbed, but have left their blood markedly in the rufous Scottish giants of the north.

In 1066 William the Conqueror came across the English Channel from France, and conquered England. He was the descendant, in the fifth generation, of Rolf, the Viking, whose people wrested Normandy from the King of France on condition of settling down and adopting Christianity. The Normans brought to England the French language, a superior culture, a distinct Norman architecture and men in sufficient numbers to change the chief landowners of England and the rulers of both Church and State from Anglo-Saxon and Viking into Normans. In spite of this the body of the Saxon laws remained in force by the choice and will of the king.'

That was the last conquest of England. For nearly 860 years England has stood in her insular isolation, dauntless and unconquered. Anglo-Saxon blood and English environment long since made over the sons of Normandy into Anglo-Saxon Englishmen. Ceaselessly they pursued the non-Anglo-Saxon Welsh, Irish, and Scottish, defeating them again and again until all their lands were conquered. The English language well illustrates this Anglo-Saxon dominance. It is made up of Celtic, Anglo-Saxon, Scandinavian, and Norman-French words, with contributions from many other sources. But the warp and woof of the language are Anglo-Saxon, and whenever English-speaking people are thoroughly in earnest—when simple, natural and speaking from the heart—their words are mostly Anglo-Saxon.

During the 860 years in which Britain has been unconquered, fifty-four separate attacks and invasions by sea have been made upon the British Isles. All parts of the coasts of England, Scotland, Ireland, and Wales have been attacked. No matter on what coast the attack fell, it forced all these islanders to unite for rescue of their island home, because deeply written in the emotions of every Britisher is the truth that every successful invasion had resulted in a conquest. This has been proved true by seven distinctive conquering peoples: it has not once proved false. With each of those fifty-four defeated invasions the Anglo-Saxon Englishman assumed increasingly the attitude of invincibility.

Each race of men which has long maintained itself in its home area is of necessity in the grip of ideals and sentiments which are part and parcel of its psychic life. Each race or nation so situated is dominated by innate emotions and possesses deep-seated motives which cannot be quickly eradicated or even greatly changed. This is eminently true of the British people, whose characteristics have been selected and intensified in their secure island isolation. Let us here note some of the most typical characteristics of the British:

First, we may glance at certain physical characteristics. The Briton has emerged in his snug island environment with a head form more uniform than that of any other people in an area of equal size. Head form is spoken of in terms of the percentage of the width of the head to the length. In spite of the total of nine different peoples who have occupied the Isles, the ceaseless selective process of environment has produced today in Britain a type of head varying on the average only from 77 to 79 per cent. This is the most uniform type in any modern nation.

We may now turn to the psychic characteristics of the British people. One of the oldest and most fundamental of British characteristics is *love of individual independence*. This love of independence came to Britain with the Anglo-Saxons, the Scandinavians, the Vikings and the Normans.

Two vital illustrations of the Briton's individualism may be noted, one in his government and the other in his home. Germanic individualism brought to Britain three new political elements: *First*, the public assembly which is the germ of modern free legislation; *second*, the elective monarchy which developed into the principle of Anglo-Saxon constitutions; *third*, the self-developing system of law. Through their Anglo-Saxon development, and through the English Puritans to America, free self-government is sweeping the earth.

AS EARLY as 1215 the *Magna Charta* gave Englishmen the germs of five fundamental principles of Anglo-Saxon individual independence which may be also called personal liberties, namely, trial by jury, taxation only through representation, *habeas corpus*, fixed meeting places of courts, and law protection in enjoyment of life, liberty and property. A recent writer has said that today 'we find in Britain a notion of individual liberty which, on the whole, allows the individual to do pretty much anything he wants to do until some other individual sues him in court. The government is to arbitrate between the two, but is to direct neither.'

(*To be concluded in an early issue*)

I READ IN THE PAPERS

President Coolidge shook hands with 1,220 visitors in twenty-seven minutes and established what is believed to be a new speed record for hand-shaking at the White House. This was at the rate of forty-five a minute. Carrying the subject a little further, it is calculated that the Prince of Wales has shaken the hand of more than 85,000 persons in the last five years. On the eve of departure of the Duke and Duchess of York of England for their Australian tour there was some doubt whether the duchess, though young and perfectly healthy, would be able to withstand the exertions required at receptions during the six weeks. It is recalled that Queen Victoria, and before her the Georges, the Stuarts, and in fact the entire company of kings and emperors, knew nothing of the practice, and that it was King Edward who instituted the custom.

Wales the Champion Hand-Shaker

There are poor men in the Senate, of course, but the objective doesn't necessarily refer to finances.—*Publishers' Syndicate.*

ɤ ɤ ɤ

A brief summary of New York's most successful plays is given by Alexander Woollcott, dramatic critic of the *World*, in a review wherein he ponders the fate of a 'gentle play' which fails to pander to salacity. Describing the theatrical district, Mr. Woollcott says:

New York's Taste in Plays

'Down that street a misbegotten epileptic dashes out the brains of a debauched old sot who was his father. Across the way a half-crazed negro strangles with his bare hands the dusky Carmen who had thrown him down. Around the corner they are gayly trying a vulgar wench for putting a bullet into a receding gentleman friend, and in the next block they nab a lad for drowning the girl he had betrayed. Other stages, less orthodox, dally inquisitively with perversion.'

ɤ ɤ ɤ

Sometimes the mirror of the law casts a strange reflection.—*Indianapolis News.*

ɤ ɤ ɤ

Harry Carr, whose column, 'The Lancer,' is one of the highlights of the Los Angeles *Times*, often comments clearly and frankly on his near neighbors of the movie world. Anent a recent Hollywood imbroglio, he has this to say:

What Might Be Done With Charlie

'As to Charlie Chaplin's domestic affairs, there is probably much to be said on both sides. But as to the charge that he has failed to pay the United States Government his share of income tax, there is only one side. If Chaplin is shown to have been dishonest in this, he ought to be deported and never again be allowed to set foot on American soil.

'He came to this country a half-starved actor; and America made him a multi-millionaire. He has never seen fit to become a citizen. But that is a matter for his own judgment. If, however, he has abused the hospitality of this country, his case ought to be handled without gloves. And that goes for all the other foreigners—in Hollywood and out.'

ɤ ɤ ɤ

How the coal scuttles!—*Christian Science Monitor.*

ɤ ɤ ɤ

Disarmament is such a shibboleth in America that it is occasionally interesting to learn the attitude of other countries toward it. Here is the way an Italian journalist, writing in the Rome *La Tribuna* (a Fascist daily), looks upon American idealism which resulted at the Washington Conference in the scrapping of millions of dollars' worth of U. S. battleships:

What Europe Thinks of Disarmament

'It needs no further demonstration to show that the Anglo-Saxon powers, assisted by irresistible accumulations of international capital which enable them to force other nations to stabilize their currencies and to subordinate their money to the pound sterling and the dollar, plan not only to crush commercial competition, but also to dictate the financial policies of other powers, and in particular their military budgets, and thus to make themselves masters of the world's political destinies. For if the Anglo-Teutonic nations succeed in imposing upon the world the theories and ethics of Geneva, which are permeated with their own spirit, and in inflicting the moral code of Locarno and Thoiry on all humanity, they will be able to compel a reduction of armaments which will leave their own naval superiority intact and will rivet their bonds upon all other nations. In a word, the Anglo-Saxons by allying themselves with Germany, their continental cousin, and enslaving France, isolating Italy, and excommunicating Spain and South America, can crush the resistance of the Latins.'

ɤ ɤ ɤ

'It is now well known that gold had been found in California before Marshall made his epochal discovery at Sutter's Creek, near Sacramento,' writes Michael Williams, editor of *The Commonweal*, in *Current History*. 'From the earliest times there had been legends of its existence. And yet, until 1848, California had never produced any but the most meager amounts of the yellow metal which attracts the souls of men as potently as the magnet draws steel filings.

The Monks Knew About Gold

'William Heath Davis, whose book describing his own residence in California during the mission period contains a mine of information, said that the existence of gold in the Sacramento Valley and vicinity had been known to the Franciscan friars long before 1848.

'He and other chroniclers of the time unite in affirming that the knowledge was kept secret by the Franciscans, because they were acute enough to know that its knowledge would bring the Americans westward in such numbers as to overwhelm the Spanish influence and sweep away the work, that to the Franciscans seemed more important than all the results that might flow from the discovery of gold. However that may be, when the discovery came the forebodings of the Franciscan Fathers were amply justified, and San Francisco, from being the most important of the religious stations in California, became the focus of a new order of life and civilization.'

New England is a slow, backward, unenterprising section which didn't have a single bank failure last year.—*Dallas News.*

ɤ ɤ ɤ

Louis Cornaro lived to be one hundred and two years old. Born in Venice in 1464, he adopted the popular manner of living of the period, in which excessive eating and drinking held a prominent part. He became violently ill and doctors told him his end was at hand. He laughed at their fears but upon recovery adopted a rigid diet. Regaining his health, he became the founder of a system of scientific eating. At eighty-three he wrote a book called *The Temperate Life*. At eighty-six he wrote another which gave advice to high livers. At ninety-one he wrote a third volume on health and at ninety-five a fourth on the same subject. His diet consisted of twelve ounces of food daily: bread, egg yolk, meat and soup. To this he added fourteen ounces of wine.

Ate Little and Lived Long

WHEN THE DUTCH settled on Manhattan they liked the crabs that were plentiful there because they were edible and were blue and white in color. The British like the crab because it turns red when boiled.

'TRAFFIC SPIES,' large mirrors erected at the elbows of L-shaped streets, are being used in many German cities to lessen danger of collisions between motor cars on the ancient, narrow streets.

THE STORY OF CINDERELLA has been traced by an historian to the account of a young lady named Rhodopis whose sandal was carried by the wind, while she was bathing in the Nile, to the feet of the Egyptian king who offered a reward for the owner. When Rhodopis claimed her sandal the king married her.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week enters into further discussion of the signs of the times.

ɣ ɣ ɣ

The highest-priced commodity in the world today is money. Why this is so only Wall Street and the bourses of Europe can explain, and if they did explain very few persons would be the wiser. But Henry Laket, a specialist on finance, discloses some of the hidden features underlying bond issues and suggests remedies. Why debt should be the world's largest and most profitable industry causes a maelstrom of thinking. (p. 1)

ɣ ɣ ɣ

Marion Talley, the American girl who tore tradition to pieces and flashed upon the musical élite as a vocal meteor, has a hidden story that is disclosed by William L. Stidger. Marion did not emerge from her home town untried and unheard, but she did what no other prima donna has been able to do: without any 'finishing' in Europe, without the intensive study under foreign masters hitherto considered indispensable, she faced the world's critics unperturbed —and won. (p. 3)

ɣ ɣ ɣ

The desire for loot has lost many a battle and nullified the fruits of many a victory. From time immemorial the best troops have been those who did not pillage for private gain. The desire for plunder is still strong and not soldiers alone are to blame. Standards of morality that were originally military have varied little since the days of the Goths and Vandals, as Captain Elbridge Colby shows. (p. 4)

ɣ ɣ ɣ

The human element of the whole of the Eastern Hemisphere seems to have poured itself into the British Isles at one time or another, but it was the best that the then known world had to give. Professor Jenks shows conclusively that the British nation was never born. It grew as a stately tree that is from time to time grafted into renewed existence. (p. 6)

ɣ ɣ ɣ

Some books are merely books—paper, print and binding—with as much effect upon the persevering reader as a dud shell landing in a sand pit. But other books are living things. They are like friends that draw one and set the emotions vibrating. (p. 8)

ɣ ɣ ɣ

As can well be imagined skiing in the Bavarian Alps is a sport that would appeal to an American, especially when there are excitement and adventure attached to it. Irving R. Bacon gives us his actual experiences with a few thrills by the way. (p. 12)

ɣ ɣ ɣ

Beauty doctors and beauty doctoring are as old as Eden, but today there is more money spent on aids to beauty than at any time in the world's history, so Edna M. Colman tells us. Even Cleopatra's milk bath seems now out of date as a piece of feminine extravagance. (p. 14)

ɣ ɣ ɣ

Of all America's great men Benjamin Franklin stands out as the most varied in his activities, but in spite of this he is not usually identified with the abolitionist movement. A hundred years before Lincoln's proclamation Franklin was actively engaged in movements for bettering the condition of slaves and in procuring their freedom, as Alice Mac Farland shows. (p. 16)

ɣ ɣ ɣ

Some further reminiscences of Elbert Hubbard are picturesquely set forth by James W. Beckman, formerly his secretary. (p. 20)

ɣ ɣ ɣ

The following are a few more opinions from our critics, dealing with a variety of subjects, but all more or less kindly:

Tacoma, Washington.

Explicitness and candor are qualities that THE DEARBORN INDEPENDENT possesses in highest degree.

The assertion of fairness and justice appeals to any one who is seeking an unbiased viewpoint of current events.

STEWART STROMBERG.

Los Angeles, California.

Returning from the city a few days ago I picked up a copy of THE DEARBORN INDEPENDENT, dated November 19, 1926. It was the first copy I had read. The subject 'Franklyn Relics Are Found' was most interesting. Lady Franklyn was an intimate friend of my mother-in-law and gave my late husband a fine portrait of Sir John in full uniform, also a child's book called *Sparrows* and a bloodstone ring, all of which I prize highly.

MRS. FRANK ROBBINS.

New York City.

I thoroughly enjoy THE DEARBORN INDEPENDENT. It truly deserves its name —INDEPENDENT—and I feel that the news we get in it is accurate, not colored in any way to suit any particular group. That in itself is wonderful in these days, when everything seems to be under the control of something or somebody and cannot tell of events exactly as they happen, or sometimes not telling them at all.

I particularly enjoy the new department, that of answering questions. The questions you select to answer are so useful and practical. Then, too, I like your last page, the selection from some philosopher, especially the New England ones, while 'Briefly Told' is brimful of important facts. Then, too, your editorials seem to get 'better and better' every week. They certainly give us many neglected truths we can find nowhere else.

I know of no magazine with such a varied and interesting table of contents. I always enjoy Tom Masson's articles, for so many of the people he mentions are familiar and interesting. Don't let the literary part of your magazine be crowded out, ever, for the United States needs as much of it as it can get, and it seems to be getting 'scarcer and scarcer' every day.

M. C. DUNN.

HENRY LAKET is the pen name of a prominent business man of New Orleans who has made an intensive analysis of financial conditions in this country and abroad.

WILLIAM L. STIDGER, popular Methodist pastor of Kansas City, is a versatile writer and has found a congenial subject in this delightful story of the American Jenny Lind.

CAPTAIN ELBRIDGE COLBY is a writer on Army subjects whose articles are now familiar to our readers. He is in close touch with things military.

ALBERT ERNEST JENKS, professor of anthropology at the University of Minnesota, has made ethnological research one of his life studies. The peoples of Europe have received his especial attention.

IRVING R. BACON is an artist as well as a writer. This week's cover design is from his brush. He has traveled extensively.

EDNA M. COLMAN, of Washington, D. C., has done considerable writing for magazines and newspapers covering a wide field.

ALICE MAC FARLAND is a bibliographer of considerable ability. She is equally at home in literature and art, and has the knack of finding quaint facts in queer places.

JAMES W. BECKMAN was secretary to Elbert Hubbard and writes with intimate knowledge of that remarkable figure in the nation's literature.

Dogs—At Home *and* Afield

A Preacher Tells

The Inside Story *of* SINCLAIR LEWIS

And His Preacher Book

By WILLIAM L. STIDGER

Pastor, Linwood Boulevard Methodist Episcopal Church, Kansas City

FIVE years ago Dr. Edgar DeWitt Jones and I met Sinclair Lewis.

We were both lecturing in Chautauqua and had arrived in Terre Haute the same evening.

'Say Bill,' said Dr. Jones, 'Sinclair Lewis is registered at this hotel and I'd like to meet him.'

'We'll introduce ourselves. I have a bone to pick with that boy anyhow,' said I.

We had the pleasure of meeting him next morning, and he insisted upon our having lunch with him.

'I don't like that preacher, Doctor Drew, that you have in *Babbitt!*' I commenced.

We took that protest for a topic and argued all morning.

'You don't know anything about a preacher,' I told Lewis. 'I wish you would write a real preacher book; a man who lives and walks and has a being; not all good, not all bad—some of both—a human being!'

'By gosh, I'll do it! That will be my next book. I've always wanted to do a preacher book. Let me come to see you in Detroit, and live with you and talk with you and meet your people and see what it's all about,' said Lewis.

Sinclair Lewis

He came to Detroit, but only stayed a few days. He was not ready for the real laboratory work on that book.

Three years passed. He wrote to me, addressing a letter to Detroit—not knowing that preachers move. The letter was forwarded. It said: 'I am now ready to write that preacher book. I'd like to live in your home, go calling with you, see how you work, and talk with you and other preachers. Ask your wife if she will have me. Incidentally, I will want to talk over with you the reality of religion and what conversion means and a lot of things like that.'

Mr. Lewis came.

Kansas City opened its heart to him. The newspapers kept him on the front page for two weeks. He addressed the Rotary Club for the first time since *Babbitt* had alienated the affections of that organization. He addressed the Chamber of Commerce, the Ad Club; he spoke before literary clubs, he spoke in churches—several of them.

There were three outstanding episodes in Lewis' visit. The first was when he laid a watch on the pulpit in Dr. Burris Jenkins' Linwood Boulevard Christian Church and dared God to strike him dead.

Several fundamentalist preachers had been saying that God had struck Luther Burbank dead because the plant breeder had doubted. Lewis said: 'I was just defending the integrity of a real God against a false God.'

The news bureaus sent it to every corner of the United States. Within a month clippings were pouring in. It is only fair to say that the whole tale was grossly misinterpreted.

The second incident occurred at a banquet of the proposed Lincoln and Lee University. He was introduced and called upon to make a speech in spite of the fact that he had been promised that, if he would attend, he would not be called on at all. He sat between two bishops and told them to go to hell—and a few additional and even more eloquent remarks—and so passed that particular picture. The third took place when a clever advertising writer sent to Lewis' apartments a big hat which was about six feet across. This amused Kansas City and irritated Lewis—and gave the hat man some good publicity. Lewis remarked: 'I am sorry that my twelve-year-old boy isn't here. He would appreciate both the hat and the joke.

(*Continued on page 22*)

A $20,000,000 Bond Issue That Will Cost the Taxpayers $49,500,000

By HENRY LAKE

THE borrowing of money by local and state governments goes steadily on: never a voice is raised to ask if there isn't *possibly* some *other way* for government agencies to obtain money for carrying on public works. The whole system of bond issuing is simply taken for granted as the natural way. It has become a deep-rooted habit. Of course, there may *not* be a better way of raising public funds; it may be that able financiers went through all the necessary thought, philosophy and experimenting in connection with such things generations ago, centuries ago, ages ago. It may be that the modern system is the *ne plus ultra*—that there is none better.

But it strikes some beholders as strange, nevertheless—and they are quizzical about it despite the professed orthodoxy of the financing methods in operation today—that public moneys (not to speak of what is borrowed by private individuals and corporations) cannot be 'bought' at less cost to taxpayers and public than the enormous prices which lenders obtain for it. A quizzical inquirer wonders despite all precedent and authority against him why every $1,000 borrowed by the public costs approximately $2,754!

This is what the average price of money really is.

Why should Money be the highest priced thing in the world?

Those who deal in money as a commodity realize a net profit of between one hundred and fifty and three hundred per cent, while recent loans made to some foreign countries (this is not to be confused with the loans made by the American Government during the war to its associates and the Allies) yield a net return of upward of five hundred per cent!

THE local and state governments of this country have borrowed billions of dollars and are now obligated for these borrowings at prices ranging between $2,104 and $4,170 for every $1,000 obtained. Thus it is that 'nominal' rates of interest such as four and seven per cent become huge levers that exert a hidden force which raises the price of money to such a disproportion between its real worth and what it actually costs.

The childish truth of the matter is that the public does not know these seemingly elementary facts, and few if any writers undertake such chronicles. The American people are therefore submerged in a lethargy, too habituated to the authoritative commands of Money to make an inquiry, to ask questions about something which so profoundly concerns them and the future of the nation. A cloud of hand's span in size—usury—is spreading now monstrously across the American skies. A galloping rider plunges triumphantly through the rising mists—like a fifth horseman of the *Apocalypse* who rides the skies: and his name is *INTEREST*.

MONEY is *not* so obscure a subject that it should not be taught even to children in school. There comes a time in the history of every nation called great when the question rises to mandatory heights, when the evils and abuses underlying it have become so swollen that they can no longer be concealed in their grossness. That time looms not distantly for this nation, such is the huge *nominal* total of our debts, public and private; and such is the enormous geometrical reproductive power of money when wedded to interest that it is only a question of time when the country will be enveloped in the gathering mental storm of which the horizon-filling cloud and its silent galloping horseman are the precursors.

The nation has gone far already to bring down the storm and stress which is precipitated by vast and growing debts. But not too far—if the rider of the skies, that fifth horseman whose name is *INTEREST*, can be turned from his course, even ever so little.

The present system permits of an unbelievable waste of public funds, literally the throwing away of tax revenues, and it is questioned by none, in so far as its fundamental aspects are concerned. Is the usurious factor ever called to public attention, and are voters told of it? On the contrary, government officials and industrial executives would seem, in many cases, to serve a main purpose of providing fodder for the money lenders, of making government and industry mere tools with which to serve 'financial' interests. Every opportunity of making huge borrowings in the supposed interest of the public or of the stockholders of a corporation is turned to advantage to make profits for the class which professionally lends money.

At times it would seem that some great corporations, railroads, industries and governmental agencies exist only to serve as feeders for the controllers of money. In the meantime the sums of money in the hands of those who control it grow, swell to bloated and overshadowing proportions—it is the cloud now darkening the hitherto bright skies of the American people, the wet vapor settling on the body of the nation—and thunderingly overhead the horseman rides . . .

Take the case of a county which has just issued three hundred thousand dollars' worth of bonds with which to build new roads and improve old ones—secured by a gasoline tax probably. The roads will cost $300,000, but the money which they 'bought' in order to 'buy' in turn the roads will cost $826,425! This is figured at a rate of 5½ per cent for twenty years—and therefore is not an uncommon instance. But it is evident that the county—the people—are to pay, not $300,000 for new roads for their business needs and enjoyment, but almost three times that sum, and still to receive only three hundred thousand dollars' worth of improvements.

By the test which one prominent publicist suggests, namely, to ask not *How much are we spending?* but *What do we get for our money?* the answer in this case would be, We are spending $826,425 and getting for this sum roads which are costing the contractor only three hundred thousand dollars.'

The contractor, thinking that this answer reflects on his honesty, interjects a word of his own: 'But I was not the one to get the surplus $526,425—all that I received was my contract price for three hundred thousand dollars worth of roads; and that I have given full value received will be admitted by anyone who looks over the work. The rest of the money went to somebody else—not to me.'

And that is a neat presentation of the matter.

That county under some better financing system could have *twice* as many new roads for the total sum it must expend, and would have left over on hand a sum in cash equal to $226,425. But no such luck for this or any other county by the modern methods of finance!

FOR the aggregate sum to which this bond issue will mount, the taxpayers might have had their road system and a great new high school building on one of the widest streets in the finest city in the county—thus getting the school free; whereas no doubt when they want such a school building they will be forced to put out another bond issue to cover its cost—say $500,000—and obligate themselves to pay for this half-million dollars the enormous total of $1,377,375! And this new sum for which taxes must be levied would be a wholly futile waste—the half-million dollar high school's cost could have been easily taken care of

within the original obligation of more than eight hundred thousand dollars.

We thus see the pyramiding of public debt, how one unnecessary obligation after another is piled on top of those which were really necessary. This instance is typical, its counterpart may be found far and wide: the people are paying not only for the things they get but are paying extortionately. Where the public might enjoy double benefits in public works—even tripled benefits—it must skimp along with a single benefit *and yet pay for three!*

TO CITE another case. A large seaport in this country planned an immense new industrial utility to cost twenty million dollars. The press and public talked of this enterprise in terms of twenty million dollars. The local chamber of commerce let it be known all over the nation that this twenty-million-dollar utility would be added to the port facilities of their city. How proud they ought to feel now, and with what zim and gusto they might have broadcast and boosted this addition to their fair city's industrial equipment had they but said at the time that this great engineering work would represent a real cost to the taxpayers of $49,500,000 instead of a mere twenty million!

And yet the contractors did the work for twenty million and felt well repaid. The people paid the contractors that much and no more, for it was an entirely legitimate and honest transaction from top to toe. The remaining $29,500,000 will be paid by the taxpayers to others who never turned a hand—except to furnish the $20,000,000 originally required. This group receives as a bonus, premium prize or by whatsoever name it might go, nearly thirty million dollars at the end of twenty years, and gets its original twenty millions back intact!

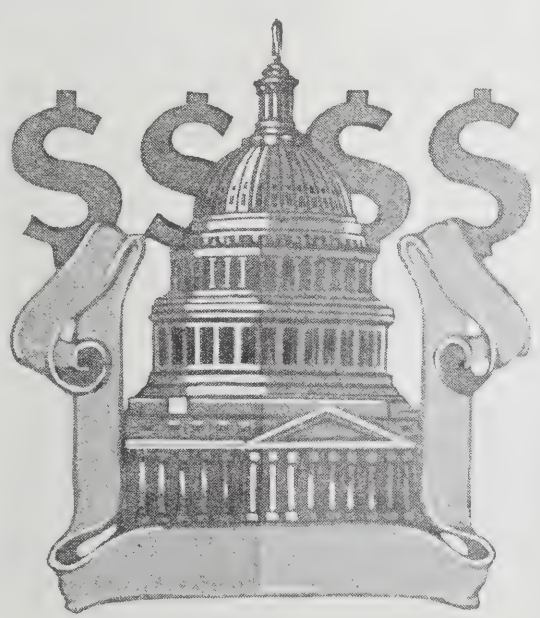
If this is finance—does it mean that all the brains are on one side, on that of the money dealers? Is that, in reality and seriously, what the word 'finance' means?

Had everyone in that large seaport city become so dulled and enthralled by usage and custom as to take such severe punishment 'lying down' as it were? To suffer a thirty-million-dollar debt to be super-added to an already heavily taxed population? To be thus incompetent to devise some better system of 'buying' funds for public use, some less usurious method, at a cheaper price than $4,950 for every $2,000 really needed? But this is not to put blame in a single place when the system above outlined is merely representative of what has already taken place in numberless cities, towns, counties and states. The people so deeply mired in the quicksands of interest-bearing bond issues needs help now—not reproach, nor pity.

The country is already in the cold grip of debt, will begin to feel the pressure, the real hurt—unless effective remedies can be evolved. A tough log, says the old saying, requires a tough wedge to split it: and so, the remedy when it is devised will be seen to be playing against the devil with his own pitchfork—a counterirritant is the solution, of which more will be said at another time.

Returning to the seaport city here referred to, there is yet a strange tale to tell, which certainly will not seem to be a rational recital, but I venture to say that it will sound quite obvious and legitimate to those who know the whys and wherefores of the money situation. Despite the fact that the municipality —which of course I leave unnamed—is thus actually tossing into the sewers, so to speak, almost $1,500,000 a year —for twenty years—receiving nothing in return either in money or property or revenue, and despite this not inconsiderable sum which the taxpayers are *compelled* to find annually and to pay out for *nothing*, these same highly intelligent taxpayers only recently, a few months ago, voted to put out still another bond issue—this time for about $8,000,000—to provide for needed public improvements, increased park acreage, a group of public buildings to form a nucleus for a civic center, and for more paved streets. These it will be admitted are worthy and ambitious public works. This construction and improvement program will represent a cash outlay of just about $8,000,000 —paid to landowners (for the park addition), and to street-paving and building contractors.

BUT for this sum in *cash*, purchased in the form of a bond issue, this municipality must in the aggregate pay the murderous sum total of $22,038,000! Of this, the owners of the land to be acquired for park purposes and the building contractors will receive eight million dollars. That is all their part of the program is worth or calls for. The rest—over $14,000,000—goes to *others*.



OF COURSE this is consistent with the modern financial system which has been outlined. The interest rate involved was *only* 5½ per cent in this case. But the strange factor of this loan is that it is being made by a city which already is wasting—literally casting into the mire—$1,500,000 in connection with the larger bond issue previously discussed. The same municipality which has plunged itself into a debt of $49,000,000 to $50,000,000 for its previous $20,000,000 loan—the same city which is thus gayly tossing away this greater sum is now borrowing, for other purposes, a further sum of $8,000,000 for which it agrees to pay more than twenty-two million dollars!

It is an act indeed worthy of being played before the gods of Olympus —only these wise gods of ancient Greece are capable of laughing the long, loud laughter which this modern tragicomedy deserves. Here is an American city, and it is not an isolated instance —they are all doing it—which could save in five years from its annual wastage of taxpayers' funds enough to raise the $8,000,000 cash required for its new civic improvements, and yet now goes out and makes a loan for this sum and doing so agrees to pay for it in time $22,000,000 or more. The ancients have it, that whom the gods love they first make mad—crazy is the present-day word. Are our people being first made mad—crazed? Certainly one instance like those I have described, or a dozen, might be condoned, understood, but that a highly intelligent nation should continue in this fashion is unthinkable.

The long lane will have a turning. The brains of the country ought to be able to fashion a new financial system. The present one is approaching a disastrous end—'modern finance' cannot survive new systems in the making, devised on truly American models and by Americans. That is to say, there appears to be a hopeful outlook for the future of financing public works, the requirements of local and state governments: but what hope may be held out in connection with private loans, commercial loans, is not quite clear.

(*This is the second of a series presenting some of the hidden features of modern finance underlying public bond issues; and suggesting possible means of offsetting the high price of money. The next article will appear in an early issue.*)

Gibson GIRLS, Gibson MEN *and the* Chicago World's Fair

By VACHEL LINDSAY

Gibson Girls by CHARLES DANA GIBSON
Reproduced by courtesy of *Collier's Weekly*

Portraits by W. W. CLARKE

THIS is not precisely a book review. I am incapable of such a thing. But it is a comment on the Gibson Girl and Gibson Man period, stimulated by many new books of reminiscences. I select for a text Mark Sullivan's carefully prepared book called *Our Times, the Turn of the Century* (1900-1904). This book is going into edition after edition, and has been received with a shout of joy by men of the type of William Allen White. Mark Sullivan used to write in *Collier's Weekly* that most effective 'Comment on Congress.' Here is recommendation enough for me. But there are many reasons why the calmest surveyor of our scene should care to look into this period. Most of it turns on the year 1900. Behold the contrast of that year to 1926! The men in power, or moving toward power in 1900, were William Jennings Bryan, Theodore Roosevelt and Woodrow Wilson. Whatever your choice of these men, the period from 1900 to 1926 represents the three-sided history their names stand for.

Sullivan has been remarkably careful in his selection of illustrations. I recommend them to every American family at once as a beginning for the restudy of this period. Mark Sullivan has other books of this type on the wing. So have we all who write. Sullivan's books will be about 1912 versus 1925 or 27, 1918 versus 1925 or 28, et cetera.

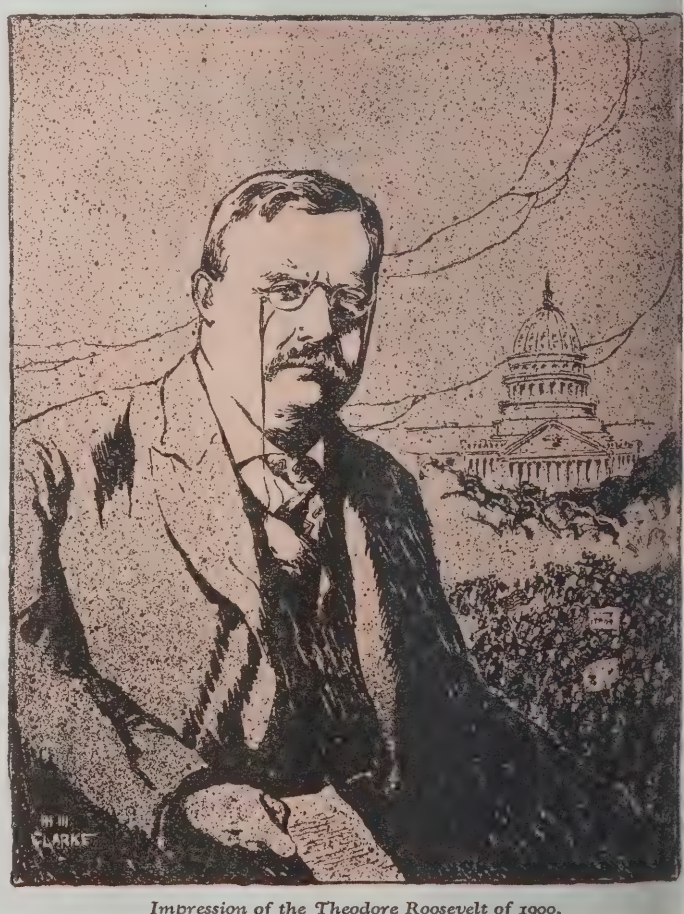
In 1900, every man in America tried unconsciously to dress like the Gibson Man. Of this, every illustration in the book is pathetic proof. There are plenty of such Gibson Men in the book, not enough Gibson Girls.

Wilson is shown at the beginning and at the end of his career—two pictures for friend or foe to study. Bryan is shown at the beginning and at the end of his career—two pictures for friend or foe to study. Of course, our Balkan Bohemians will deny that Bryan, Roosevelt, or Wilson were ever Gibson Men in their youth. Whether Gibson Men or not, in each case the decay, and yet the magnificent lines of great battle, are shown. And all three look more like American than Balkan leaders.

In the pictures of Roosevelt at the beginning and at the end, we do not observe so dramatic a change from youth to age. Yet there is that sugary transformation which makes me apprehensive when I see it in the faces of old friends. I do not want to see that fatal sagging on the face of any. The simultaneous disappearance of these three men has forced us to reflect upon the entire World's Fair, Gibson Girl, Gibson Man period. Mark Sullivan, thank Heaven! thinks well of all three statesmen: Bryan, Roosevelt, Wilson. Any decent American patriot will be in the same state of mind very soon. Mark Sullivan dislikes the kind of men who think they are, even now, smarter than all three, or more powerful than our memory of all three. Now remember, I am not attempting to review Mark Sullivan's book completely, but rather to suggest some turns of thought brought up by the period he has covered. It is the easiest way to write one's own biography, a delightful exercise.

It is my opinion, in spite of our intelligentsia, one of whom I have been for ages, that any Cyrano de Bergerac can have his own way up any alley of this Republic if he carries an ordinary cane in his hand, or even a Richard Harding Davis, Van Bibber cane. And there are no invisible powers of Mammon. Read Cyrano de Bergerac, or even Van Bibber, and give yourself a lesson in citizenship. Learn there that all you need is a big cane to beat the devil out of the opposition. You need not have a million dollars. You do not even need a lawyer or a doctor. Reread that ancient American book, Whistler's *Gentile Art of Making Enemies*. It was because Roosevelt knew about the Big Stick that the Americans welcomed him with such a shout. He had such boys around him as made good Gibson Men, dressed up, though by way of advertising, he called them 'The Congress of the Rough Riders of the World.'

Mark Sullivan does us the honor to like our three great politicians who



Impression of the Theodore Roosevelt of 1900.

have recently passed. He does not require that they be alike. Take for instance Bryan. Bryan was not so strong for the Big Stick. Roosevelt said, 'Step softly, and carry a Big Stick.' Another time Roosevelt said, 'My spear knows no brother.' But Bryan had another way with him. He was a Jacksonian and a Jeffersonian. He was, after all, in his own gentle way, combative.

He said, in substance, 'Sing them down.' And he could do it every time. The silver-tongued orator of the Platte could, till he grew old, sing down in the Democratic convention, any machine ever constructed by any boss. If it was a wet machine, it surrendered. If it was a Wall Street machine, it surrendered. If it was a newspaper machine, it surrendered. It left Bryan shouting and singing—our most triumphant poet: in many ways, our only poet, yet.

Bryan has had little mercy from our intellectuals. They do not think it is refined to admire him. They do not think it is even psychological to admire him. When Mrs. Bryan issued his biography, they all preserved their Greenwich Village regularity by skinning the entire Bryan family. But not one of them could make a speech or sing a song that could be heard across the street.

NOW comes in some autobiographical matter. I am growing gray around the ears, too; and I have just as many opinions about the period 1900 versus the period 1926 as Mark Sullivan. And I have tried to address many audiences. My publishers are willing to O. K. my boast that I have sung for a million people since I was a boy, a tramp and a beggar. When I have all my strength I can make four thousand listen an hour, and nobody will leave the room. But Bryan did not begin till Madison Square Garden was full. When he was a young man, I heard him speak to a whole state house yardful out-of-doors. He sang down seven street cars, forty sick babies, the entire voting population and two passing trains; and the Democrats carried Springfield that year.

My ancestral politics begin to appear between the cracks of this article. But any highbrow, whose brow is so high he thinks Bryan was a fool and a villain, misses the romantic totality of our Gibson period.

Let him try to get the eye of the speaker the next time the new Madison Square Garden is packed, force himself to the platform in spite of the hostile declaimer, and make everybody listen to him the while he says exactly what he pleases. Bryan was one of the illustrations of the fact that Cyrano de Bergerac is not dead. Bryan started his song where he pleased, on his own terms, and ended it his own way. Our intellectuals do not believe this because they have not read it in the papers. But Bryan scarcely spent an hour in his whole life trying to please any newspaper or press association Roosevelt's idea was 'step softly and carry a Big Stick'; and Bryan's idea was 'sing them down.' 'Gayly the troubadour.'

Impression of the William Jennings Bryan of 1900.

I have never believed in the trusts because neither Bryan nor Roosevelt ever went to jail.

As to Wilson as a statesman, all the returns are not in. I have written a poem of thirty stanzas of which Wilson is the hero, and in which he is compared to Socrates. And, moreover, in plain prose, I call him a Gibson Man, with the others. None but a Balkan conspirator will deny it. There is more in the classification than meets the eye. There is a lot more to the Gibson Girl, Gibson Man, Chicago World's Fair civilization than I have begun to suggest.

Obviously.

From Mark Sullivan's book I would like to name one or two of the best titles of chapters. 'The Nineties.' The Nifty Nineties, or the Gay Nineties, as now cartooned in *Life*, give the key, not only to this chapter, but to many chapters. The Gibson Girl, still the perfect flower of American life, who is every so often swatted by Gibson's own magazine, with great good humor on the part of Gibson, is treated with far more gallantry by Mark Sullivan. She was, and she is perfect womanhood. It may be that Gibson is getting tired of exploiting the type in public. But America is returning to the Gibson Girl and the Gibson Man, and to reminiscences of the Chicago World's Fair days. Gibson Girls appear on our streets in spite of the Balkan States, and in spite of the flapper's arrogance. Sooner or later we will have the Gibson Girl versus the Mrs. Abraham Lincoln type! The present movie flapper, just one generation from the steerage, will be nowhere in the argument. Lee Wilson Dodd has a great deal to say that is worth while about the Gibson Girl in the Vassar Alumnae Quarterly. He is a little too sad about her, but he admits that she exists eternally. If you want to get the Mrs. Abraham Lincoln type, read Carl Sand-

Japan *Looks to* America *to* Prevent Wars

Freedom *From* Extra Taxation *for* Armaments What They Most Want

By INEZ MARKS LOWDERMILK

JAPAN had one of the most memorable and far-reaching gatherings ever held on the Pacific shores in the third Pan-Pacific Science Congress recently convened in Tokio. Japan set a very high standard for this congress and not only reached it, but, in the opinion of the delegates, as a nation laid greater stress on science and conferred more royal honors upon the scientists than have ever been showered upon the intelligentsia of any of the sixteen countries represented.

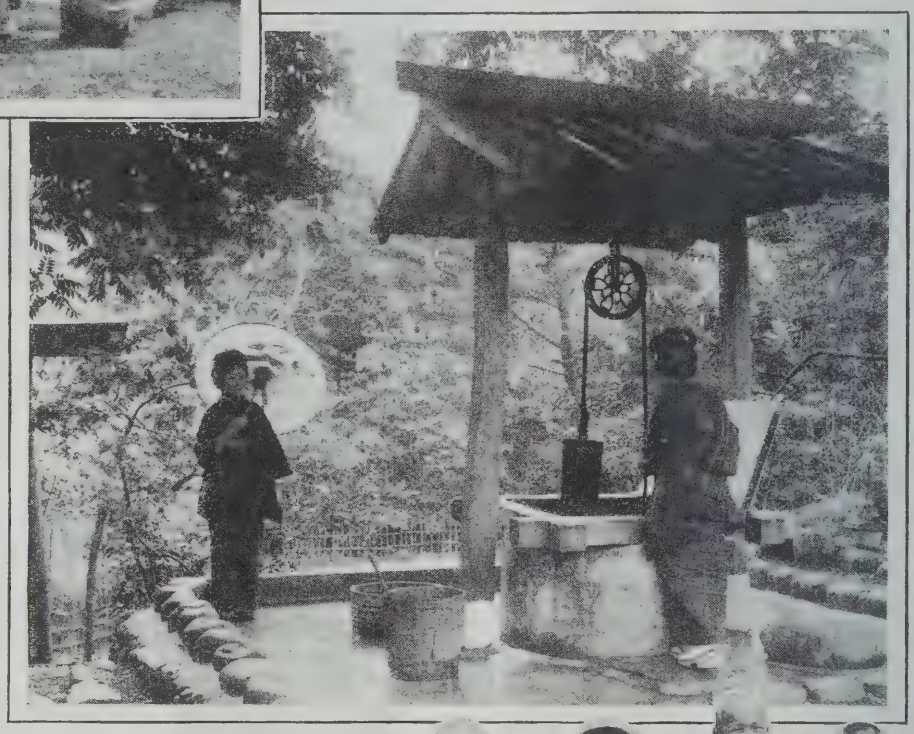
The Pacific will more and more become the theater of world events. But so thoroughly is the outlook of American people based upon a background of European contact that we scarcely realize we are not only on the Pacific, but, along with the nations of Asia, a part of the great Pacific area which in extent covers half the globe and includes sixteen nationalities. Now that all the nations of the world must live under the same roof, the more quickly we come to understand and appreciate the good, each in the other, the more assured we can be that the Pacific will remain an area of peace.

Months ago the Japanese Government issued invitations to the leading scientific organizations of all the countries bordering on the Pacific basin, from the North Seas to the South Seas, to select delegates to represent their organizations at this great Pan-Pacific Science Congress in Tokio. One hundred and seventy delegates, representing all the Pacific countries and leading scientific bodies, met with the four hundred Japanese delegates as guests of the Imperial Government of Japan for an entire month, from October 25 to November 25, 1926.

Surely the Japanese are the most charming hosts in the world and an succeeding congress will find it mos difficult to equal the standard set b them. Sociall these men of sc ence found them selves ranked wit the highest in th empire. While th mornings wer occupied with pro found discussion and papers o ethnology, ocean ography, seismol ogy, biology, agri culture, forestry geology, botany hydrology, e cetera, the after noons and eve nings were devote to entertainment and courtesies The months o forethought an planning of de tails made the sta one of comfort pleasure an happy surprises.

When in mid ocean we receive a radio message— 'Welcome to Japa nese shores.' N matter at wha port delegate disembarked, governmen representative me the boat, and, with as quiet modesty as though hand ing out free ticket to a ball game presented each delegate with a pass over all the railway lines of Japan fo an entire month, with the privilege o traveling through Korea for an addi tional two weeks if one so desired.

All delegates were entertained i the large four-million-dollar earth quake-proof Imperial Hotel. No sooner were we established in our rooms than we were presented with armfuls o



Above—Japanese beauties on their native shores.

Center—Old Oaken Bucket in a picturesque Japanese garden.—E. M. Newman, from Publishers' Photo Service.

Below—More than ninety-nine per cent of the children of Japan are in school.

iterature, books, maps, gifts, books
f meal tickets, badges and twenty or
nore invitations to banquets, teas,
arden parties, luncheons, theater
arties, et cetera. Our hosts for these
vents were the Emperor, Prince Re-
ent, several of the most powerful
rinces of Japan, the president of the
mperial University, the president of
he House of Peers, several of the
ichest barons and baronesses of Japan,
he mayor of Tokio, and others of
imilar rank. Such royal and charming
ntertainment; such evidences of friend-
ness from the school children who in
ome places came out *en masse* to line
he streets and cheer and smile; in-
eed, such courtesy from all classes
ill do much to strengthen the bonds
f international friendship. Besides
hese social events in the 'Paris of the
rient,' ten days were given over to
he most delightful excursions to several
f the famous scenic places of Japan.
No spot in the world can be more en-
hanting than Japan when robed in
er gorgeous tapestry of autumn colors.
urrounded as Japan is by the all-
ervading sense of beauty, it is not
urprising that the Japanese have been
alled the most artistic people in the
orld. The children from babyhood
re 'exposed' to pictures of beauty and
aught to appreciate the artistic wher-
ver found. We, too, felt a desire to
orship the beautiful when the riotous
eauty of Nikko and Hocone burst
pon us. Or when, for two days we
oured by motor and yacht around the
ake region at the foot of the superb
nd matchless Mount Fujiyama.

One delightful thing about Japan is
hat she looks just like the pictures of her, only more so. Matsushima Bay, with its 249 little isles clad in fantastic, gnarled old pine trees; the Inland Sea; Kioto, with her ancient, well-preserved palaces; and the incomparable landscape gardening of the old feudal private gardens in Tokio and Kioto are pictures of surpassing beauty.

The congress was unique in that, in a way, it represented a 'coming out party' or a 'graduation exercise' of the Japanese scientists from their studies in Western science. Japan has been accused of only copying Western science and not contributing. This criticism will have to be relegated to past history, for it is no longer true. All the scientists agreed that Japan is now abreast of the foremost scientific thought in the world today.

For years Japan has been spending great sums of money and sending her best and most mature brains to study in other countries the foremost thought and most successful methods of applied Western science. These men have returned to Japan, and, assisted by a stable and well-organized government, have grafted onto Japanese civilization the best of what they have found. The result has been astounding. The world scientists in attendance at the congress found themselves placing Japanese scientific work on a par with and in some fields in advance of that done in other countries. Each in his own field felt that Japan was making valuable contributions to world science.

Interesting comments were heard frequently from the delegates of the various nations such as, 'Japan undoubtedly has the best educational system in the world today.' In comment, the writer wishes to say that less than one per cent of the Japanese population of school age and above have received less than the education of the three R's. Ninety-nine per cent of the children are in school and their unusually clean and healthy appearance is proof of the constant and careful medical supervision of the past decade.

The Japanese educational system goes on the basis that 'all children are not created mentally equal.' The children of lesser ability, after a foundation in essentials, are weeded out into other training according to their capacity, while the mentally alert are given even greater opportunity for development and self-expression.

One frequently hears it said that Japan has done more in reforestation, torrent correction and erosion control than has any other country. We traveled from one end of the islands to the other and saw *(Continued on page 24)*

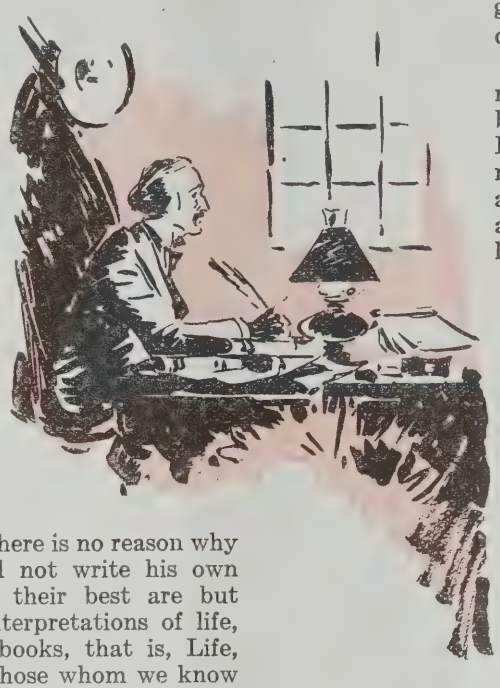
Every Person *Has at Least* ONE BOOK *in Him*

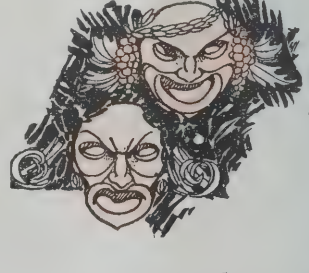
I SEE as many writers and books as the average man, and maybe more unknown writers and never-to-be-known books than most. Indeed, I have in a corner of my library the beginning of a museum of obscure oddities, and another more honorable section of printed pieces begotten in sincerity but brought forth in much unskilfulness, all of them surely destined for the basket and the fire, but I have saved them for a purpose which, though not quite clear to myself, is certainly not one of belittlement. There is no reason why every man should not write his own book. Books at their best are but transcripts and interpretations of life, and the stuff of books, that is, Life, is not limited to those whom we know as authors. Every person has at least one book in him, and unless his creative life lies higher than the realm of letters, that book might as well be written. One man I know has written forty volumes, though not one of them has been published. They are the sketchbooks of his thoughts and actions, his circumstances and friends, a picture of his times seen through his personal experience, and such a record cannot fail of quality and importance. A century hence it cannot avoid being of value.



Anyone can 'commence author' after this fashion. If one cannot find a book that exactly suits one's need, why not write one? I often hear people expressing the wish that there were a history of the United States which they could read, and when I know them well enough to do so, I say, 'Why don't you write one?' There are a hundred best books waiting to be written, and I cannot see why some of them should not be written this way.

WHEN good plays became scarce in our town, and the theater departed too far from the life of the people, what happened? A most wonderful thing, it seems to me: a number of men who would probably not win high rating from the highbrows, started a Little Theater or Players' Club. They had next to nothing at first—a borrowed room, with no platform. It reminded me in a way of that Hall in the Middle Temple where Shakespeare gave a new play on a stage six inches from the ground, without curtain or scenery.

Last night, after many years, I went back to see these Players. They have now a clubhouse and theater which architecturally is a landmark, and an organization which culturally is to me significant of the times. They assured me on every hand that they were not 'serious,' that they were not trying to 'uplift the stage,' and used other expressions by which Americans, men especially, veil the deeper aspects of their attitude. It was a precious lot of trouble to be undertaken for nothing in particular! Here were about four hundred men, some of them millionaires, some of them in the minor categories of salaried employes, gathered about something which goes unnamed. He would probably be voted a booby who should say they were gathered about an ideal. Yet there are no profits since there is no ticket-selling; there is only cost. All the fun has hard work attachments. The club features are had by most of the members in more luxurious degree at other places. The social values can be duplicated endlessly through the city. It is certainly around none of these things that the four hundred odd members are gathered.



Neither are they seeking in private to push the drama's nose farther into filth than public presentations would permit. These Players have no public but themselves and could go as far as they pleased. Their progress, however, is not in that direction. I would not say that on moral grounds they abstain, I would say that on dramatic grounds they find it beneath the level of the art. They tell me that one night, after their plays had been given, famous visiting actor was introduced t the Players and invited to make a fe remarks. He told a story that wa somewhat high in its color, and wa puzzled at the distinct absence of ap plause as he sat down. The grea danger of relating such an incident i that it puts me in danger of bein thought a prude who praises pruder wherever he finds it, and it puts th players in danger of having the virility underestimated. Neither judg ment would be true. A devotion to th drama, as to any other art or science makes for dignity in the *ensembl* even if individuals do occasionally un bend in private.

I SAW four plays and heard on original poem, then lunch was serve at tables permanently set befor the spectators' seats, and after lunc we saw innumerable skits, which to gether would have made a notabl program had they not followed th nobler offering of the plays. This i one night, with an hour or so clipped o the coming day. It meant work—out siders cannot guess how much. I saw scene-shifter who is worth thirty millio dollars. In the drama a master o stage mechanics has as high a plac as the tragedian. The man who handle the lights thinks he has—and is ad mitted to have—as important a rôl as the Player out front. In fact, bot wear the same title—Player So-and-So 'Let not the hand say to the foot, have no need of thee,' as is so ofte done in industry and business.

I met a business man who ha written a delicate fairy play for th children. Manager of a big business he writes, plays, shifts scenery or enter tains guests with equal zest. Th equality freely granted all parts of th work set me thinking. Equality of im portance *is* everywhere, but where is i recognized? In churc I sometimes hear i mentioned, but neve see it observed. I politics it was once cardinal principle, bu now it is blah. Doe it remain for the arts the communal arts like the drama, t prove the equality o service in the only wa it can be proved? The only way, o course, is not ours, but nature's—o necessity's.

The point is—when these me wanted the essence of the drama, the got it out of themselves and not out o a box office. None of them has bee bitten by the stage craze. They are no living in hope of a place on some pro ducer's salary sheet. They are workin out a spiritual impulse in a natural way When they want a good play, they writ one, and act it.

Finance Must Get Into Step

THE time has come when principles found to be practicable, profitable and more just in some lines of work, must be applied to all lines. The suggestion will meet with general acceptance, but the wise ones of the world will perhaps regard it as an innocent and childlike method of instructing them in what they already know. However, it is not so innocent as it seems.

Restrict the principle to industrial methods, and of course the matter is simple. It was not many years ago that the mass production system, successfully adopted by one concern, was said to be impossible for any other concern. Then, as other concerns took it up, it was said to be impossible for any other kind of manufacture. First they said it was only Ford cars that could be made that way and then as other automobile concerns adopted at large the method, they turned and said that it was all right for the motor industry, but could not be applied to any other branch of industry. But as two plus two makes four everywhere and right principles are not susceptible to heat or cold, it came to pass that many industries, not even remotely related to motors, took up the plan, until the glass in the window, the bread in the pantry, the ice in the refrigerator, the books in the library—almost everything we use is produced according to the new method.

THE principle of mass production making for saving and service has been applied to almost everything we use except money. 'It is all right for industry, but you can't apply it to finance,' say the Money Brokers. The time has come, however, when the methods and motives of the best industrial concerns must be applied to Banking, or Finance will find itself outside the lines of tolerance. An advanced age industrially will not continue to walk side by side with an out-of-date financial system.

So far, it is innocent enough. Economy of time, energy, cost, is of undoubted advantage. Fortunately the new method brought with it a new attitude toward the worker, his wage, leisure and conditions of labor. Nothing could possibly have excused the absorption by owners or stockholders of the added benefits of industry under the new system; every moral and economic consideration pointed to the desirability of a distribution of the benefits. Of course, it is not so everywhere as yet; and even where it is an accepted rule of business procedure it has by no means reached its full development; but it is present in sufficient importance to illustrate the rule that enlightened practice is accompanied by enlightened policy, and that a good principle cannot be monopolized—it must be generally spread.

Very well, then; with that understood, let us go on. All of this improvement in industry brought with it a great increase in business. Reduced costs created a wider market, increased wages financed that market for purchases. No department of human interest or importance escaped the strengthened pulsations of economic vigor.

But back of the scenes there stood one interest whose attitude was, and still remains this: 'We will profit by this new principle in business, but we will not adopt it.' Just as people had formerly said, 'This new method is all right for the automobile business, but you couldn't apply it to shoemaking,' so the Money Brokers are now saying, 'It is all right for industry, but you can't apply it in Finance.'

That is, an advanced age industrially, is walking side by side with an out-of-date financial system. The simplest and most fundamental principles of business—the largest extension of service to all at the lowest possible cost—has not penetrated the minds of the Money Brokers. Service has become more and more restricted, partial, and costly to the public. The alliance between Money Brokerage and Industry has usually resulted in disaster for the latter and misuse of the public dependent on it. Money which is a Public Privilege, a Public Asset, Publicly Owned, has been made a private concession in the control of men whose interests are the most limited and whose vision is the least social of any in the country.

It is not surprising, nor is it a case for denunciation, but rather for understanding. The theory of Money Brokerage is that money is a magnet drawing more and more to itself. As compared with Industry's interest in its job and its service, the attitude of Money Brokerage of *interest in its interest*, seems the height of shortsightedness. The highest possible dividends have been demanded, so that honest management has been constantly harassed between the demands of the service and the demands of the debt, until all advance has been a compromise between how little can be given the people and how much can be got out of them.

Obviously such a state of affairs is completely out of step with present progress and present requirements, and it must change or the general status must change. These two things—service in industry and selfishness in finance—cannot go much farther together. Either money brokerage will incorporate the principles of saving and service, or it will find itself outside the lines of tolerance. To suggest that anything so important as money can escape the obligations of economy and service, low cost and high values, is to suggest the impossible. The methods and motives of the best industrial concerns must be applied to banking, not to the mere conduct of a banking house, but to the principles underlying the entire business. The time for that is come.

EDITORIALS

OF THE DEARBORN INDEPENDENT

A Lesson From the Orient

THERE is no question that a ship canal connecting the Great Lakes with the Atlantic Ocean is highly desirable as a commercial asset to Canada and a great part of the United States. To a lesser degree the Illinois Waterway, joining the Lakes and the Mississippi River, means much to the Middle West. These projects should become realities and probably will be as soon as their utility is fully appreciated.

But one important question must be settled first: To what extent will these connecting links 'internationalize' the Great Lakes and the Mississippi River? That is not merely an academic question. European—and American—gunboats now ply the Yangtze-kiang River far into the interior of China. Every time the issue has been raised, in Asia and Africa and Central and South America, the voice of this country has been for 'internationalization.' But the matter comes more closely home when it is considered in connection with the War of 1812.

At the council for peace negotiations following that war England insisted upon the right of navigation on the Mississippi, under conditions similar to those which now apply to the Yangtze and other internationalized rivers. The English claimed this right by virtue of the Treaty of London, 1794, but had allowed it to elapse. Henry Clay led the fight of the American Peace Delegation against it, and a compromise was effected, providing in substance that the right would lapse 'unless' it could be shown that a navigable portion of the system lies in Canada. What effect this provision in the Treaty of Ghent, signed 112 years ago, will have should the upper Mississippi and the Great Lakes be made navigable to ocean-going vessels remains to be seen. The matter should be definitely settled before either project is undertaken.

An Unofficial Dictator

ORDERS have gone forth to Poland. New laws must be passed, old laws rescinded. The nation's labor system must be changed, its social services, its taxation, its state monopolies and customs. The Polish Government *must* do this—must *not* do that.

These orders do not come from some super-government, such as the League of Nations, nor yet from Marshal Pilsudski, the dictator. They come from the American money trust. The New York *World*, under Warsaw date line, tells the story:

> Regarding the $100,000,000 loan which a Polish financial mission in America is seeking . . . the *World* was reliably informed today that the prospective lenders are making the loan conditional on *immediate adoption* by the Polish Government of the financial and banking reforms recommended by Professor E. W. Kemmerer.

The mysterious Mr. Kemmerer again! International traveling man for the Gold Standard. A mild professor who somehow wields a power that rivals armies and navies. Messenger of the Mighty Dollar to the benighted nations of the earth!

Mr. Kemmerer is one of the most interesting, and at the same time least known individuals in America. A private citizen, he has headed numerous 'American Financial Missions' to foreign countries. Governments have a strange way of 'inviting' him to recommend reorganization of their finances. He has no discoverable official status, but his 'recommendations' are backed up, apparently, by the strongest power in the world. Egypt, Mexico, the Union of South Africa, Guatemala, Colombia, Chile, the Philippines and Poland have been favored with his visits in the past; Ecuador and Bolivia are the present beneficiaries. It may be only coincidence that the countries which he visits are seeking loans from the international money lenders. But it is something more than coincidence that his visits are almost invariably followed by establishment of the gold standard, centralized banking and other tenets of the money trust.

—But Not Forgotten

THE 69th Congress passes into history with few regrets from the nation. Its achievements, most of them, were better left undone; its omissions were as silly as its acts. It was the Senate of the 69th Congress which voted the United States into the World Court and then sang hallelujahs of relief when that body rejected its reservations. It was the 69th Congress which passed the McNary-Haugen Bill, fortunately vetoed, and the McFadden Banking Bill, unfortunately not vetoed. Ignoring a mandate of the Constitution, the 69th Congress took no action on reapportionment, leaving the country unequally and unfairly represented as regards population. It did nothing constructive for prohibition; it shilly-shallied on Muscle Shoals and the Power Trust; and took no definite stand on the political scandals which have shaken the country. Doubtless there have been worse Congresses than the 69th; but we do not remember them offhand.

Two Courts

TWO courts have passed on Messrs. Doheny and Fall. Once they were found not guilty of conspiring to defraud the Government in connection with the leasing of the Elk Hills oil reserve. Now the Supreme Court of the United States has just found that the evidence of conspiracy, fraud and corruption is clear and unmistakable. The justices were unanimous in their decision.

'The whole transaction was tainted with corruption,' they declared. Other statements in their opinion were equally vigorous: 'The interest and influence of Fall as well as his official action were corruptly secured by Doheny for the making of the contracts and leases.'—'It is clear that at the instance of Doheny, Fall so favored the making of these contracts and leases that it was impossible for him loyally or faithfully to serve the interests of the United States.'—'The contracts and leases . . . constitute a single transaction not authorized by law and consummated by conspiracy, corruption and fraud.' Finding thus, the Supreme Court broke the leases, estimated to be worth at least $200,000,000 to Doheny, and refused even to allow the return to Doheny of the $11,000,000 he spent in carrying out his part of the agreement.

Ordinarily judges of the Supreme Court are more cautious than other persons; it is natural to expect that they would be reserved in denouncing individuals who come to plead before them. Yet here they go full length in denouncing the Doheny-Fall deal as marked by fraud, conspiracy and corruption. It is at least authoritative and conclusive.

Witless

THE attempt to impeach Judge Frank Cooper of the U. S. District Court for Northern New York has ended in failure. The refusal of the House Judiciary Committee to take action after hearing the 'evidence' serves not only as a vindication of Judge Cooper but as a rebuke to his detractors.

Judge Cooper was charged with the remarkable crime of upholding his country's prohibition law. He was accused of calling attention of enforcement officers to law violations, of urging the arrest of bootleggers and rum runners. On this ground Representative Fiorelle La Guardia of the East Side of New York and Representative Emanuel Celler of Brooklyn sought to have him removed from office. If their purpose was to display their own contempt for the prohibition law, the course they took was unnecessary. Mr. La Guardia has already made himself noteworthy along this line with his publicly broadcast beer formulas, while Mr. Celler's views are well known in his own district, the only place where they are of much importance. If their purpose was to cast discredit on Judge Cooper or on the law itself, their action was witless. The theory that a judge cannot take an interest in law enforcement is too ridiculous to merit consideration. And if their purpose was to intimidate other federal judges in this attitude toward the Volstead Act, this, too, has failed. The weapon of impeachment is one of the most important in America. Misused, it is a boomerang.

Sugar Weather

THE wind may blow cold from the north but the southern side of the sugar bush is warm with sunlight. Skunk cabbage sprouts in patches of snow, in sharp contrast with the barren spring landscape. That querulous philosopher the nuthatch, perched on the bark of the maple, watches the tree-tapping. He creeps about upside down nervously picking the bark in search of insects. His 'yank! yank!' is heard from early morning until night. The maples stand bare and gray like Druids on the hillsides. The first sap is very sweet. It is cold, too, and makes the throat ache to drink it. The creek is flooded and schoolboys ride the thin floes to where they jam at the bend, the water backing and overflowing the low banks into the woodland. The first bluebird flits along a hedge and in an elm a robin sings of sunny days to come.

The Third Term

THE attempt to incorporate the 'third-term tradition' into the Constitution will probably get nowhere. As a tradition, the 'third-term' custom serves a useful purpose; as a law it would lose such value as it now has. So far the country has never been convinced of the desirability of any President's selection for a third time. It is just conceivable, however, that in a time of crisis the nation might require a President to serve more than two terms. But to limit the office arbitrarily to eight years or ten or any other number, as is now proposed, is to bind the future generations without any apparent reason; it is to distrust the people's wisdom.

Washington's refusal to be a third-term candidate—from which the third-term tradition dates—was wise statesmanship and an excellent psychological move. It did as much as any other single thing to establish the Republic on a firm foundation, for it definitely ended the possibilities, and the fear, of Caesarism. The new nation was pitifully weak; the federal government was still an experiment; predictions were rife it would fail. But the Republic is weak no longer. Caesarism or any form of monarchy is unthinkable. The third-term tradition, once of greatest import, has now become a dubious political weapon. The people who elect the President are the best judges of his service. They have the Constitution to define their rights; they have tradition to define the national continuity of attitude; they have their own good sense to guide them in the immediate instance. They are at full liberty as to their Presidents. They can elect them and impeach them; they can defeat them; they can elect them indefinitely if they choose. And this liberty must remain, unrestricted by statutes.

People *of the* BRITISH ISLES—*The* English

By ALBERT ERNEST JENKS

Illustrated by GERALD VAN DER HEYDEN

Copyright, 1927 by A. E. JENKS

IN ENGLAND a man's home is his castle. He is not only master of the household, but was, until recently, the teacher of his children and the dispenser of family religion. And just as far as possible the Englishman seeks to make his home distinctively his own, like himself. It is planned, built and maintained to tell its part of the story of a distinctive individual. It is often retained in the same family for hundreds of years. It is, as it were, quite immortal, and each strong head of the family tries to leave the home so that it will tell his chapter in the running story of the family.

The geographic isolation of Britain has produced ethnic isolation. Teutonic individualism and the age-long success of the surviving people of England, coupled with its insular position, intensified this natural individualism and love of independence. A century ago the romanticist Novalis, in emphasizing the individualism of the Englishman, said, 'Every Englishman is an island.'

With this individual isolation has grown another of the Englishman's most pronounced characteristics: *Self-restraint and unemotionalism.* An English woman recently wrote: 'As a nation we have certainly brought disguise of our feelings to a fine art, and this characteristic is dear to the heart of the race.'

It was my experience in the summer of 1914, in common with many other Americans, to see the labored heart-beats of nations which felt that terrible war was upon them. Throughout August I saw day by day in various provinces of Austria and Hungary recruits assemble and march away to war. Everywhere they were cheered by their fellows. Even the women who trudged for as long a distance as possible beside their husbands and lovers smiled through their tears, as enthusiastic cheers along the streets greeted their men. In September I was in England. Raw recruits in civilian dress were marching along the city streets. English citizens stood on the curb and watched the recruits go by. There were no cheers. Fathers and mothers whose sons had responded to the call 'Your King and your Country need you!' stood mute and motionless as they marched away. Among the spectators were stiffened old soldiers in their red coats, but not a sign of the emotion which must certainly have stirred them was audible or visible. Even the spontaneous song bursting from the rhythmic tramping recruits, 'Fare Thee Well, for I Must Leave Thee!' brought no response from the dumb and motionless spectators.

A regular correspondent of the London weekly, *Land and Water*, said: 'We are not at all ashamed of the impulse which makes us stand still to watch the passing of a battalion of Kitchener's army as it marches along . . . The dread of anything approaching emotion, of what we are pleased to call bad form, is the strongest of motives, accounting for much that is quite incomprehensible to people of other nationalities.' The correspondent goes on: 'One attractive Washingtonian, waving a minute handkerchief vigorously, was forcible in her disapproval of English methods. "You watch your new army," she said, indignantly, "but why don't you give them a cheer? Now, if it were we—!" And no amount of excuse for the true Britisher and his truly British habits would satisfy her.'

Self-restraint checks speech as well as emotion in the Englishman. Even in his toil he is not talkative. It has been said that two English laborers will work together all day with scarcely a word between them. Bosanquet says it is easier for the Englishman to work out a situation in actual achievement than for him to express his ideas of the situation in spoken words. He has not acquired the art of easy speech. As Kipling has it,

> Deeper than speech our love, stronger than life our tether,
> But we do not fall on the neck nor kiss when we come together.

British oratory is Celtic (Welsh, Scottish, or Irish) rather than Anglo-Saxon English. The names of Edmund Burke, Charles James Fox and Daniel O'Connell come to us all, proclaiming alike the princely orator and the Celt. Self-restraint produced men of action rather than orators.

Self-restraint has checked the tendency to nimble oral wit and humorous utterance in appreciation of the incongruities of life. The Englishman is commonly said to be without humor. This statement is untrue. Nowhere is there richer humor than in English literature, but in English conversation and chance remarks there is none as compared with the pawky humor of the Scot and the lightning flash of Irish speech. One would probably be correct should he say that the Englishman would consider the indirect sally and the lightness of wit and humor as 'bad form' for him.

With and out of this unemotionalism

I saw houses thatched with grass, built in the 14th and 16th Centuries, the houses where for hundreds of years the present tenants' ancestors had lived.

and self-restraint grows a third English characteristic, *utilitarianism*, producing men who deal with things and facts rather than with theories.

Someone says there is nothing so real to the Englishman as the thing he does with his hands by the sweat of his brow. These are the things he knows best and believes in. There is no closer bond between one Englishman and another than that of doing the same thing. The Englishman has a passion for utility—for driving good nails into good timber for good.

He is matter-of-fact, logical and practical. Theories do not allure him. It has been said of the Englishman: 'An idea is of little use to him unless it can be materialized or expressed in action.' Again: 'It is in the sphere of will and action and practical intelligence that the English qualities surpass.'

Facts are always demanded by the Englishman. He demands more facts than any other man, but when once convinced by facts, his decision endures, because facts endure. In this, that he takes facts most literally, we have another reason for his lack of humor in spoken words. He seems to be unusually able to meet facts, whether good or bad.

The Englishman has the single-track mind. He puts all his energy into the one thing he does. With the real things he can see, count, weigh, handle, use, and appropriate, he is at home. He is essentially not versatile, but busy with a few practical things.

Another important and natural characteristic of the insular Englishman is his *conservatism*. He makes progress by compromise under necessity. In both private and governmental matters he is a conservative. This means that he honors his past which has made him what he is. If things are English, he is not anxious to change them. He is quite satisfied if they remain as they are, English. He is much slower to change things from what they are to what they might be than one would think.

From the plumed medieval knight (the Life Guards on their caparisoned steeds in the busy streets of London today) to the jurist in his long white wig without which the ancient dignity of the unwritten constitution cannot be upheld, down through the liveried servant in knee breeches, buckles and shining buttons, the English conserve the past. In the always throbbing heart of London, if an old church is in the way it is not ruthlessly torn down, as it too often would be in America. It is left standing. The street is bent around it. The church with its historic associations is conserved, be it the small Saint Mary's of the Strand or the great Saint Paul's Cathedral. I saw farmers' houses thatched with grass, on the Manor at Piltdown Commons south of London, which were built in the 14th and 16th Centuries. The head farmer on that estate now lives in the same house where for four hundred years his ancestors had lived. In America not one adult in ten thousand lives in the house in which he was born.

The English conserve the past. An old church in the way is not ruthlessly torn down. The street is bent around it.

English conservatism is like the dead but solid heartwood of the elm trees of Thoreau's *Journal*. It is 'the pivot and firm column of support for all their growth.' The heartwood of a tree does not grow; present growth is tied to the dead past. It makes for stability but not for change.

Concerning governmental conservatism an English historian has said: 'It has never been the custom in England to seek the attainment of ideal perfection in legislative and administrative matters, but rather, as Burke advocated, to advance slowly and cautiously by a system of compromises and checks.'

The English unwritten constitution is a splendid illustration of conservatism. The English way is not to fix in writing at any time sets of rules for governmental conduct. It is to maintain conduct in harmony with traditional conduct of the past. General principles are accepted, and applied as a matter of course. In the constitution usually the changes are slow, gradual, noiseless; this is the antithesis of the American method of changing our written Constitution by radical amendments. It has been said that 'for the Englishman there is no God but convention; compromise is his prophet.'

A fifth characteristic of the English is *endurance*. Progress by compromise is slow. The English people often seem slow and heavy. These characteristics make for endurance, if one may travel at his own pace. The Englishman eliminates trifles. By seizing the essentials, he saves time, energy and material. He seldom hurries or fumes. He never gets 'nervous,' and rarely loses his head. He goes coolly; he knows he's right. The Englishman differs in this aspect of coolness from the Celt. He may get somewhat heated about a matter; he may be profane about it, but he does not explode easily. His point of combustion is high. The Celt heats quickly, explodes terrifically at low temperature, cools off quickly, and smiles. When the Englishman does explode, no one thinks of laughing about it.

One reason why English national things endure is because Englishmen are quite content to let those among them govern who know enough to govern. In America we are prone to get excited over a fad problem and a brand new man as its exponent. Senators and Representatives demand support because they favor drys or wets, good roads, reciprocity, women's votes, or pure foods. In England a man 'stands' for a district to represent it. That means he will attempt to keep it in its *status quo*. That is easiest. It is conservative. It is enduring. If he succeeds, he is left alone for years, often for a lifetime. It is a rare man who hurries when no one is after him. The Englishman is no exception.

One of the chief reasons why the Englishman is slow, cool, enduring, why he is so unlike the quick, springy, explosive, often irritable American, is because he goes to his work in the morning as late as he can, and leaves it for home as early as possible. His home is his—it is quiet, (*Continued on page 23*)

A DOCTOR Looks at Doctors

And Sees Them as They Cannot See Themselves

By JOSEPH COLLINS

Reprinted with permission from February issue of *Harpers Magazine*

MANY things may be said, and have been said, against doctors: that their conduct frequently testifies a proprietary interest in their patients; that they tacitly agree with those who accord them superhuman foresight and insight; that they understand constitutions and idiosyncrasies merely because they know the individual or his ancestry; that study and observation of disease give them some mysterious knowledge of man's motives and urges; that there is an arcanum of drugs beyond the layman's comprehension.

IT IS not the purpose of this article to deny or refute these assertions. The charge here made against doctors is that they cannot see the woods for the trees; that they do not see the individual because they are dazzled by the disease; that the treatment patients receive is too frequently based upon what they ought to have, in the light of certain scientific formulas, rather than upon careful, sympathetic study of the peculiar experience, mode of life, and emotional equipment of the individual who is to be restored to health.

Plato said that medicine is an art which considers the constitution of the patient, and has principles of action and reasons in each case. It is strange, considering how long this has been known, that we should still be so insensitive to it.

To show that many of the guild, and the leaders at that, are insensitive, I propose to cite a case I know best, my own.

Doctors are always telling one another about 'interesting' cases. An interesting case has much the same appeal to the doctor that the latest mode in clothes has to a woman. Neither can help talking about it. It is both instructive and diverting. I have been an interesting case so long that doctors have ceased to talk of me. Now that I am no longer interesting to them they begin to interest me.

When I was eighteen I gave as much thought to illness as an eagle does to ethics, and I knew nothing about disease. I was a freshman in a large Middle Western university, endeavoring to live on fifteen dollars a month, eight of which went to an elderly, soft-voiced woman, full of repressions and radiant of religiosity, who let the rooms of her comfortable house for two dollars a week. She was a devout, self-sacrificing Christian; and not a little of the money which she earned so toilsomely went to the support of Baptist missions in the Orient. She was so engrossed with helping God in the Far East that she had little time and less inclination to concern herself with the bodily or spiritual needs of His images in the Near West, particularly her lodgers. So when, after six months in her house, I fell ill of what seemed to be pneumonia, she let me fend for myself. By the time a physician was summoned I was semi-delirious. When I regained consciousness I learned that I was an interesting case. I was too ill to care.

The professor of medicine in the university, an old man of much reputation, much of it undeserved, was summoned when I did not 'resolve'—that is, when the right lung did not seem to find air any longer acceptable. He suggested that my thorax be punctured with a hollow needle. He was sure it was fluid, the outpouring of an inflammation of the pleura which was compressing the lung. I do not recall my attending physician very distinctly, but I fancy he acted on the principle, 'If at first you don't succeed, try, try again.' He never succeeded, though he never seemed to tire of trying.

I have often heard patients, referring to a doctor in whose care they had been, say, 'He did absolutely nothing for me.' I cannot say that about my first physician. He did his best to make me buy all the medicines of a drug shop and he had a belief in the efficacy of iodide of potassium quite beyond any understanding that I have since acquired.

AS HIS energy waxed my interest waned. Fever of septic origin has some compensations. It lulls the victim to a stuporous state in which he feels little interest or responsibility.

After several weeks I must have been somewhat better, for I was able to sit up part of the time, but I had not succeeded in losing either the cough or the fever, and I was deplorably weak. If the doctors knew the nature of my ailment they did not share their knowledge with me. All they told me was that they thought I was strong enough to make the journey to my home in Western Connecticut, and that I must live in the open air. It was clear enough to me later that they believed they were dealing with tuberculosis. This was before the days of X-rays and other diagnostic means now in common use, but just about the time when it was beginning to be taught that all pleurisies not associated with pneumonia are tuberculous.

I recall very little of the journey home. I lay for many weeks spent and inert, but gradually my forces ceased to ebb, Nature smiled upon me and brought me a restoring balm.

I do not know how 'interesting' my case was to our family doctor, a kindly, gentle, wizened, laconic old man who treated disease symptomatically and did not bother much about diagnosis. If a patient had continuous fever it was a question of aconite or veratrum viride; if periodic, then quinine was the drug, as one was dealing with 'a kind of malaria.' In the same way, if the heart was feeble or of irregular rhythm, the decision had to be made whether to give digitalis or strophantus. A small phial was sought in a big, black, worn medicine case which opened like a dictionary, the content was emptied into a glass of water, and the patient took a teaspoonful every few hours. If he got well the medicine got the credit; if he did not the doctor had not been sent for soon enough. These were the good old days which, thank God, we shall never see again!

MY FIRST good fortune was nature's caress; my second, an encounter with a real physician. His repute, both as physician and surgeon, extended throughout the state. He had been a surgeon in the Civil War, and on his return he soon dominated the practice of his adopted city. He was a big man with deep chest, soft voice, caressing eye, and gentle touch. His linen was immaculate, his clothing conformed to fashion and, though he was the busiest doctor in the county, he seemed never to be in a hurry. He concentrated his attention on a patient as a burning glass concentrates the sun's rays. It is more than forty years since I walked into his office yet I recall every incident as if it were yesterday. He radiated kindliness and sympathy, he reflected interest and concern, and he made me feel that my recovery and my future were of vital importance to him. If he made a diagnosis of my disorder he did not tell me. He counseled me to live in the open, to try to regain the weight I had lost, and to coddle my energy, hoping thereby to store up more. I took to the woods with a dog and the immortal remains of Miguel Cervantes as sole companions, not too far from a cow, and near enough to a village where cod-liver oil and whisky were to be had. I devoted myself to reconstruction and contemplation. At the end of six months I had recovered sixty-eight pounds, had lost an incapacitating breathlessness

and a side-splitting cough, and had acquired some knowledge of how nature cures disease.

Then I went back to my beloved doctor, who invited me to become his pupil, and for several months I basked in the shadow of a man who was a more consummate master of the art of medicine than anyone else I have ever met. I have envied the intellect and affects of many men, but those of Robert Hubbard most of all.

I SPENT two winters in New York studying medicine, if studying it can be called, for in reality it was memorizing lecture notes, compends, and textbooks, and retaining sufficient facts and fictions to pass an examination. Scientific medicine had been born and it was creeping at a snail's pace toward East 26th Street in New York. It had not arrived there, however, when I left. During the summers I shadowed my revered master, and if I have any knowledge of the physician's art I owe it to him.

When I graduated in medicine I was poor in purse and health, the deficiency in health being due in large part to inadequate and insufficient food. I had lost weight and was extremely susceptible to that strange malady of many origins called 'a cold.' I had been impressed with the penetrating clinical insight of one of my professors who had great repute as a specialist in diseases of the chest, and I determined to ask him to examine me and counsel me that I might grow strong and stay so.

He was a deep-chested man, too, with a strident voice and a keen eye. His *fortiter in re* was genuine; his *suaviter in modo* artificial. During the eight years I knew him, I heard many flattering things said of him, but I never heard anyone say he was kindly or compassionate. When he died an obituary notice in one of the medical journals said, 'He was an admirable business man.' When one went to consult him, with five dollars, one rang the stoop-door bell; but if one had only a dollar, the basement bell admitted. I went in with the goats.

He heard a brief account of my story, standing, and then proceeded to examine my chest. Despite breathing exercises assiduously practised and carefully planned calisthenics, I had not been able to overcome the thoracic deformity or to get sufficient air into the lower portion of the right lung to make a resonant sound when the chest was percussed. The professor was visibly astonished and clearly interested.

Like the Ancient Mariner, only with drooping mustache instead of long gray beard, he held me with his glittering eye and said, 'Young man, there is only one place where you can live: Arizona. You'd better get out there as quickly as you can. If you go now there's a good chance you'll recover. You see, that old affair in your lung has started up again.'

There had been no inquiry of plans or prospects, no solicitude for ambitions or desires, no interest in the spirit of the man whose engine was signaling for gas and oil. That day I determined never to sentence a person on sight, for life or to death.

A dollar and eighty cents would take me home provided I travel by boat a large part of the way. I would have five cents left toward paying my fare to Arizona, where I had not the smallest intention of going. Then, as I reached home, the great blizzard of 1888 occurred and my fortunes turned.

One of my neighbors, reputed to be rich, had been overtaken by the storm driving home from the station, and that evening, on retiring, he found that the automatism of an important function had forsaken him, and soon he was in great pain. The nearest physician was four miles distant, and the night was perilous. 'Perhaps the young doctor who has recently come home could do something.'

He could, though he had learned nothing in the medical school, and was quite unprepared to practise medicine. His mentor had taught him many things, including how to pass a catheter.

After the snowdrifts had become pools and the crocuses had thrust out their heads I returned to New York with twenty dollars and a determination to stay.

There were few idle hours in the next ten years of learning and teaching, practising and writing, dreaming and planning. Then the machinery began to creak again. Day after day I felt myself thrust between the hammer and the anvil. At each blow the pain in the right side of the abdomen became a little more constant, the apprehension a little keener, the despair a little more prostrating.

THE first colleague I consulted was reputed to have a comprehensive grasp of human pathology. During my student days the opportunity had come to me to row the poppy-boat for a few nights in which one of his wealthy celibates, worn with age and excess, was making the crossing of the Styx, and I was impressed with the gentleness, solicitude, and attentiveness of his physician. On first contact one could scarcely help believing that his speech was not affected, his manner was not artificial, his gestures not studied, his airiness not assumed. But he was the most genuine of men, who had laboriously taught himself the science of diagnosis, and whose failure to acquire the art of it was in a measure compensated for by his honesty and optimism. Later, when confronted with puzzling problems, I rarely appealed to him in vain. He was generous of his time and talent, sympathetic, understanding, and kindly, and a most indefatigable worker.

He listened with interest to my story, from which, being a physician, I deleted the apprehension. He became deeply absorbed by the immobile side of my thorax and at first was inclined to attribute the symptoms to the 'old lesion' in the chest, but finally decided that I had chronic appendicitis. It was not the fashion then to go, knife in hand, after that vestigial remnant when it began to be troublesome, as it is today. 'An operation may be necessary, but the time is not yet.'

As I was quite unfitted to go on with my work, I went to a seaside town and followed closely the movements of a surgeon who was summering there. I adhered strictly to the prescribed dietetic régime and its various annoying accompaniments, but all to no purpose. When I returned home at the end of the summer I was in worse health than when I left. It, therefore, seemed prudent to seek help elsewhere.

ONE of my first important patients had brought me into pleasant, and to me, flattering contact with a physician who had the reputation of having no peer in the field of diagnosis in New York or in the whole country. He had not only trained himself patiently and laboriously in the hospital ward and laboratory, but he was a 'born' diagnostician and something of a wizard as well. He looked the part. But if he had any fellow-feeling for a sufferer he could conceal it better than anyone I have known.

After careful and repeated examination he confided to me that I had tuberculosis of the kidney: 'In view of that pulmonary trouble that you had some years ago, etc.' I think he enjoyed telling me that I was affected with an incurable disease. Fortunately I did not believe him and, more than that, both his reception of me and his interpretation of my disorder had angered me. I felt I had not been treated like a human being.

At that time I was by way of seeing frequently and intimately, as we were working in the same hospital, a young man whose clinical insight and judgment I had grown to admire and respect. He had come to this country a few years before, penniless and nearly friendless. By virtue of a charming personality, innate kindliness, intellectual honesty, and colossal industry, he was forging rapidly to the front. I could do no better than forsake the counsel of the old men and consult the young.

'The thing for you to do,' said the young doctor, 'is to take an anesthetic and be thoroughly and properly investigated. No one can be positive that it is tuberculosis of the kidney without such examination. And it is much more likely to be a growth than a lesion of the kidney.' (*Continued on page 26*)

The True Story of MARY'S LITTLE LAMB

THERE *was* a Mary, and there *was* a lamb. That, at least, is what the old Redstone Schoolhouse of Sterling District No. 2 stands to prove. But the schoolhouse is not in Sterling now. When it became known as the scene of the immortal children's classic it was removed for preservation and now stands in the shadow of deep woods on a side road near Longfellow's Wayside Inn, where its old walls echo to songs and lessons again.

This primitive temple of education has had a varied history. Built about 1798, it continued in use as a school until 1856, when it was sold for thirty-five dollars and fifty cents. Not a humiliatingly low price when it is considered that the quarter-acre lot of land on which it stood was sold for ten dollars. It was a corner lot, too, on the road between Sterling and Clinton. Although known throughout the countryside as 'the old Redstone Schoolhouse,' it was really an ordinary wooden building of the familiar country type, sixteen by thirty feet, and painted red; its name was taken from the fact that it stood on a rising called Redstone Hill. There were little benches for the very young and rude writing desks which accommodated four of the older pupils, and the chimney had a niche to store inkwells to keep them from freezing.

When its educational career ended in 1856, the building saw various uses until eventually it became part of the Baptist church society's garage at Sterling. Here, in 1926, Mr. Henry Ford discovered it, and then began the train of events which brought the 'Redstone' schoolhouse of Sterling to the Wayside Inn of Sudbury, and restored it to its old-time use. It bears two memorial tablets now. On the right of the door, in bronze, is a facsimile of two pages out of *McGuffey's Reader* giving the 'Mary's Lamb' lesson, while on the left of the door another bronze tablet reads:

IN HONOR OF THE CHILDREN'S CLASSIC
"MARY HAD A LITTLE LAMB"
AND OF
MARY ELIZABETH SAWYER—1806-1889—
THE "MARY" OF THE POEM
REBECCA KIMBALL THE TEACHER
JOHN ROULSTONE AUTHOR OF THE
FIRST TWELVE LINES
SARAH JOSEPHA HALE
WHOSE GENIUS COMPLETED THE POEM
IN ITS PRESENT FORM

THIS BUILDING INCORPORATES THE ORIGINAL "REDSTONE" SCHOOL HOUSE, SCENE OF THE POEM, WHICH STOOD ON THE SECOND SCHOOL DISTRICT OF STERLING, MASSACHUSETTS. IT WAS IN USE FRO 1798 TO 1856 AND WAS REMOVED TO TH SPOT FOR ITS PRESERVATION BY MR. AND MRS. HENRY FORD IN 1926

The authorship of 'Mary Had Little Lamb' was once a matter c contention between two parties; namely those who held that Sarah Joseph Hale wrote a purely imaginative poem and those who held that Mary Sawye was the actual heroine and Joh Roulstone the first poet, whose line about the lamb were afterward ex panded. That this contention has bee settled with equal honor to Sara Hale and Mary Sawyer, the presen article is designed to show.

Here, then, is the story of Mar Sawyer. The Sawyers of Ne England came from Lincolnshire England, in 1643, and 'were a unprecedentedly prolific race They probably outnumber an other family race throughout Ne England, unless it be the Wilders; an no one family of them could equal tha of Thomas Sawyer.' So read th chronicles of *The Sawyers in America* They were well named—they were i fact *sawyers*. 'If the Sawyers were no born with saws in their hands, the saw came very readily to their hands . . Every town, village, road and lan throughout New England bears witnes of their skill and industry.' They wer millwrights, wheelwrights, blacksmiths coppersmiths, carpenters, coopers, an they were pioneers in the use of water power. To this day their mills an lumber yards are to be found in th hands of their descendants, and the have made their mark in the academic political and military worlds.

Mary Elizabeth Sawyer.
(Mrs. Columbus Tyler.)

From this race was born, on March 22, 1806, Mary Elizabeth Sawyer. She was of the fourth generation in America and herself the beginning of the fifth generation in her family line. Her father was Thomas, the son of Ezra Sawyer, and her mother was Elizabeth Houghton.

There appears to be no exact data as to Mary's age when the incident of the lamb occurred, but the Boston *Transcript* of February 14, 1878, printed the following:

THE veritable "Mary (who) had a little lamb whose fleece was white as snow" visited the Old South Spinning Bee yesterday afternoon and told the ladies present the story of the lamb. When she was nine years old and was living on a farm, one morning she went out into the barn where she found two little lambs, one of them nearly dead . . .

This reference to the age is of course secondhand; another and perhaps more accurate reference appears presently.

The narrative in its most widely known form was published in 1902 by Frederick A. Stokes Company, and is as follows: (To avoid confusion we should say at this point that Mary Sawyer's marriage name was Tyler.)

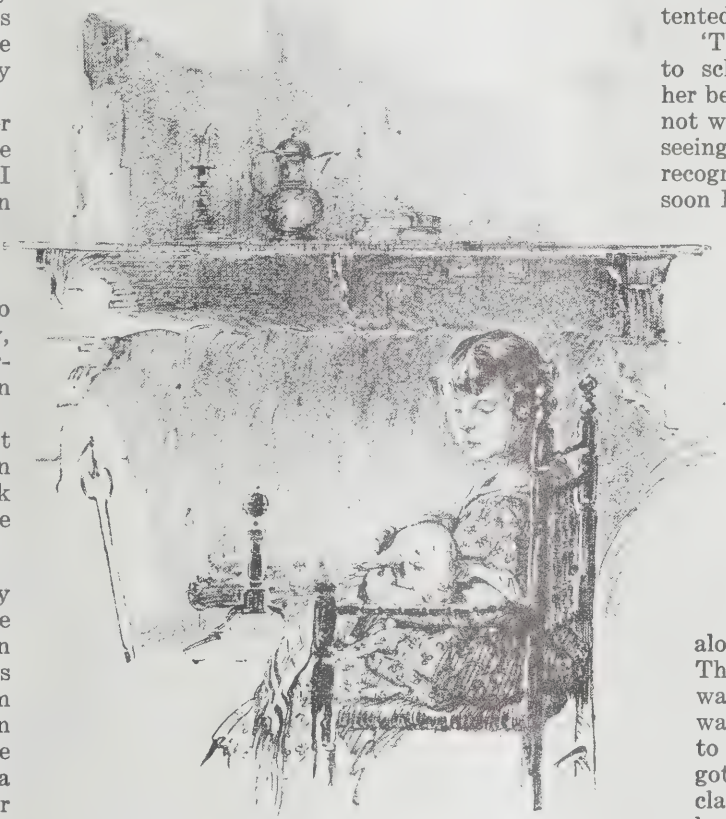
'Well, if I had known,' Mrs. Tyler smilingly said to a visitor at her home a few years ago, 'that the interest I took in my little pet was to have given me so much notoriety, I do not know that I should have carried out the plan I did; but I think I should, for then I was too young to understand much about notoriety, though not too young to take an interest in dumb animals, especially when I saw them suffering.'

At first Mrs. Tyler was somewhat loath to talk for publication; but when informed that it was the little folk for whom the story was to be told, she related the tale as follows:

OF COURSE it will not be necessary for me to tell you about the house where I was born in Sterling; if you have been there, you know all about it. I was always very fond of animals; and from the time I could toddle out to the barn I was with the dumb beasts not a little of my time. I think there was not a horse, cow, sheep, ox, or any other animal upon the place, but knew me. It was rare sport for me to pluck clover tops, and make the horses follow me about the fields for them. By calling to them or to the cows, I could get them to come to me, and I always intended to have something for them when they came.

'One cold, bleak March morning I went out to the barn with father; and after the cows had been fed, we went to the sheep pen, and found two lambs which had been born in the night. One had been forsaken by its mother, and through neglect, cold and lack of food was nearly dead. I saw it had still a little life, and asked to take it into the house; but father said, No, it was almost dead, anyway, and at the best could live but a short time. But I couldn't bear to see the poor little thing suffer, so I teased until I got it into the house. Then I worked upon mother's sympathies. At first the little creature could not swallow, and the catnip tea mother made it could not take for a long time.

'I got the lamb warm by wrapping it in an old garment and holding it in my arms beside the fireplace. All day long I nursed the lamb, and at night it could swallow just a little. Oh, how pleased I was! But even then I wasn't sure it would live; so I sat up all night with it, fearing it wouldn't be warm enough if there was not some one at hand to look out for its comfort. In the morning, much to my girlish delight, it could stand; and from that time it improved rapidly. It soon learned to drink milk; and from the time it could walk about, it would follow me anywhere if I only called it.



I got the lamb warm by wrapping it in an old garment and holding it in my arms beside the fireplace.

'My little pet was a fast grower, as symmetrical a sheep as ever walked, and its fleece was of the finest and whitest. Why, I used to take as much care of my lamb as a mother would of a child. I washed it regularly, kept the burdocks picked out of its hoofs, and combed and trimmed with bright-colored ribbons the wool on its forehead. When that was being done, the lamb would hold down its head, shut its eyes, and stand as quiet as could be.

'From the time it could walk until the season came for the sheep to go to pasture my lamb stayed in the woodshed. It did not take kindly to its own species; and when it was in the field, it preferred being with the cows and horses instead of with other sheep.

'The lamb was a ewe and became the mother of three lambs, a single one and twins, and her devotion to her little family was as strong as could be.

WE ROAMED the fields together and were, in fact, companions and fast friends. I did not have many playmates outside the dumb creatures on the place. There were not many little girls to play with, and I had few dolls; but I used to dress up my lamb in pantalets, and had no end of pleasure in her company. Then I had a little blanket or shawl for her; and usually when that was on, she would lie down at my feet, remaining perfectly quiet and seemingly quite contented.

'The day the lamb went to school, I hadn't seen her before starting off; and not wanting to go without seeing her, I called. She recognized my voice, and soon I heard a faint bleating far down the field. More and more distinctly I heard it, and I knew my pet was coming to greet me. My brother Nate said, "Let's take the lamb to school with us."

'Childlike, I thought that would be a good idea, and quickly consented. The lamb followed along close behind me. There was a high stone wall to climb, and it was rather hard work to get her over. We got her on top, then clambered over to take her down. She seemed to understand what was expected, and waited quietly for us to take her off the wall.

'When the schoolhouse was reached, the teacher had not arrived, and but few of the scholars were there. Then I began to think what I should do with the lamb while school was in session. I took her down to my seat—you know we had old-fashioned, high, boarded-up seats then. Well, I put the lamb under the seat and covered

her with her blanket; and she lay down as quietly as could be. By and by I went forward to recite, leaving the lamb all right; but in a moment there was a clatter, clatter, clatter on the floor, and I knew it was the pattering of the hoofs of my lamb.

'Oh, how mortified I felt! The teacher was Miss Polly Kimball, who was afterward married to a Mr. Loring, and became the mother of Loring, the circulating-library man of Boston. She laughed outright, and of course all the children giggled. It was rare sport for them, but I could see nothing amusing in the situation. I was too ashamed to laugh, or even smile, at the unlooked-for appearance of my pet. I took her outdoors, and shut her in a shed until I was ready to go home at noon. Usually I did not go home till evening, as we carried our lunch with us; but I went home at noon that day.

'It followed her to school one day.'

'Visiting the school that morning was a young man by the name of John Roulstone, a nephew of the Reverend Lemuel Capen, who was then settled in Sterling. It was the custom then for students to prepare for college with ministers, and for this purpose Mr. Roulstone was studying with his uncle. The young man was very much pleased with the incident of the lamb; and the next day he rode across the fields on horseback to the little old schoolhouse, and handed me a slip of paper which had written upon it the three original stanzas of the poem. Since then three additional stanzas have been added to it. Here is the little poem as I received it:

Mary had a little lamb;
Its fleece was white as snow;
And everywhere that Mary went,
The lamb was sure to go.

It followed her to school one day,
Which was against the rule;
It made the children laugh and play
To see a lamb at school.

And so the teacher turned it out;
But still it lingered near,
And waited patiently about
Till Mary did appear.

'From the fleece sheared from my lamb, mother knit two pairs of very nice stockings, which for years I kept in memory of my pet. But when the ladies were raising money for the preservation of the Old South Church in Boston, I was asked to contribute one pair of these stockings for the benefit of the fund. This I did. The stockings were raveled out, pieces of the yarn being fastened to cards bearing my autograph, and these cards were sold, the whole realizing, I am told, about one hundred dollars. After the first pair were thus sold, the ladies wanted more yarn; and they were so anxious to have the other pair raveled out that I gave them also. Now all I have left in remembrance of my little pet of years long ago are two cards upon which are pasted scraps of the yarn from which the stockings were knit.

'I have not told you about the death of my little playmate. It occurred on a Thanksgiving morning. We were all out in the barn, where the lamb had followed me. It ran right in front of the cows fastened to the stanchions, built along the feed box. One of the creatures gave its head a toss then lowered its horns and gored my lamb, which gave an agonizing bleat and came toward me with the blood streaming from its side. I took it in my arms, placed its head in my lap, and there it bled to death. During its dying moments it would turn its little head and look up into my face in a most appealing manner, as if it would ask if there was not something that I could do for it. It was a sorrowful moment for me when the companion of many romps, my playfellow of many a long summer's day, gave up its life; and its place could not be filled in my childish heart.'

The teacher, Miss Polly Kimball.

The little book goes on to say that Mrs. Tyler's later years were cheered by the companionship and loving care of her niece, Annie E. Sawyer, a Somerville school-teacher, who did all in her power to make her aged aunt's declining days peaceful and happy. Mrs. Tyler died December 11, 1889, and is buried in the famous Mount Auburn Cemetery in Boston.

The narrative is then confirmed by this affidavit:

'Commonwealth of Massachusetts, } ss
County of Worcester, }

'Henry S. Sawyer, of Sterling, Worcester County, Mass., being duly sworn, deposes and says: That he is a relative of Mary E. Tyler, née Sawyer, deceased; that he lives in the same house in which she was born and married, and in which she lived at the time the incidents referred to in the poem of "Mary Had a Little Lamb" occurred. That he attended school at the same schoolhouse where she attended school at the time referred to in the poem, and that he knows the facts as published in this book to be true.

HENRY S. SAWYER

'Sworn and subscribed before me, a Notary Public in and for the Commonwealth of Massachusetts, this sixth day of May, A. D., one thousand nine hundred and one.

William A. Wilcox
Notary Public'

This is the artless and circumstantial story, published everywhere, and told by Mary Sawyer personally to many friends and at occasional small gatherings. Her relation to the poem seems to have been a matter of modesty with her for a long time, and its widest burst of publicity seems to have occurred about the time that sewing bees and bazaars and fairs were being held by patriotic Boston to save the Old South Church from being sold. Mrs. Ann Eliza (Sawyer) Warren, a niece of Mary's, tells in the *National Magazine* for June, 1897, how this came about:

Being in Boston at the time of the Old South Fair, some of the leaders asked her,

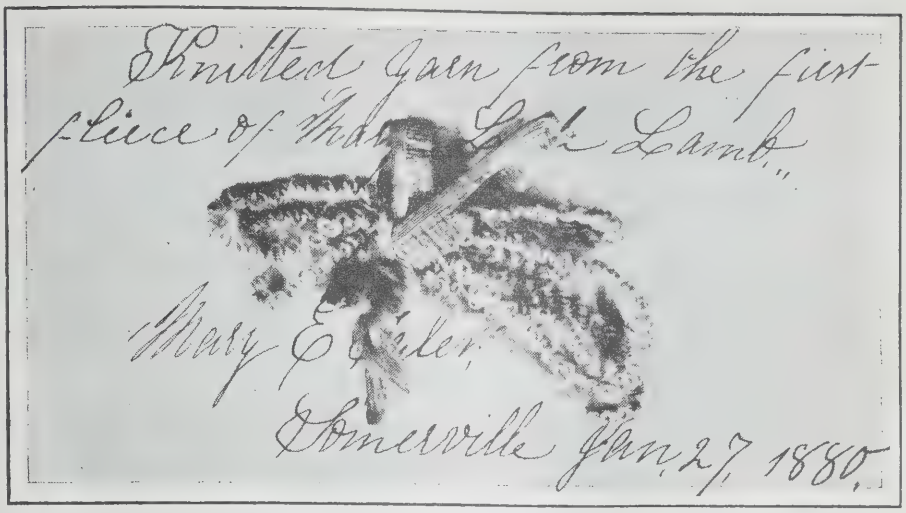
'What shall we do to amuse and interest the children who may come here?' At their earnest request she consented to go every day at a certain hour, and in a side room of the building, tell the story of the lamb to the children and give to each of them a little silken knot of yarn from the fleece of the lamb. By this means she added to the funds of the fair many hundreds of dollars, and indeed this work did not stop with the close of the fair, but for months every now and then, letters would come from far and near, asking for a piece of the yarn.

THERE is no doubt of the distance to which these fleecy souvenirs found their way, if the widely separated points from which they have been offered to the Ford collection may be used as a criterion.

So that if one were to be cross-examined as to the foundations for belief in the story, the first answer would be, *Mary Sawyer said so.* She told a story that is natural and unforced and that has preserved its consistency from the time it was first heard until now. It is a plain tale and every feature of it is a common possibility. Mary was not the only girl who had a lamb for a pet, and Mary's lamb was not the only one that was saved from untimely death by kindly nursing. Yet Mary told the story within a comparatively short distance of the scene of the poem, and at the very scene itself, as we shall see, which would hardly be the case had there been any doubt about it. The town of Sterling and all the neighbors thereof could have risen against her in denial, if the story were unknown or merely a myth. Yet there is no record of that having occurred. Mrs. Tyler lived a most highly respected lady and died at the age of eighty-three in December, 1889. No one who knew her character could doubt her truthfulness, no one who knew her mind could doubt her alertness of memory, and both these qualities bear weight when considering the story of Mary and the lamb.

How uncompromising is her testimony can be understood only by a study of the great number of times she repeated it. On every little card that bore a snip of yarn, she wrote with her own hand, 'Knitted yarn from the first fleece of Mary's Little Lamb,' followed by her signature, 'Mary E. Sawyer,' and the date. Moreover, she wrote in her own hand the poem as she says it was given to her by John Roulstone, and she always wrote it in just that way, never more than twelve lines. Some facsimile presentations of these autographs accompany this article. All these together say, 'This is the fleece of the lamb; this is the poem; and I am Mary.' There can be no doubt about the nature of the unequivocal claim she made for the lamb and John Roulstone's poem. And Boston apparently accepted it.

The story, however, was current long before the Old South publicity, if certain testimony is to be credited. Naturally, if such an event had occurred as Mary's lamb inspiring a poem by being put out of school, the matter could not have been kept secret. It was at least told through the extensive family.



Knitted yarn from the first fleece of Mary's Little Lamb.

Mrs. Mary (Sawyer) Powell, New York City, a niece of Mary Sawyer and a daughter of Nat (Nat was the little brother that helped Mary's lamb over the stone wall on its way to school), writes in 1910:

'The story that father told me is the same as is printed in book form by Fred A. Stokes Company, New York.'

This statement includes Mary's brother as one of the original narrators of the incident. Then there are such references as these which are found in the letters of Eliza Ann (Sawyer) Warren, of West Newbury, Massachusetts.

'My youngest brother who died last October (1910) says: "I have a letter written to me by Uncle Nathaniel not long before he died. In it he mentions Reverend Capen and the verses about Aunt Mary's lamb . . ."

'Brother Frank writes, "I only know of it by Aunt Mary, Uncle Nat and Grandma Sawyer telling me of it, and Uncle Nat was the one who showed me where the lamb was found. Uncle Nat was always chaffing Aunt Mary about it . . . "

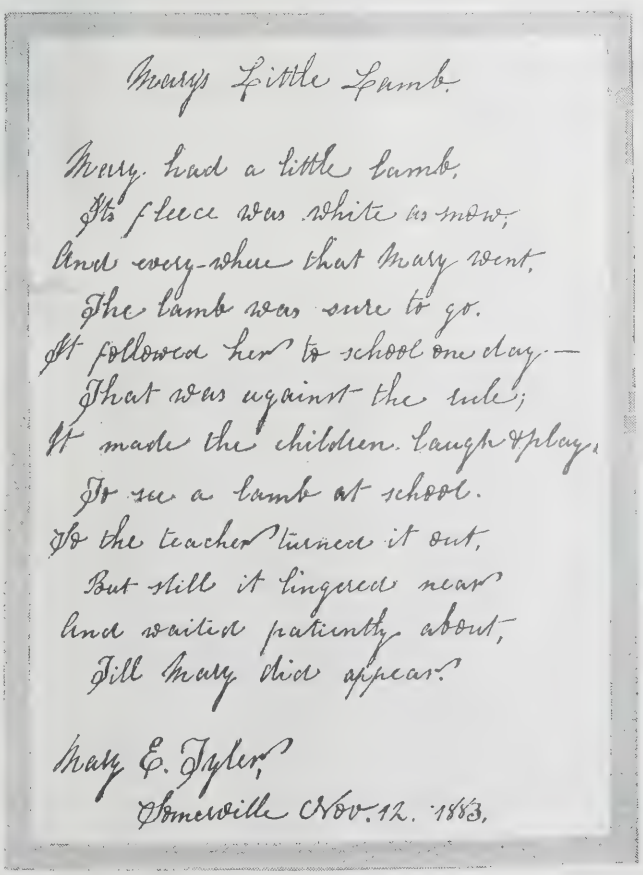
'Aunt Mary used to say that Mrs. Hale never claimed the first three verses, but that she added to them; it was her relatives that claimed the whole . . .

'I do not know what year the incident happened. Aunt Mary was born in 1806. I always supposed her a girl of eight or ten years when it happened . . .

'For myself I have known the fact of Aunt Mary and her lamb from childhood . . . I have an impression when we had a family gathering at bro Edwards' in 1863 or 4, Uncle Nat and Aunt Mary had some fun over it.'

Then there is the niece who lived with Mary Tyler throughout her closing years in her Somerville home and who has this to say in June, 1926:

'In regard to Mr. Roulstone being the author of the little poem of Mary and the Lamb, my aunt always declared that all she knew about it was the fact that he drove, or rather rode, to the school on horseback the morning after the incident and handed her a slip of paper on which were written the first twelve lines . . . The teacher's name was Polly Kimball. It was just a simple childish story that pleased children, for my aunt always told them she fed it the first few days of its life on catnip tea. She was greatly annoyed by the prominence given both it and herself when it was first printed at the time of the Old South Fair and regretted exceedingly that she had been persuaded to tell it in public.'



Mary's Little Lamb.

Mary had a little lamb,
Its fleece was white as snow,
And everywhere that Mary went,
The lamb was sure to go.
It followed her to school one day,—
That was against the rule;
It made the children laugh & play,
To see a lamb at school.
So the teacher turned it out,
But still it lingered near
And waited patiently about,
Till Mary did appear.

Mary E. Tyler
Somerville Nov. 12. 1883.

The poem in Mary's own hand.

(This is the first of two articles on this subject. The next will will appear in an early issue.)

LOCAL record dealers everywhere can supply these authentic records. They play most of the music broadcast by the Henry Ford Dance Orchestra from WEAF and connected stations. ¶ Public schools, colleges, clubs and churches throughout the United States have taken up these dances since their recent revival. The public approval of Old American Dances has become so general that today more people are dancing them than during their ancient vogue. ¶ The beauty of personal and group movements and the charming restraint of manner of these Old American Dances recalls the best of the social life of the younger days of the republic when our national character was being developed. ¶ American families can do nothing better in a social way than to enable their children to learn these fine old dances. They are as satisfying as Colonial furniture and silverware and Stuart and Peale portraits. They teach dignified deportment and polite self-possession to the young.

'Good Morning'

A manual of the 'calls,' descriptions and other essential information about the conduct of Old American Dances has been prepared under the direction of Mr. and Mrs. Henry Ford **75c**

Piano Music also suitable for the violin, for 14 Old American Dances, **$1.00** for entire set.

Orchestrations of 12 parts, including saxophone, for 20 dances; **25c** for each orchestration.

These publications can be obtained either through your local music, book, stationery or other dealers or direct from Dearborn, postpaid.
We do not handle records; see your local dealers.

Gibson Girls, Gibson Men

(*Continued from page 5*)

Woodrow Wilson at the beginning of the 20th Century.

ırg's *The Prairie Years*—a most noble ›ok.

Other titles that I would like to name ›m Mark Sullivan's book are: *Roosevelt ecomes President*, and *The Automobile merges*. Some pictures I would like to name e those of the early Boer leaders, many *adies' Home Journal* cuts, showing the olution of fashion, and Gibson Man ctures of Calvin Coolidge, Herbert Hoover d William Gibbs McAdoo in 1900. There a cut lifted from *The Covered Wagon* film which our good friend, Mark Sullivan, has d up the whole story of the disappearance free Western land.

As a matter of fact, every picture in e book is beautifully selected and ll worth while. But the book should illustrated by one thousand Gibson rls, some just twenty-four years old in 26.

This seems to be our instant for a more rsonal review of the first quarter of the ntury. Here, for instance, in Sullivan's ok, is a picture of Richard Mansfield, who roduced Rostand's *Cyrano de Bergerac* the American stage in 1898. At that ry moment my future brother-in-law and had persuaded the local Delphic committee of Hiram College to put on this, our vorite play, for Commencement Week. e, and everyone else, coached the principals for six months, and had every word of le translation by heart. There were some ry beautiful girls in this coeducational hool, who took the part of Roxane and her bevy of beauties more beautifully than it has ever been done since. Right now I can recite that balcony scene, and so can my brother-in-law.

Last spring for one week I attended Walter Hampden's *Cyrano* at the Hampden Theater on Broadway. I can say in all honesty that it is better acting than Mansfield's a quarter of a century ago. The new translation by Brian Hooker seems infinitely better; and Clayton Hamilton's introduction to the new edition is a joy to my soul. It brought back the ancient days at Hiram when my future brother-in-law and I tried to teach a coeducational, fresh-water college the marvels of this French drama, without ourselves being able to read French.

The Clayton Hamilton preface, calling back that time in a far more serious way than these remarks, justifies the great shout with which William Allen White and the rest continue to welcome Mark Sullivan's book. This Cyrano aspect is another sign that our old leaders in many fields have passed with amazing rapidity, have been brilliantly supplanted almost in a night, and that the instant of retrospection is upon us.

The people of this instant are curiously the people of twenty-five years ago. There is an amusing sentence in the theatrical chapter of Mark Sullivan's book: 'James O'Neill, later to be revived in a vicarious fame as the father of Eugene O'Neill, was playing in the nineties *The Count of Monte Cristo*.'

There is a bit of verse in which I try to indicate, with all due respect to Eugene O'Neill, that in all things we are the sons of our World's Fair fathers and our Gibson Girl mothers!

I

I will not spat them plays upon the wrist, bo;
Eugene, I seen your Pa in *Monte Cristo*.
Desire Under the Elms may still keep tryst, bo,
For I seen your Pa make love in Monte Cristo.

II

Our actor's dynasties we see persist, bo.
Beyond the Horizon lingers Monte Cristo;
So we forgives your high art mud and mist, bo,
For the sake of good old Ham-Sides Monte Cristo.
Why do we like your shredded wheat and grist, bo?
We thinks a lot of the son of Monte Cristo.
Where did you learn to write with foot and fist, bo?
Watching them fights in the Count of Monte Cristo.
Them *Hairy Apes* by me will not be hissed, bo,
I seen your Pa a whale in Monte Cristo.
Emperor Jones with kings can still enlist, bo.
Your Pa could scare 'em stiff in Monte Cristo.
Eugene, your *Great God Brown* can still exist, bo.
I seen old James a god in Monte Cristo.
Your sloshing seas and sailors mermaid-kissed, bo,
Came from that *World Is Mine* scene, Monte Cristo;
And I have figured out a list of things, bo,
That *Anna Christie* learned from Monte Cristo.
Though all nine muses splash upon your list, bo,
They learned to dive them dim days long ago
Trying in vain to drown proud Monte Cristo.

I know of no better way to take this instant than to read Mark Sullivan's *The Turn of the Century*, to read the new translation of *Cyrano*, with the same old eternal moral: 'Step softly and carry a Big Stick'; to look at a complete collection of the old Gibson Girl portfolios, and to note how that dazzling type is taking possession of our new universe.

The type may be camouflaged under various aspects, but the new Gibson Girl differs little from her sister back in the nineties.

The Inside Story of Sinclair Lewis

(*Continued from page 1*)

During the visit Lewis was looking for a preacher to assist him in writing the new book. He invited the writer but it could not be arranged. He invited one or two others to take several months off and help him with the book. Finally he persuaded Dr. L. M. Birkhead, a Unitarian, to help him. Mr. Birkhead began his ministry as a Methodist preacher but was unhappy in the Methodist church and withdrew. It is interesting to know this in the light of the present preacher book.

THERE was what Mr. Lewis called the 'Sinclair Lewis Sunday School Class' while he was in Kansas City.

This group of so-called Liberal preachers had been meeting for years and it assembled at his request to talk things over. Mr. Lewis called himself the teacher of this Sunday school class.

They were Universalist, Unitarian, Methodist, Presbyterian, Baptist, Christian, and Lutheran—the ministers who made up this class. There were also visiting newspaper editors, business men and authors who dropped in from time to time.

Lewis was very frank in his approach; he was no diplomat. He was a bludgeoning belligerent. Usually he opened the so-called Sunday school class with a bombardment of the church. 'What the hell right has the church to exist anyhow? What accounting can you loafers give to society? What right have you to draw salaries? What do you believe in anyhow? What have you to give to the world?'

After these opening remarks, the preachers had their comeback. There were many answers given, which thoughtful visitors from time to time, like William Allen White and others, agreed were real answers, but as far as we learned none of them seemed good answers to Mr. Lewis. He was not out to get answers. He was to obtain material to buttress an idea he had of preachers and the church and he would not admit any other type of evidence.

The group that met in this class were aware all the time of just what Mr. Lewis wanted and what he was going to do. He was honest with them and they were fair with him. Everyone had a stimulating time. Lewis has a quick mind even if it is not a profound mind—and he awakened that group of preachers as they had never been awakened before.

A PREACHER left one of the first of these meetings and exposed the dreadful fact that though it was a group of preachers they did not even say grace before they ate.

'That bird is a crook and I'll prove it to you before I leave this town,' declared Lewis.

He did. He hates hypocrisy, and what he calls 'bunk' in any profession.

He was not after the beautiful things about the church or the ministry. He wanted to paint his idea of a minister who was a crook and a sexual pervert, and he has done so in *Elmer Gantry*.

The fact that no such minister exists in the church, or if he ever gets in, does not continue to stay in the church, did not make any difference to Lewis. He wanted to depict a bad minister and—not actually having found one—he drew one from his own mind.

William Allen White commented to me: 'He has painted an unrelieved villain. That is not good art. Besides no preacher of that type could live in the church. He would never have survived the small town, much less have gone on to success. It is bad art. Lewis' psychology is wrong and his characterization is untrue.'

Mr. Lewis has not done what we expected him to do. We knew he would be scathing. We knew he would be biting. We knew he would paint a caricature. We looked for those things. But we expected more than this. We looked to Sinclair Lewis to understand his theme and he has disappointed.

We could have stood anything if the new book had been big enough to have helped the church; even to the puncturing of some of our bubbles and the exposing of our real weaknesses.

After the two months in Kansas City, Lewis, with a Kansas City preacher, went into retirement in Minnesota where he wrote the first draft of the new novel. Then he went to Washington.

Sinclair Lewis is a sentimental fellow after all and this move to Washington was made that he might put the final touches to *Elmer Gantry* where he had finished *Main Street*.

Dr. L. M. Birkhead was with him all during the writing of the new book. He was there to give technical advice, and to act as a detail man. The fact that he is a Unitarian and a man who left the Methodist church gave him an opportunity to know well the two great denominations.

MR. LEWIS for six months subscribed for many church papers and read them diligently. He had his work room filled with Bible dictionaries, theological works, Methodist disciplines, hymn books of every type. I have often taken stock of his library during the incubation of the new novel and found him with a preacher's library larger than many a preacher has after ten years in the ministry.

He worked carefully and his efforts to do a big thing were commendable; but what he failed to do was to get into the heart of any single ministry, of any single church, to see the inside story.

William Allen White remarked to me, 'Seventy-two seductions in one book are too many.'

Sinclair Lewis is a great writer. He rose to great heights in *Babbitt* and *Arrowsmith*, but he has failed in *Elmer Gantry*. The book is neither interesting nor true. It lacks the touch of reality. It is hopeless. It will not do the great thing that we preachers who opened our homes, our churches, and our hearts to him expected it would do. We thought it would be a big book and it has turned out to be a futile book.

One of the best men of letters I know, a literary critic, an editor and a man who has been one of the greatest boosters and admirers of Lewis, said to me, after he had read the proof sheets of this work: 'Sinclair Lewis challenged God to strike him dead in Kansas City. God did, but Lewis did not know it. When the people read his new book they will find it out and so will Lewis.'

Mr. Lewis has actually been at the business of writing this book since about May the first, 1926. The plans were made and the book outlined in Kansas City in May and early June. The first draft was written in the summer, during July and August, 1926, in camp up in Minnesota not far from Sauk Center, his home town which he immortalized as 'Gopher Prairie.' He has taken less time on this book than on his other books and it bears the marks of haste.

Every preacher who knows Mr. Lewis likes him personally. He has won a place in our hearts. We played the game with him. We trusted him as a friend. He has not betrayed that trust as a friend but he has as an artist. We showed him good men and true. We showed him Dr. Burris Jenkins, one of America's great ministers, who has preached in this community for twenty years: true, tried and wholesome. We showed him the inside and the outside of our churches and homes: clean, pure, hospitable and friendly. We took him with us to call on the sick and to bury the dead. We had him with us at family prayers, and prayer meetings. We had him with us when we kneeled to pray with dying men and women. He saw all sides of the minister's life. But he forgot the better side.

What Is a Dollar Worth?

FROM Truth to Probability' is an article by George Boas in the March number of *Harpers Magazine*. Its theme is the difference between statistical and Aristotelian logic. For example:

Suppose the question were raised, 'How much is the dollar worth?' Aristotelian logic would say, 'One hundred cents.' All dollars are the same to Aristotelian logic. There is a quality, 'dollarity,' incorporate in each dollar which makes them all dollars. If a coin hasn't that quality it isn't a dollar.

But when a man asks, 'How much is the dollar worth?' he doesn't mean 'How many cents does it contain?' but, 'How much will it buy compared to what it used to buy?' He is no longer thinking of the dollar as a member of a group of identical items, like a stack of blue poker chips, but as something fluctuating and unstable. There is no longer a question of *the* dollar, but of *a* dollar; or, if you prefer, of the dollar of 1914, the dollar of 1915, the dollar of 1916, and so on. And the dollar of 1914 happens to be worth almost three times as much as the dollar of 1925.

Which dollar is the real dollar, the Aristotelian or the statistical? The former has absolute qualities, the latter relative. The former makes for clear simple additions which a child can perform, the latter for dark and complicated calculations which are secrets to all but the economist. If the Aristotelian dollar is real, then a man who had $1,000 in 1925 was as rich as a man who had $1,000 in 1914; if the statistical dollar is real, the man who bought a Liberty bond in 1917 for $100 and sold it in 1925 for $102 lost money.

People of the British Isles

(*Continued from page 13*)

lain, comfortable. He els at home in it. He at home. This is in ntrast to the Ameri- n man's home which his wife's and daugh- r's. And in further ntrast, when the nglishman gets me, he is likely to d his wife there. he Englishman has isure to spend in his me or for sport in e open air; he thus eps young and cool. he Englishman plays ore, eats more, sleeps ore than we do. He rns less, spends less, lks less, and enthuses ss. In the wear and ar of life he often ems to have greater durance. The en- rance of Englishmen d the nation is part their conservatism, rt of their utilitari- ism, part of their lf-restraint, and part their independence. One may not un- uthfully say to be English is to endure.

King John signed the Magna Charta in 1215. In the English constitution usually changes are slow, gradual, noiseless.

The Englishman does not easily cast his in. He is among the last of our immigrants become an American. The Irish immigrant is said to become an American as on as he catches sight of the Goddess of liberty from his ship at sea. 'Once an nglishman, always an Englishman.' Again, Wherever the Englishman is, he is at home.' ipling tells of finding a lone Englishman in e back lands of India two weeks from nother white man, and all alone with his itive house boys, who regularly put on rmal dress for dinner at his solitary plate his solitary table.

A sixth characteristic of the English is *lf-satisfaction* and pride of race, developing mplacency and aloofness. The Englishman confident there is no better breed of men. e rests secure in his belief in the superior- y of the English race. Through all the aseless struggles among the divers peoples England the survivors have emerged ronger, more complacent and fitter than eir ancestors. No wonder the Englishman s the air of a man well satisfied with him- lf. He is so old, so well known and re- ected, that he does quite as he pleases herever he goes.

It often appears that the Englishman its his worst foot forward—and, further, does not seem to care. This is in striking ntrast to the social Latin peoples who th their polite and suave manners are nt on making a good impression at any cost.

English complacency has been noted by l critical students of the race. Collier ys: 'One need not, however, refrain from iticism on the score of the sensitiveness the patient. The British public is as im- rvious to criticism as an elephant's hide stabbing by sticks of boiled macaroni.'

England's self-satisfaction shows no- here better than in her national poetry. Her poetry, where national, is the song of pride—pride of race.

Yet was I born where men are proud to be,
Not without cause;

said Bryon. It is full of pride of victory by arms, and joy in that victory.

> For this is England's greatest son,
> He that gain'd a hundred fights,
> Nor ever lost an English gun,

says Tennyson, speaking of Wellington. It boasts of present life, deep-breathing and full-veined, unwearied and unconquered. No poet has sung more powerfully than Kipling of the sea and of conquests on the sea.

In church and abbey, in street and square, London is magnificent with monuments of the conquering heroes of England, whose conquests are the themes of her greatest poets.

It will be seen that the English have the habit of success. They have failed at times in various parts of the world, but in England, at the seat of the heart and brain of the race, the unbroken habit of success has swept forward for more than eight and one-half centuries. The Englishman at home can scarcely conceive of English failure, since the past life of the English nation has been so long, its isolation so protected, its muscle, bone and brain so excellent, its characteristics so the warp and woof and familiar fabric of success.

So it is that England stands today in her accustomed place in the Old World, and the nations and peoples bewildered by overnight changes in governments and customs may turn toward one familiar quarter where radical changes are unknown and where even normal changes never come with too great rapidity.

Japan Looks to America to Prevent Wars

(*Continued from page 7*)

no mountain or hill that was not either reforested or in the process of scientific treatment. Japan found Korea in a denuded condition with erosion far advanced and she has undertaken the stupendous task of controlling this erosion and revegetating the denuded slopes.

THE writer particularly interrogated a large number of prominent delegates in many fields of research, and all were unanimous that Japanese scientists are leading all other countries in seismology (the study of earthquakes); in the improvement and practice of sericulture (the silkworm industry); in the scientific control of fisheries and in reforestation. Our delegates also agreed that the work of the Japanese scientists in biology, medicine, chemistry and other branches of research is well abreast of that being done in other countries.

Japan, with a population half that of the United States, has only about one-twentieth as much agricultural land. Thus necessity will force her to work out a model scientific utilization of plant, soil and water which may be a real contribution to other countries. Japan is so highly organized and centralized that she can carry out new projects which would be almost impossible of accomplishment in other countries except over a long period of time.

The phenomenal development of Western science and education in Japan is more amazing when one realizes that it was only about seventy years ago that Japan was really opened to Western influences and that the studies and scientific works mentioned previously are the result of the past forty or fifty years. Yet Japanese civilization is not of recent growth. After seeing the art and culture of Japan, we appreciate that growth has been made from firm roots running deep into the past with its fine culture, its art and its love of the beautiful.

The first stimulus to study Western learning came through the medical men. For centuries Japan had received her ideas from the Chinese physicians. Some traders at Nagasaki left there a Dutch *Human Anatomical Work* by Kulm. Japanese doctors secured possession of this book and, although unable to read, they pored over the charts and pictures. They found the pictures of the human heart and inner organs to be very different from their charts of Chinese sources.

An attempt was made to reconcile this difference by saying, 'Of course these Western barbarians' insides must be very different from ours, because their exteriors are so different. Their eyes and skins are so opposite in color. They have to wear shoes with heels because they have no heels of their own and sit in chairs because their knees will not bend. Since their exteriors are so different, their insides must be equally so.' This conclusion was not accepted by two physicians who secretly secured a criminal corpse and investigated. To their delight, they found that the hearts and internal organs of the white and yellow men were alike. From this discovery first came the impetus to study and obtain Western learning.

Japan may be said to have taken on Western civilization, but not to the extent of destroying her native charm—the bright kimonos, the unique hairdress, the clatter of wooden sandals, the well-kept, irregular yet fenceless fields resembling a huge checkerboard or patchwork quilt, the quaint villages and artistic thatched roofs, the gay shops and the clean polished floors, the adorable children, sometimes carrying a tiny kimonoed baby on their backs, and best of all the genial, smiling faces of the Japanese people of all classes.

WESTERN science has covered the countrysides with electric poles carrying light to nearly every city and hamlet in Japan, yet the first hydroelectric plant was not installed until thirty-five years ago.

The Japan yearbook states that Japan has water power sufficient to supply an average of twelve million horsepower annually. She has yet vast reserves of electric power for future development. Although in possession of sufficient wood supply, the cooking and heating is often done by electricity. Eight thousand miles of railways, which are kept in excellent condition and run exactly to schedule, connect all parts of the islands. Every small village has its light and roomy school buildings. Wherever we went, even to more remote regions, the school chil looked healthy and energetic. This co tion is the direct result of the tireless systematic medical supervision of the few years. Streets have been widened splendid country roads constructed w one can ride in luxury and meet cars o the various makes from abroad.

The great industrial cities, such Osaka, have incorporated the most mo ideas in social settlement work and provements for laborers. This was brought about by public opinion, a America, but originated from the emplo and city officials who sent representa men to the industrial centers of o countries to obtain the best plans for proving the social conditions of the pe

JAPAN is modern yet Oriental. The s building yards, the modern docks, the way stations, the latest methods of mo building construction everywhere in dence, the street cars and auto-bu make one feel a happy mingling of East West. Japan is now the recognized le in the Orient and has the important mis of bringing the civilizations of the and West into harmony.

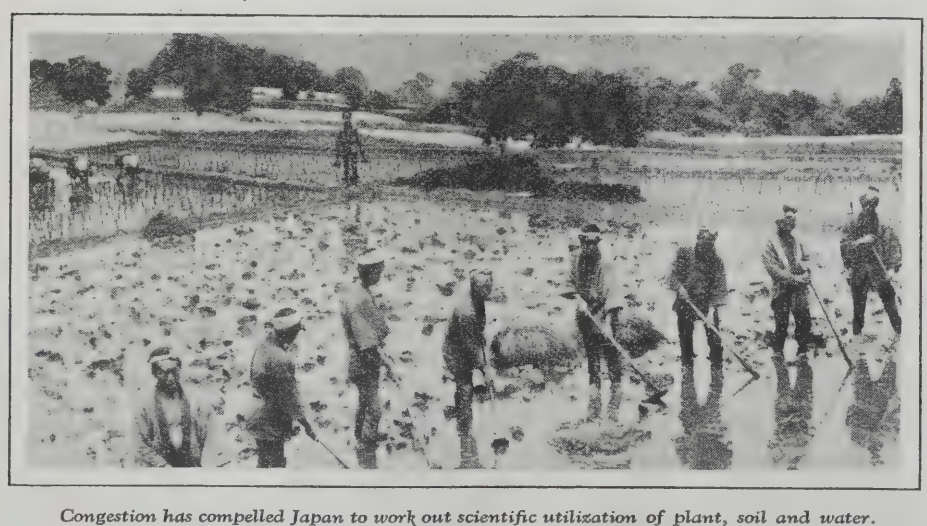
One wonders what has been the stim or impetus back of this phenomenal p ress. Certainly it can be said that Japanese have a most commendable sonal pride in their mother country ar spirit of patriotism worth emulating. T too, they are a most versatile people. W convinced that a new idea is better, do not tenaciously hold to the old a their Chinese brethren. The Japanese not long in recognizing that their militar ambitions were incompatible with the ri spirit of peace and brotherhood. Pol were reversed and the new governo Korea is sympathetic and well liked by Koreans.

Japan's attitude toward China has been reversed and she is now going n than halfway to secure friendly comme relations and the good will of the Chi people. There is a growing moral sciousness being aroused among the J nese which bids fair to do away in time the licensed prostitution, which is the outstanding blot on the nation. If Ja can take the moral leadership in the Or as well as the scientific leadership, she indeed perform a great mission.

The sentiment everywhere in Ja seems to be the hope that there will b more wars. The tremendous reconstruc work all over the country, as well as successful grappling with the greatest si calamity which ever befell any nation w the two great cities of Tokio and Yokoh were destroyed by earthquake, is suffic to excite the admiration of the world.

On several occasions the writer as why we should be the recipients of s overwhelming friendliness from the cour people, and received the reply that Japanese thought we were on a peace c mission to prevent wars in the Pa basin and that freedom from the taxa of wars is what they most want.

The heart of Japan was deeply grie



Congestion has compelled Japan to work out scientific utilization of plant, soil and water.

by the anti-Japanese legislation in America. Not so much that Japanese laborers should be excluded, but that it should have been done in the manner it was—without discussion or explanation. Instead of retaliating, Japan recently passed a law giving special privilege and allowing foreigners to buy and hold land in Japan. This was a privilege which previously had not been allowed.

The congress bespoke a new spirit of international friendship and coöperation: 'To initiate and promote coöperation in the study of scientific problems relating to the Pacific region, more particularly those affecting the prosperity and well-being of Pacific peoples, and to promote a feeling of brotherhood and strengthen the bonds of peace among Pacific peoples.'

Hyphenated Report on Paris

A NEW York evening paper had the bright idea of sending a reporter to Paris to give an account of economic conditions. For this task the selection fell upon a somewhat doubtfully distinguished hyphenated German-American. This delicate type of attention from a New York journal naturally touches the French. If only the enterprising journal could have obtained a German U-boat captain to observe the Parisians and to report his German or German-American observations! That exquisitely good taste conduces to promote international friendship.

This German-American in Paris was astounded at the cheapness of pretty nearly everything. Evidently the journal pays its reporters well, for this journalist is accustomed to buying his suits at one hundred and twenty-five dollars in America. Alack, most journalists and scribes in the United States, certainly those not hyphenated, must content themselves with suits at thirty or forty dollars. This New York (?) journalist was amazed to buy a tie at twenty francs 'which in New York would cost three dollars.'

This naïve reporter found it difficult to pay more than a dollar for his dinner in Paris. Apparently his knowledge of Paris suffers from decided limitations even as does his knowledge of New York. There are a hundred restaurants in Paris, almost wholly devoted to the foreign trade, where a dollar will *not* buy a meal—as thousands of Americans will testify.

In point of fact the necessities of life, like butter and eggs and meat, cost approximately the same in Paris as in America. Clothes are cheaper but about the same as in London and elsewhere on the Continent. Rents are cheaper particularly when you get a cheap apartment, without central heat and with a lack of the decencies. Taxis and drinks are cheaper and so is human labor, but those things do not play a great rôle in the expense of the tourist.

New Yorkers who come to Paris expecting to enjoy at most modest expense a 'fool's paradise,' as Paris is affectionately termed by the hyphenated journalist, are due for a real disappointment, as they will find that while the franc is only three or four cents, yet if it is said often enough, the total is sufficiently large even in dollars.

Every Person Has at Least One Book in Him

(*Continued from page 8*)

The plan is workable in more literary ways: if you want a good book, write it. Write it for yourself instead of for a publisher. Of course, you *may* find a publisher, or one may find you. But that is not the object to have in view. Dependence upon the incorporated presses is as bad as dependence upon the incorporated show producers. It is not necessary. And it is distinctly bad for both the presses and the producers.

The Little Theater and the Little Writer is perhaps an answer to a good many troublesome questions.

I HAVE been asked to advise on the 'taking in' of magazines, to use an old expression. Well, you can't take them all. There are too many hundreds of them. Judging from the experience of publishers, people are less and less subscribing for the popular magazines, and more and more buying them from the news stands. The subscriber was once the person sought, now it is the casual buyer; hence the appeal of front covers and sensational articles as quick, eye-catching selling devices. One pretty good magazine a month could be made out of the best in all of them. *The Literary Digest* does this in a general way; *Living Age* does it in another way; *The Reader's Digest* in another. Just as we take some of the book reviews to learn what books are being published, it might be a good thing to take *Poole's Index* to learn what magazine articles are being published, and then buy the ones we want.

But this assumes an earnestness in readers which does not widely exist. Reading has become the vice of idle moments, competing not too successfully with the trivial movie and the jazz radio program. For reading as an opiate, a time-killer, there is perhaps no advice to give, except to say that the reading habit, once established, can be trained in any channel, and a man is a fool not to do some *hard* reading—that is, reading which for him seems hard. It becomes easy enough upon acquaintance. The sounder the magazine the smaller the circulation, as a rule—the two exceptions being, I believe, *The Literary Digest* and *The Dearborn Independent*, which lead the list in point of circulation among serious magazines.

IN THE matter of books, however, the trend is the other way. Books of substance are going up in popular esteem. Little as Wells' *Outline of History* is to be esteemed as history, its large sale disclosed the willingness of multitudes to tackle a hard subject if only it is promising enough. And look at the astounding popular success of Will Durant's *Story of Philosophy* (Simon and Schuster, $5) ranking as a 'best seller,' and this in spite of the fact that it is dependable as history and scholarly as a compendium of philosophy. Dr. Ripley's *Main Street and Wall Street* (Little, Brown and Co., $2.50) is also opening up a sensational success, though it deals with finance.

Of course, the real book of real finance is yet to be written. No financier can write it. The average banker is too much engrossed manipulating the game as it is played today, and the average professor of political economy, in trying to make the rules of the game appear to be fundamental and scientific, which they are not.

The best book on fundamental finance that I have seen of late is written by a professor of chemistry. I must review it for you one day. The author is Frederick Soddy, M. A., F. R. S., professor of chemistry in the University of Oxford, and Nobel Laureate in Chemistry, 1921. The title is *Wealth, Virtual Wealth and Debt, the Solution of the Economic Paradox* (George Allen and Unwin, Ltd., London). Whereas Dr. Ripley's book will have a wide reading by Americans because it appeals to the stockholding habit among us, Dr. Soddy's book should be sought out by those who want to know what it is all about. And unless I am wholly wrong, finance in the United States is coming into such a position that it will soon be about every man's ears, and we shall renew the national interest which mounted to such intensity during Andrew Jackson's fight with the National Bank, during the Greenback scare, and during Mr. Bryan's advocacy of the free coinage of silver.

A Doctor Looks at Doctors

(*Continued from page 15*)

This counsel carried me headlong to despair, and in that despair I turned to Baltimore. There I knew there was a wise man who united qualities of head and heart in godlike manner. He had made me feel, as he had probably made thousands of others feel, that he had a unique strain of friendship for me. I admired him, reverenced him, loved him. I sought him out. It was early evening when I arrived at his door. I told him my mission, but he would not listen to my story. He and his gracious wife were about to take a short drive and I must accompany them and return to dine with them. As we went through the door he inquired casually where I had put up. On our return I found the contents of my bag spread upon and in the bureau of their guest room. Soon after dinner he withdrew, saying some urgent matters demanded attention. When I went to my room I found a scrap of paper upon which was written, 'Gone to Milwaukee. Stop here until I return.'

When I spent an hour with him, three days later, one would never have suspected that he had anything in the world to do save to learn how I had worked and played, lived and loved.

The only reflection he made upon my impaired lung was, 'Nature did one of her best repair jobs for you.'

When he had completed his examination, and I awaited the verdict, he said, 'What are you going to do, now?'

'Whatever you tell me,' I replied.

'Very well, then. Stay on here a day or two longer; I want to think over your case.'

THE next day he asked me to his study and put an arm affectionately around my shoulders; his saturnine features lengthened, while his Celtic eyes took on an expression of greater gravity, and he said, 'Dear old Alcibiades, it's just as serious as it can be. You've got a tumor of the brain.'

The more reasons I gave him for the incorrectness of his diagnosis, the more obdurate he became. Finally he displayed not a little offense that I should pose my opinion against his and professed to be injured.

For a moment I forgot that joking was as essential to him as food, and indulged in with infinitely more relish. More than once in early life his propensity for perpetrating practical jokes had come near to thwarting his prospects, and in his maturity it often brought him to the brim of the caldron. Then like a flash it came to me that it was the unruly half of himself that had the whip hand this time, the half that made him go into the garden, after an attack of gravel, gather a handful of tiny pebbles, and put them in the excretion to dumfound his physicians when they came to examine it.

My recovery had already set in. I was not an 'interesting' case to him. I was an individual who had attempted to live beyond his means, to work beyond his strength. I was a boat with one of its propellers gone that had striven to keep abreast with fully equipped ocean liners and by so doing had strained another propeller. I was a victim of the disease of the ardents, and it required an ardent to detect it.

My recovery was neither rapid nor dramatic, but it was as complete as an ardent's can be, and before it was accomplished, I had redrawn my map of life on a somewhat smaller scale.

Soon a new interest, growing out of the branch of my work in which I was taking keen interest, began to absorb me: the founding of an institution in which nervous and mental disorders, especially those without recognizable or detectable organic change, could be adequately studied and properly treated.

AFTER twenty years of enormous labor, the war broke out. My colleague in the Neurological Institute, Pearce Bailey, was at once assigned by the Surgeon General to most important duties in Washington. Though our infant enterprise in 67th Street had cast off its swaddling clothes and was prancing about dressed conspicuously and becomingly, it still needed discipline and direction. Nevertheless, Pearce Bailey had small difficulty in convincing me that I should take a commission and assist him to put in effect the elimination tests of officers' training camps. I presented myself for examination and was accepted without the slightest hesitation. After several months of that work I was assigned to duty with the American Red Cross in Italy, and remained there until after hostilities ceased. I returned to Washington and presented myself for examination and discharge.

I had been one of eight thousand that the *Aquitania* deposited in Halifax, and *en route* to Montreal the train got snowbound. There was a difference of about a hundred degrees Fahrenheit between the temperature within and without the car in which I traveled. A mild bronchitis was one of the results. It had not fully passed when I confronted the board of examiners. The young man entrusted with the chest examination concentrated eagerly upon the thoracic deformity and the adventitious sounds to be heard in the chest on coughing and deep breathing. I sought to enlighten him by telling him it was something Nature had saved from a conflagration that had once nearly consumed me, but he looked at me at once so knowingly and so pityingly that I gave over the attempt and asked him instead where he lived and worked. He informed me that he was instructor of physical diagnosis in a well-known university. If automatons could have diseases, I should select him for their physician.

I TIRED of his attention when he suggested that I return the next day for an X-ray examination. He was determined to substantiate his findings with what he no doubt considered irrefutable proof. Fatigue lessening my inhibitions and his self-sufficiency exciting my anger, I told him that I had been away from my work eighteen months and I proposed to go to New York that evening.

I received my discharge: thirty per cent incapacitated, active tuberculosis right lung, inactive left!

His conduct, attitude, and conclusion did not depress me nearly so much as the conclusions of my medical advisers thirty, or twenty years before, but they still gave me sufficient concern to lead me to consult a friend who was then retiring from the practice of his profession after a brilliant career, a man of penetrating clinical insight, abundant horse sense, and sound judgment.

I told him of my experience in Washington; he expressed great astonishment, and greater after he had examined me.

'No,' said he, 'you haven't tuberculosis; in my opinion you never have had, and at your age I feel reasonably sure that you never will have.'

The only unpleasant thing about that conference was my friend's reference to my age.

Forty years ago we did not know nearly so much about inflammation of the lungs and pleura as we do today. There is no doubt that I had had pneumonia and that it was accompanied, as it nearly always is, with pleurisy. In this instance the sheath-shaped membrane whose one surface covers the lung and whose other forms the lining of the chest exuded pus, or a fluid that became purulent, thus constituting the disease empyema. With that condition I had struggled for a year, and its results had affected me for a lifetime. Today the pus in the pleural sheath or cavity would have been discovered and a surgeon summoned. The battle between the pus cells and those white blood cells which have many-shaped nuclei would have been merely a skirmish and not the long-drawn-out struggle it was, attended with devastation of the respiratory space beyond reconstruction but not beyond compensation. Forty years of hard and varied work testify that compensation occurred in my case.

NATURE does not often overcome empyema without the surgeon's aid; but she did in this instance though none of the doctors save one seemed to realize it. To most of them I presented the pattern of tuberculosis, so they cut the cloth from that pattern.

It does not seriously reflect upon the skill of my first medical attendant and his consultant that they did not find the pus in the right pleural cavity. They suspected it was there, else they would not have repeatedly thrust a trocar into the thorax. But for the others to assume that I had tuberculosis because I had once for many months had fever of a certain type, cough, shortness of breath, emaciation, and loss of strength, and because the chest, when examined, revealed signs of 'consolidation,' is a fair example of the failure with which I charge physicians—that is, they are so prone to occupy themselves with the theoretical requirements of a case that they lose sight entirely of the human being and his life story.

They deny this charge, but individual experience supports the allegation, and the popularity and success of numerous therapeutic organizations and agencies outside the medical profession prove it. It is the patient who should be treated in most instances, not the disease.

Nature is able to cope with the majority of diseases that do not have their origin in the patient's ancestry. All that the physician can do is to help Nature, or at least not to handicap her, and to invoke the aid of a surgeon to remove a new growth or an organ which has already been destroyed by disease or accident.

That is all that he does when he gives antitoxin or salvarsan; that is what he does when he solicits his surgical colleague to remove an appendix which is threatening to burst, a spleen which has ruptured, or a swelling which is occluding a vital space or passage. That is what he does when he earns the reputation of saving life.

The conduct of physicians that I, as a patient, have encountered convinces me that either they do not appreciate that constituent of personality which psychologists call the affects, and which is usually called the emotions, and the importance of the rôle which these affects or emotions play in conditioning his destiny, well or ill, or they refuse to be taught by observation and experience. There is probably no physician who has not seen patients whose disorders have resisted his efforts restored to health by an appeal only to what is popularly called the 'mind.' If there is such a physician, he must have had small contact with temperamental people, and he must frequently have turned a deaf ear to dinner-table neighbors.

THERE is one medium in which Nature does her best work. It is fearlessness. Apprehension halts Nature, fear fetters her. We profess to believe it, but our conduct belies our profession.

I recall sending a vigorous, athletic man of fifty-six, the source of whose increasing sciatica I was endeavoring to fathom, to a well-known throat and nose specialist to get an opinion on the propriety of removing tonsils that looked fairly healthy. When the doctor got a report from the pathologist to whom the secretion pressed from the tonsils had been sent, he told the patient that his tonsils should be removed, and then added, 'At your time of life, a tonsil operation is a serious matter, just as serious as an operation for gallstones. I am going to have a vaccine made and I want you to be inoculated every five days for three weeks; then I shall operate.' I was present and heard the conversation. On reaching the street, the patient said, 'When I was young I was afraid to die. I don't think I am afraid now, at least not much afraid save of death from one cause. I don't want to be scared to death. If my tonsils must come out, you must find someone else to do the job.'

The physician should not only thwart fear, he should engender courage. Frequently he does the reverse, not purposely, but because of obtuseness, lack of intuition, or of personal experience with disease. Intuitiveness is a very valuable asset in the practice of medicine, and personal experience with painful or protracted illness is another.

In what way could fear be more successfully engendered in an ambitious youth than to have it conveyed to him indirectly that he was the victim of tuberculosis, or in an impressionable young man than by telling him he had an uncommon display of that dread disease?

No one who inquired closely and understandingly into the life I led from the age of twenty-two to thirty-two could have failed to realize that my bodily mechanism, even though it was not handicapped, would be likely to creak and snap under the strain to which it was being subjected. Not one of the half-dozen famous men whom I consulted took into consideration the temperament of the individual, or the kind of life he was leading. None of them was interested to know that on arising at seven I would hurry to a 'studio' and try valiantly for twenty minutes to get in a knock-out blow on the body of the extraordinary septuagenarian who presided there, and then submit to a rub down that would energize me for the day. Not one of them knew or cared to know that I was making every day from twenty to thirty calls, chiefly in the tenements; few, if any, of them were curious to learn that my evenings were spent writing editorials for medical journals, making extracts and summaries of foreign medical literature, getting ready the material for a book; and not one of them inquired how many dispensaries I was attending, or whether I still did obstetrical work at my soul's expense.

Had they expected me to tell them that it was my custom after a hard day's work to have my dinner on my desk, then dictate to a stenographer for two hours, follow that with an hour of correction and elaboration of the manuscript, then breathe a sigh of relief, saying, 'Now for some genuine relaxation,' and take the relaxation in the form of a rarebit and a draught of ale, then a long cigar and an hour with a poet or romancer, and so to bed, I should have thought it a pose and they an affectation. Their inquiry was limited to 'What do you complain of?'

Pen-and-ink impression by
GERALD VAN DER HEYDEN

With two exceptions my doctors were not interested in *me*. They were interested in a morbid condition of my body which was enigmatic to them, and in a repair job of Nature the like of which they had not previously seen. They saw the pathological specimen which I presented, not the psychological problem. Because the symptoms and signs of disease did not conform to any definite type, they made an assumption prejudicial to my welfare, interruptive of my usefulness, and destructive of my happiness. Of course they may have thought that, being a physician, I knew the importance of living a hygienic life and how to do it; but my very presence should have shown I was ignorant or culpable.

I find it easiest to forgive the young man who gave me such a distressing discharge from the Army. He was so sure of himself and he felt so sorry for me! The professor who was positive that only in Arizona could I hope to keep alive never betrayed the smallest astonishment, when I met him now and then in later years, that I had been able to withstand New York; and so far as the diagnostic wizard was concerned, he was so absorbed with sentencing other unfortunates that he had neither time nor inclination to read about the reprieves that had been granted. They have both gone to their reward, but I forgave them long before they started.

DOCTORS are constantly trying to standardize disease. When they encounter a case that does not fit the specifications furnished by clinician or pathologist, they reject it. That is, they assume that it must belong in some other category. One of the reasons why training in psychiatry would be a valuable thing for every practitioner or specialist is that it would teach him that disease cannot be standardized, that the individual must be considered first, then the disease.

Standardization of treatment is not so bad as standardization of disease; still, it merits a vigorous protest.

Standardized treatment works a cruel hardship on the individual who happens to have a very common disease in his own very personal manner.

My observation and experience convince me that when physicians become engrossed with what is called scientific medicine they not only get divorced from the art of their profession, but they acquire a degree of contempt for it which in many instances amounts to scorn. When they do this they give a leg up to supernaturalists, they prepare a cropper for themselves, and they render the sick a profound disservice.

Our medical schools are not giving adequate consideration to the material that is being presented to them for shaping and developing: the mind of the prospective doctor. They concentrate exclusively on disease. They neglect the student who is to prevent, interpret, and combat it. It is only human nature for the man who deals daily with bodily deformities and mental shortcomings to grow superior to his world. If he happens to be a big and vigorous man himself, this sense of personal fitness in a universe of bodily failures easily breeds the arrogance, bored tolerance, facile condescension, and autocratic dogmatism with which physicians are often charged. It would be a wise thing to devote a part of medical education to the mind of the physician himself, especially as it concerns his patients. For the glories of medical history are the humanized physicans. Science will always fall short; but compassion covereth all.

CHATS WITH OFFICE CALLERS

'You probably consider yourself a speller of average ability,' remarked ***the Casual Caller*** as he dropped into the office. 'Here is a little test, a list of ten words; and I'll defy you to spell half of them correctly.'

We accepted the challenge—and misspelled six of the ten words. The list follows:

kimono	battalion
supersede	picnicking
paraffin	rarefy
tranquillity	sacrilegious
naphtha	liquefy

* * *

'Some day,' said ***the Tourist,*** when Douglas fir becomes scarce you may see lumbering done at the bottom of a lake. Years ago volcanic eruptions occurred along the backbone of the Cascade Mountains, causing many natural dams behind which lakes were formed. The forests in these artificial valleys were covered with water and the trunks of those stalwart old Douglas firs are still standing on the bottom of the lake. One of my western friends, connected with the forestry department, dropped a charge of dynamite beside one of the submerged trees and the explosion blasted off a huge section which he retrieved by means of tackle, for the water had so weighted the wood and soaked into it that it would not float. He dried the section and it is very good lumber, a bit light and brittle perhaps but worth salvaging. We'll probably never have to use this submerged, water-soaked timber, but it's there when we need it and will be there for centuries.'

* * *

'A Marine officer whom I met on a train in the West,' said ***the Newspaperman,*** 'told me the inside story of the General Butler-Colonel Williams episode at San Diego a few months back—an episode so colored in the newspapers, you may remember, as to give Butler the appearance not only of having violated hospitality but of having betrayed a friend. I can vouch for the reputation and the reliability of the man who told me the story; but of course the story came to me secondhand, and may be a bit inaccurate as to details.

'It seems—so the Marine officer told me—that a year or so back the Marine Barracks at San Diego had the name of being one of the worst bootlegging places in Southern California. It was considered one of the safest places in the region to keep liquor, safest because, like Caesar's wife, it should have been above reproach. The condition was known, but the remedy was difficult. It was just about that time that Smedley Butler ended his service as police director in Philadelphia and returned to active duty in the Marine Corps.

'Butler was called to Washington and given command of the San Diego depot, with strict orders to clean up the place. "You are the man for the job," the Secretary of the Navy is reported to have told him. Well, General Butler hadn't been in San Diego very many days before he *did* begin on the job; but he committed that unpardonable sin (in America) of *starting at the top* instead of at the bottom. Instead of court-martialing a few privates and then quickly hushing the matter up, he court-martialed officers, from lieutenants on up the scale. Colonel Williams, who was arrested a few days after Butler's arrival, as you may remember, was convicted of serving liquor at a party and was reduced a few numbers in file—a sentence that was considered by many as surprisingly light.

'A terrible ruckus was stirred up, and Butler was accused of almost everything from ingratitude to insanity. Those higher up, when they saw the way the newspaper wind was blowing, promptly got out from under and left the General "holding the sack." And of course as a good Marine officer, he had to bear the brunt of the attack and remain silent. But he didn't remain inactive. As I recall it, he rounded up about 150 men and officers in a thorough housecleaning. And there hasn't been a drop of liquor smelled in the San Diego Marine Barracks from that day to this.'

'It is strange how stock speculators love to delude themselves,' observed ***the Financial Economist.*** 'The recent great stock boom in Wall Street was fostered by underwriting banks and supported by pool operators, on promises of big distributions of profits by industrial and railroad corporations. Stocks paying normally from four to six per cent dividends were churned up in the market to $150, $250 and more a share, on warmly nursed rumors that there would be large melon cuttings in the shape of stock dividends. Some of these promised stock dividends have materialized: they have been followed immediately by a sharp slump in the prices of those particular securities. One company, paying four per cent dividends, whose stock had been worked up to 150, increased its dividend to six per cent, to the intense disappointment of the speculative element, who were actually disgruntled over a cash distribution in lieu of the watered stock for which they were hungering.

'Now the stock dividend is the worst fallacy in speculation. A schoolboy can realize that a company which pays ten per cent stock dividends yearly, in ten years has doubled its capital, and thereby reduced its capital value per share by fifty per cent.

'Stock dividends fail to increase the stockholder's equity in a corporation, and they do not increase his chances of sharing in future profits. Intrinsically, they are a disadvantage so far as security owners are concerned. I heard a good illustration of the true inwardness of the stock dividend the other day. If a company, for instance, is organized with a share capital of $100,000, for which it issues one thousand shares, each share represents one-thousandth of its assets. The concern, at the close of the first year, earns $20,000 profits; its net assets now amount to $120,000, and each share has a book value of $120.

'The directors pay a cash dividend of five per cent, and in doing so, they reduce the book value of each share to $115. Some of the shareholders object to the comparatively small dividend, insisting upon a further distribution; so the directors pay an additional dividend of fifteen per cent in stock. The stockholder, who at the beginning owned 100 shares, now possesses 115 shares. But what has he really gained? The book value of his shares has declin in proportion to his stock dividend. The are now 1,150 shares of stock outstandi but the value of the company's assets h not altered; it amounts to $115,000. T stockholder has 115 shares of a book val of $100 each, whereas he had before 1 shares of a book value of $115. It explained that the disadvantage of a sto dividend lies in the fact that a stockhold cannot realize upon it without reducing h proportionate ownership in the compan So it is easy to understand the folly boosting share securities to fabulous figur in anticipation of a stock "melon." T stock dividend may be a good speculati lure, but intrinsically it is a snare and delusion, the precurser of lower dividen and a top-heavy structure of watered capita

'Such persons who have had the opportuni —or I might say the misfortune—of fr quenting some of the criminal courts of t metropolis,' said ***the Lawyer fro New York,*** 'probably would have be amazed on observing the tactics and liste ing to the arguments of some of the "di tinguished counsel." New York can boa of many of the best lawyers in the countr but it also admittedly possesses some the worst legal talent to be found an where on earth. The result is that a mov ment is under way to provide harder tes for would-be lawyers. It is charged th the legal profession is crowded with i competents, and a petition has been fil with the Court of Appeals for the holding a public hearing to thrash out the matter raising the requirements for admission candidates to the bar. It has been disclos that young men who know almost nothing American history, of American literatu whose intellectual backgrounds are barr and infertile, and who know only enou about the law to pass a formal bar examin tion, are obtaining the right to be enrolled licensed members of the profession.

'The experiences of members of the co mittee on character and fitness of applican for admission to the bar make interesti reading. According to them, many of t applicants had never even heard of *T Federalist* or of Bryce's *American Commo wealth,* while others were unable to name single member of the President's Cabin or a single Senator from any state. 1,208 candidates who took the state b examinations, 187 said that Alexander Ha ilton was once President of the Unit States. One applicant expressed the beli that Magna Charta was a naval expediti and another described Andrew Jackson a Union general of Civil War fame. Sor applicants were scarcely able to speak write grammatical English, and othe were described as immigrant boys wh "know little and care less about our form government, and are totally without know edge of or feeling for the history a background of American and English i stitutions and government." There's n reason why the legal profession should l open to everyone who applies for admissi to it, and the state certainly has a right a a duty to establish reasonable standards f admission.'

CAN YOU TELL ME?

Question: What is the term of office of the president of Germany and is he eligible for re-election?

Answer: The president of Germany is chosen by direct vote, his term of office is seven years, and the incumbent is eligible for re-election.

Q.: What is the amount of money spent annually for insurance premiums in the United States?

A.: The annual premiums paid are approximately as follows:

Life insurance policies	$2,500,000,000
Fire insurance	713,203,549
Ocean marine	39,612,681
Inland marine	24,223,288
Tornado, windstorm and cyclone	26,019,259
Plate glass	16,250,992
Hail	11,398,894
Steam boiler	6,122,278
Riot, civil commotion and explosion	1,470,272
Collisions, exclusive of automobile	1,668,801

❦ ❦ ❦

Q.: What were the gross and net earnings of the national banks for 1925?

A.: The gross earnings of the national banks for the year ending June 30, 1925, were $1,124,000,000; the net earnings after payment of all expenses were $365,000,000.

❦ ❦ ❦

Q.: What was the gross and net operating income of the railroads for 1925 and what taxes did they pay?

A.: The Class I railways of the United States representing a total of 236,771.21 miles earned an operating revenue of $6,186,608,567 in 1925; the net railway operating income was $1,136,984,243; the taxes paid amounted to $363,242,428.

❦ ❦ ❦

Q.: Where can I get information regarding soldiers of the Revolution, full names, from where enlisted, numbers of regiments and dates of discharge?

A.: The Adjutant General's office in Washington has a collection of Revolutionary War records and a request for information relating to a particular soldier (or officer) of that war will be given prompt attention upon receipt of sufficient information by which the record can be identified, such as the designation of the organization in which the soldier served, or the date and place of enlistment and the names of some of the company and regimental officers under whom he served. This collection of Revolutionary War records is far from complete, however. The Commissioner of Pensions, Washington, D. C., has some Revolutionary War records and the authorities of the various states also have some. The following is a list of references in the various states:

Connecticut—Adjutant General of the State of Connecticut, Hartford.

Alabama, Mississippi and Georgia—Georgia Historical Society, Savannah.

Maine and Massachusetts—Secretary of the Commonwealth of Massachusetts, Boston.

Maryland—Adjutant General of the State of Maryland, Annapolis; Maryland Historical Society, Baltimore.

New Jersey—Adjutant General of the State of New Jersey, Trenton.

New York—Director, New York State Library, Albany.

Pennsylvania—Librarian, Pennsylvania State Library, Harrisburg.

Tennessee and North Carolina—North Carolina Historical Society, Raleigh.

Rhode Island—State Record Commissioner, Providence.

South Carolina—State Historical Commission, Columbia.

Illinois, Kentucky, West Virginia and Virginia—Librarian, Virginia State Library, Richmond.

New Hampshire, Vermont, Delaware—Commissioner of Pensions, Washington, D. C. (only).

During the Revolutionary War, Georgia embraced the greater part of the territory now known as Alabama and Mississippi; Massachusetts embraced the territory now known as Maine; North Carolina that now known as Tennessee; Virginia that of Kentucky and Illinois. Ohio was known as the French Territory until 1788.

❦ ❦ ❦

Q.: How are the Philippine Islands governed?

A.: The Philippines are a government dependency of the United States, to which country the islands were ceded by Spain December 10, 1898. They are governed by a governor-general and a legislature which was established by the Jones Act of the United States Congress in 1916 and succeeded the Philippine Commission under which the affairs of the Islands had been administered since July 1, 1902. The senate has twenty-four members, the house ninety-three. The members of the legislature are elected by popular vote except two senators and nine representatives who are appointed by the governor-general. The cabinet of the governor-general, consisting of the secretaries of the six executive departments (interior, public instruction, finance, justice, agriculture and natural resources, and commerce and communications), is made up of Filipinos elected by popular vote with the exception of the secretary of public instruction, who is also vice-governor.

❦ ❦ ❦

Q.: Who drove the last spike in the first transcontinental railroad and was it a golden spike?

A.: The Union Pacific Railroad was built west from Omaha, the Central Pacific east from Sacramento, and on May 10, 1869, the ceremony of connecting the two roads was held at the place of junction, Promontory Point, Utah, which is located at the north end of Great Salt Lake. For this ceremony there was provided a specially prepared and finished tie of California laurel wood. David Hewes, a prominent Californian, had a golden spike cast and presented it for use as the last spike. This golden spike was driven by Governor Leland Stanford of California, aided by a number of prominent railroad men and public officials. Immediately after the ceremony the laurel tie and golden spike were removed and a regular service tie and iron spike took their places. The golden spike is now in the museum at Stanford University, Palo Alto, California. The laurel tie was in the possession of the Southern Pacific Company in San Francisco, but was destroyed in the conflagration which followed the earthquake of April 18, 1906.

Q.: Kindly give length and breadth of the U. S. S. West Virginia, U. S. S. Mississippi and U. S. S. Oklahoma.

A.: West Virginia, length 624 feet, breadth 97 feet 3½ inches.

Mississippi, length 624 feet, breadth 97 feet 4½ inches.

Oklahoma, length 583 feet, breadth 95 feet 2½ inches.

❦ ❦ ❦

Q.: How many Negro slaves were there in the United States at the beginning of the Civil War?

A.: It is estimated that the fifteen slaveholding states including Delaware, with 1,798 slaves and 19,829 free colored, and Maryland with 87,189 slaves and 83,942 free colored, had, in 1860, a total population of 12,240,000 of whom 8,039,000 were white, 251,000 free colored and 3,950,000 slaves.

❦ ❦ ❦

Q.: Which is the older city, Detroit, Michigan, or St. Petersburg (Leningrad), Russia?

A.: Leningrad was founded June 29, 1703, by Peter the Great. The first settlement in Detroit was made July 24, 1701, by Antoine de la Mothe Cadillac.

❦ ❦ ❦

Q.: How many Winnebagos are living and where?

A.: On June 30, 1926, there were 1,096 Winnebago Indians at the Winnebago Agency, Nebraska, and 1,328 Winnebagos at the Grand Rapids Agency, Wisconsin.

❦ ❦ ❦

In a recent issue of THE DEARBORN INDEPENDENT an error in statement occurred in answering a question as to the hanging of the national flag. Instead of reading, 'When the flag is displayed vertically over a wall or window the union should be to the right of those who view it,' it should read, 'When the flag is displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right, that is, to the observer's left.' The number of letters calling our attention to this has been gratifying.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

I READ IN THE PAPERS

Telling How 'The Captive' Was Withdrawn

The interesting interlocking relations existing among the theatrical and motion picture producers of New York—as well as certain of their business tricks and ethics—were dealt with by the *World* in its articles recently concerning the withdrawal of one of the Broadway plays. Under the date of February 16, the *World* predicted that *The Captive* would be withdrawn by the group producing it, that an effort would be made to vindicate the show and that subsequently an attempt would be made by another producer to restage it. The predictions made in the article (which, incidentally, prominently mentioned Otto H. Kahn, widely heralded as a patron of the arts) were all fulfilled a few days later. At this writing the attempt to restage the play, which deals with sex perversion, has not been successful.

'Although this development [the predicted withdrawal of *The Captive*] seemingly is a victory for the city authorities who started the current stage clean-up campaign,' the *World* stated, 'in reality it resolves into nothing more than a clever bit of chess. For negotiations already are under way by which *The Captive* will be put on by another producer after a very short suspension.

'Withdrawal of the play is a concession to expediency rather than a confession of defeat. It is reported due to the feeling of the Famous Players-Lasky Corporation, which controls the Charles Frohman Company, now presenting *The Captive*, that public reaction to a continued defense and championship of a sex-perversion play might be prejudicial to this organization's far more extensive interests in screen productions.

'Indications are that in abandoning the show, Gilbert Miller, the managing director, through counsel, will defend *The Captive* as a "problem play" treated in a dignified and artistic manner on a high moral plane, and will admit it is being withdrawn because that course is expedient.

'It is known that Mr. Miller already has been in conference with Horace B. Liveright, book publisher and producer of *The American Tragedy*, the dramatization of Theodore Dreiser's novel, now playing at the Longacre Theater . . . How much a canny move at chess this switch in the management of the play becomes is indicated by the fact that Otto Kahn, the banking genius behind Famous Players, also has been on occasion a sympathetic backer of Mr. Liveright and frequently is referred to as the "silent partner" in *The American Tragedy*.'

ɾ ɾ ɾ

Before electric signs were invented actors had to make their reputations by acting.—Springfield *Republican*.

ɾ ɾ ɾ

Speaking of the value of New York dramatic criticism (most of the metropolitan critics hailed *The Captive* as great art when they first reviewed it), Berton Braley contributes a neat bit of verse to 'The Lantern' column in the New York *Herald-Tribune*. In passing it might be noted that among the better-known New York dramatic critics are Percy Hammond, Alan Dale, Alec Woollcott and Heywood Broun—the latter a prime defender of the ultra-modern in all its phases. Braley's verse is entitled 'One Exception':

Alec writes of Percy
And Percy writes of Alan,
Ignoring both the drama and the mime;
Alan writes of Alec
And Alec writes of Alan,
But Heywood writes of Heywood all the time.

Then Percy writes of Alec
And Alan writes of Percy,
Completing thus a circle most sublime;
But Heywood writes of Heywood
And Heywood writes of Heywood,
And Heywood writes of Heywood all the time.

War on School Histories

War has been declared on American school histories. The House Military Committee has been told that a number of these histories give erroneous and imaginary accounts of the part played by American fighters. Lieutenant Colonel Thomas J. Dickson, retired army chaplain, is quoted as saying that a number of American history authors have given merely their own opinions of what actually took place, rather than facts. For example, the comment of one historian was that with but six months' training the American troops were equal to the experienced troops of any nation.

ɾ ɾ ɾ

He Is a One-Man Bookstore Without Books

Some students give their lifeblood to hospital patients, to work their way through college. Others shovel snow, tend furnace, wait table or, if artistically inclined, do special decorating jobs for fraternity parties. But Lynn Wells, a student at Ripon College, Ripon, Wisconsin, has a way of his own.

Wells is known as the campus bookstore. On pretentious letterheads one reads that he deals extensively in books—foreign, out of print, suppressed, any kind at all. *Sink or Swim*, by the renowned Horatio Alger, is not too lowly for his business; nor, on the other hand, is *Canterbury Tales*, by the late Geoffrey Chaucer, too high. Surely his correspondents conclude, this campus bookstore, Lynn Wells, president and general manager, must be a pretentious establishment.

And yet the most unusual thing about the Ripon senior's bookstore is that it exists only in print, as a myth. A curious visitor, should he chance to search out Mr. Wells, would find him no doubt seated comfortably in his college study at West Hall smoking, studying, chatting. What books there are lie about quite as unsymmetrically as books usually do in such studies. With the exception of the undignified proprietor and his dignified letterheads, not a sign of the campus bookstore exists. But, then Wells is the store.

Wells' scheme is merely that of supplying Ripon College professors, the town's literati and the so-called intelligentsia of the student body with books which they order. When the volumes come they are immediately delivered, and thus no stock ever lies about. The clientele of the campus bookstore is, nevertheless, surprisingly large for Wells gradually has discovered obscure sources for books otherwise difficult to obtain. Nearly all of his orders go to foreign countries.

Wedded Bliss Among the Hopis

The secret of wedded bliss is found in Hopi land. The Hopis marry for love and remain in love with each other through life according to a whit adopted member of five Indian tribes. When the husband busy the wife sit beside him singing ol Indian love songs to cheer him in his work when the wife is weaving those gorgeou gray and black blankets and rugs for Fre Harvey and the tourist trade on the Sant Fe the husband in turn sings to her. Whe the Hopi maiden is ready to wed she a ranges her coiffure in a certain manne Then standing in front of her hut she signa the young man of her choice as he passes by An engagement usually results, but befor the marriage takes place the young ma must give his bride two-thirds of all hi worldly possessions. The marriage servic is simple but binding. Divorce is even mor simple. The wife puts her husband's ha outside the house and shuts the door. Th husband must then return to his mother o to his godparents. The elders of the villag subsequently review the wife's bill of com plaint. If it is found justifiable the husban is disgraced for life and is driven off th mesa into the desert to shift for himself a best he can. Divorces among the Hopi are exceedingly rare, there being but thre on record in the past eighteen years.

AN INDIAN PRINCE has his private train equipped with a huge tobacco pipe, mounted in the locomotive, from which smoke is piped to each compartment for passenger's use.

THE NEW YORK Y. M. C. A. has given two thousand bachelors quartered in its buildings a year in which to find a wife and home. The last census gave New York City 887,000 bachelors between the ages of twenty-four and thirty-four.

A GROUP OF PARIS scientists recently tested hat heat. At a temperature of 97 degrees Fahrenheit, the heat beneath a sporting cap was found to be 98.6 degrees, a derby 92 degrees, a felt hat 86 degrees, a stiff straw 79 degrees, and a panama only 77 degrees.

THE FIRST MACHINE GUN, invented in 1717 by James Ruckle, is described as follows: 'The gun is a revolver and is mounted on a tripod; it has a single barrel and a rotation chamber. The shape of the chambers and of the bullets may be changed or varied, some for shooting square bullets against Turks and others for shooting round bullets against Christians.'

FIFTY PER CENT of the paintings 'by old masters' in all the collections of the world are fakes, in the opinion of a noted New York painter.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the necessity for Finance adopting the modern principle of Industry.

Sinclair Lewis set out to write a preacher book. He lived with preachers, had long talks with preachers and himself preached. And now a preacher, William L. Stidger, says that after it all the author of *Main Street* knows less about preachers than those whom the Scriptures stigmatize as having eyes that see not and ears that hear not. (p. 1)

Mr. Stidger says in substance that preconceived notions of what a preacher ought *not* to be have so blinded the novelist as to what a preacher really *is* that in his new book, *Elmer Gantry*, he has created a Frankenstein monster of clerical degeneracy that no one will recognize. (p. 1)

If one borrowed 20 cents from another and had to pay back 49½ cents it would obviously be a dear transaction for the borrower. Yet this is what is happening in millions of dollars in connection with bond issues. For every million borrowed over two millions have to be returned. This is a strain that will snap the spinal column of the nation if saner methods of financial surgery are not forthcoming. (p. 2)

'Girls will be girls' is what they used to say in the nineties, and now it is 'girls will be boys.' In the days when the Gibson Girl's piquant personality peeped out from the pages of popular magazines bobbed hair was unknown and frocks were thirty-six inches to the yard. Vachel Lindsay shows that in those days many other things that clash with today's notions were typified by the Gibson Girl. (p. 4)

After reading Inez Marks Lowdermilk's article we are forced to the conclusion that Japan knows far more about us than we know about Japan. One thing we don't seem to realize is that Japan's education system is considered by many the best in the world, but more important still, that the Japanese consider peace an essential to continued progress and look to America to help them out. (p. 6)

To say that every person has at least one book in him does not mean that every person has swallowed a minimum of one volume. It means that there is in everyone sufficient personal material for a book. But how is this material to be got at? This thought is in itself food for a volume. (p. 8)

After telling us where the people of the British Isles came from Professor Jenks presents a fine analysis of what resulted from this fusion of many races—the Englishman. (p. 12)

What a doctor thinks about doctors is a thing that it is usually difficult to find out. The general idea is that a doctor is so busy looking after other people that he has no time to look at himself, but another doctor can. In this case Dr. Joseph Collins gives a very interesting diagnosis. (p. 14)

'Mary had a little lamb, its fleece was white as snow.' Who is there living in this land, and in many other lands, who has not learned these lines in early childhood and never forgotten them? It is the supreme epic of those who are very, very young, with its appeal to budding sympathies and expanding outlook. Here we have Mary telling her own story as well as that of the lamb. (p. 16)

Here are some opinions from readers regarding articles that have recently appeared:

Yakima, Wash.

I read with more than passing interest in a recent number of THE DEARBORN INDEPENDENT, the article by E. J. Clifford, entitled: 'South when you mean North.'

I am glad that this article on education appeared in your magazine. It deals with rather a startling theme, and the wonder is that teachers have not ere this taken it up. The Clifford theory is deserving of attention from the teacher fraternity.

Although I have spent no inconsiderable part of my life in the open, with a record of 3,027 miles horseback in one year, mountains, plains and desert hills, my associates largely Indians, my sense of direction has ever been faulty.

Not until I read the Clifford article in question did I realize the possible cause of this undeveloped sense of direction with which I have ever been handicapped. I recalled my earliest school days back in the Monongahela hills of the trans-Allegheny. 1st . . . log cabin with split sapling chestnut benches facing the south. 2nd . . . seated facing the west. 3rd . . . lumber built schoolhouse seats facing the north.

Geography and history were my favorite studies. Now, when I come upon a stream running in the wrong direction or a trail that has been blazed the wrong way, I will simply reverse the facing of those old open wood-fire schoolhouses, and get out of the dilemma pronto.

L. V. MCWHORTER.

Lakewood, N. J.

I probably never would have subscribed to your paper if I had not accidentally picked up a copy and scanned your editorials. Since then I have read each and every issue.

A great politician was speaking over the radio the other day about the great number of illiterates in the United States. I never knew I was illiterate until I read your magazine. At the rate the truth is twisted and turned by our American newspapers to suit the particular interests backing them, you may rest assured that three-quarters of the American people are 'illiterates' when it comes to knowing anything like the exact conditions existing in our country today.

I have discontinued reading newspapers altogether. I prefer to be called ignorant by those who are 'smart' through reading them.

If you know of any more publications in the United States that are still working heart and soul for the interests of the American people, I would be pleased to receive their names from you.

I am one of the millions of Americans who are searching for the truth.

FRANK V. WEAVER.

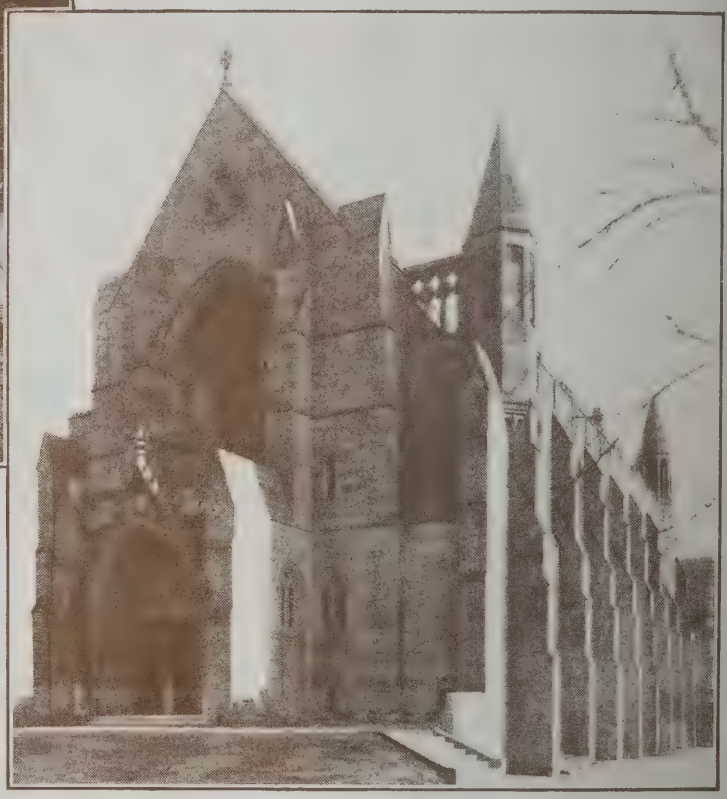
Ships That Pass Through the Ford Furnace

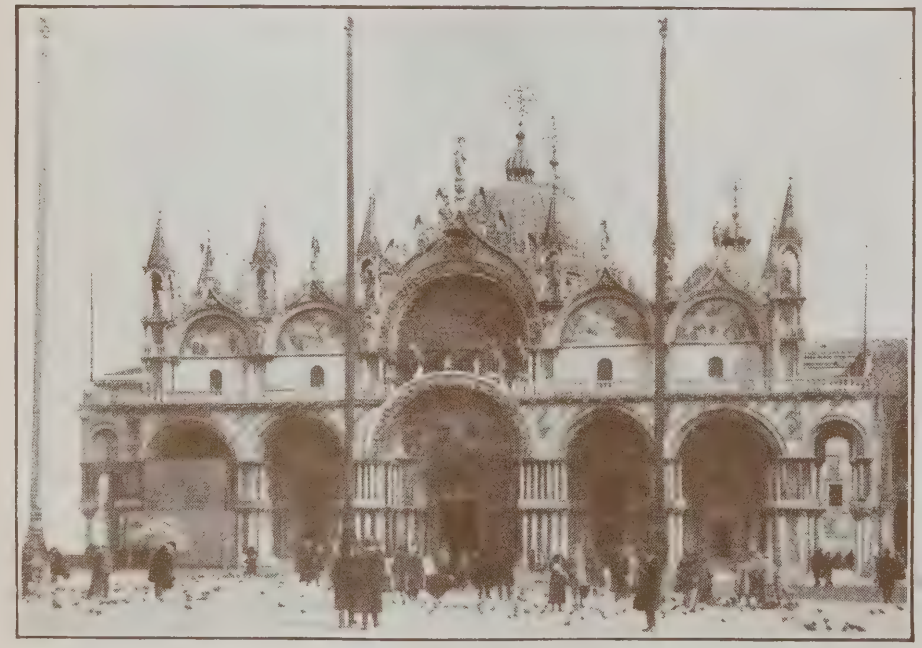
CATHEDRALS
Past *and* Present

Thought and Feeling of Ages Handed Down in Structural Gems

The Cathedral of Seville, one of the largest and grandest Gothic structures in existence, was built on the site of an old Moorish mosque, parts of which remain. It is claimed the body of Columbus lies here, and a wealth of art treasures are preserved in the cathedral. The Tower of La Giralda, seen here, was the minaret of the old mosque, and is adjacent to the cathedral. It was the model for Madison Square Garden Tower of New York. The top is surmounted by a bronze statue of Faith, thirteen feet high, which moves in the wind like a vane (giralda). —Publishers' Photo Service.



The Synod House of the Cathedral of St. John the Divine, like the other accessory buildings of that institution, is Gothic, while the cathedral itself is internally Byzantine and externally free Romanesque. When completed, this cathedral will be one of the largest houses of worship in the world. With the group of accessory buildings, it stands in a close of about twelve acres. —Keystone View.



Left—
St. Mark's Church, the oldest church in Venice, originally the chapel of the palace of the reigning Doge, was named for the patron saint of Venice. From the year 828, when seafarers brought home relics to place in the original church, the custom has persisted, and the church has come to be regarded as somewhat of a museum. —Keystone View.

Ships *That Pass Through the* Ford Furnace

By PIERCE CUMINGS

THE soul of transportation never dies. It may pass from one physical form to another, but it always carries on; it does not perish. Stage by stage, it goes forward to build the new on the shell of the old.

Progress of necessity demands sacrifice but progress does not demand waste. It is an immutable law of nature that nothing in this world is ever lost: there may be change, but no annihilation. This, therefore, one of the important problems of mankind to effect essential changes without waste, either in men or materials. Things no longer useful must be transformed into things that are useful.

The Great War wrought titanic changes in the world. At its conclusion new tasks had to be faced, new problems created. Great armies had to be returned to useful occupations, the vast machinery of war had to be converted to peace-time uses. Enormous quantities of equipment, hurriedly built in the rush days of the conflict, were forced into disuse with the cessation of hostilities. To restore these to usefulness, to transform them if need be until they could again be of utility—this was the problem confronting governments and people everywhere.

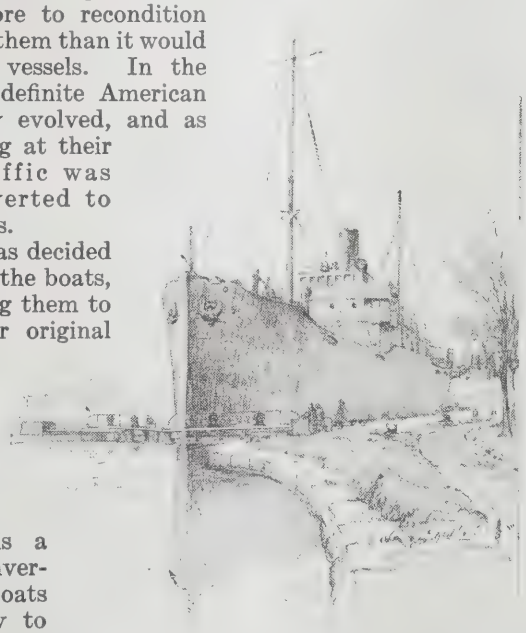
Wrapped up in this problem for the United States Government was the question of disposing of the Emergency Fleet, constructed at such prodigious cost to the American people. A few ships could be, and were, sold to private companies; others were operated by the Government; but vast fleets of them, after a few post-war voyages, were tied up in rivers and harbors in all parts of the country, there to rest in pathetic idleness, gaunt ghosts of the sea.

Idleness inevitably sapped their strength. As the years passed the ships deteriorated more and more. Rust took its toll. Some experts declared it would cost more to recondition and modernize them than it would to build new vessels. In the meantime, no definite American shipping policy evolved, and as the ships swung at their moorings traffic was gradually diverted to foreign bottoms.

At last it was decided to scrap 199 of the boats, but in scrapping them to carry out their original destiny.

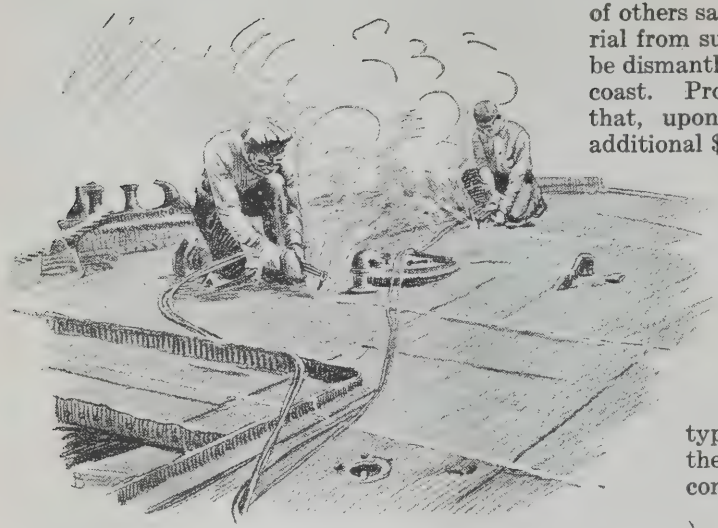
This article is not a discussion of the wisdom or lack of wisdom of that decision. It is a story of the conversion of the boats from sea duty to land duty. It is the saga of 199 ships: ships which, built bit by bit, metal on metal and wood on wood, were torn apart the same way and the materials used for the purpose to which they were originally dedicated—transportation!

Picture a dock, half a mile long. Ten ships line its side—one ship, rather, and nine remnants of ships—the latter in progressive stages of dismemberment. A panorama of shipbuilding can be seen here, but it is a panorama reversed, starting with a completed ship and ending with a husk.



Passing through a lock on the Welland Canal.

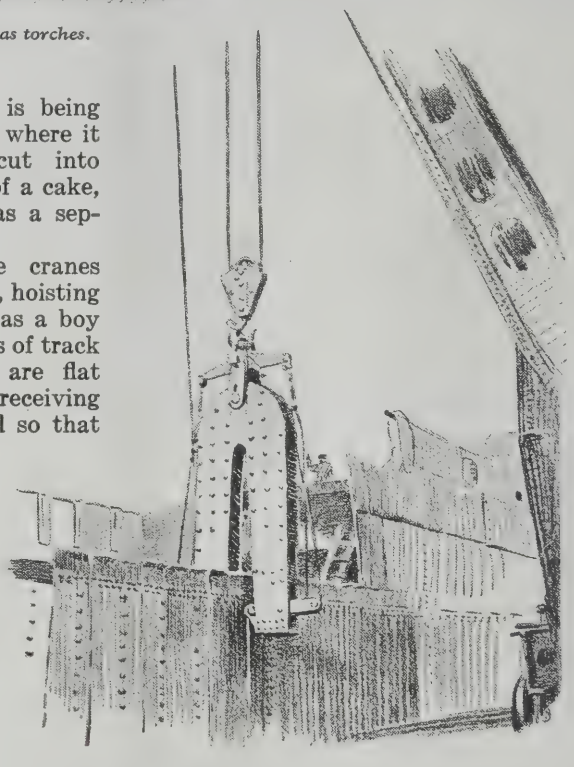
From one vessel the superstructure is just disappearing. From another the deck is being cut. Another, a mere shell, is being stripped of its side plates. (A crane bobs up and down from the shore, plucking huge slices of steel from the boat's side, for all the world like a dentist pulling teeth from some giant's jaw.) At the end of the line is a hull, or pan, barely



Cutting the deck plates with oxygen-gas torches.

above the water's edge. It is being eased into a floating drydock where it will be hoisted, drained, cut into rectangles with the precision of a cake, and thus pass into oblivion as a separate entity.

Flanking the dock large cranes slide back and forth on a track, hoisting these slices of ships as easily as a boy at jackstraws. Three other sets of track parallel the first; on them are flat cars and gondolas, each car receiving its particular kind of material so that sorting will not be necessary later. Loaded, the cars are switched to the piling grounds where the material is stored for future use, or they are drawn to the mills where the scrap is loaded into charging boxes, to emerge once more as molten steel. As one ship is torn apart the line moves forward and another slips into place. Three times in five working days the line moves—and another ship reverts to metal and wood.



Large roller shears for slitting the side, used experimentally on the 'Fondulac.'

The story of this transmigration of ships starts really on August 18, 1925. On that day a contract was entered into between the Ford Motor Company and the United States Shipping Board for the sale of 199 Government vessels at a price of $1,697,470. The ships were sold 'as is' and 'where is,' the company guaranteeing completely to dismantle and scrap them 'in such manner that they are rendered nonusable for other than scrap.' The contract allowed the company, however, to utilize the engines, boilers, auxiliary machinery and other equipment in its own plants, branches and subsidiaries.

It was stipulated that the company should not operate the vessels except to move them to the plant at which they were to be scrapped, and that it should not carry on them any cargo for its own account or for the account of others save scrapped material from such ships as might be dismantled on the Atlantic coast. Provision was made that, upon payment of an additional $51,470 for each of the submarine-type vessels or $16,470 for each of the lake-type, the company could use them for any purpose it saw fit.

The submarine-type boats gained their name from the company which built them, the Submarine Boat Corporat of Newark, New Jersey. They w the largest of the ships purchased, be 324 feet in length, and of a deadwei of 5,060 tons. The lake-type boats, called from having been constructed various Great Lakes shipyards, av aged 251 feet in length, and ranged deadweight from 3,300 to 4,155 to Fifty of the ships were submarines a the remainder lakers.

The vessels were scattered at vari points along the Atlantic and G seaboards, 109 at Norfolk, 21 at H Island, 30 at Jones Point in the Huds River, 10 at Staten Island, 9 at Oran Texas, 2 at Mobile and 18 at N Orleans. All except four had been bu during 1918 and 1919; of those fo two had been built in 1917 and two 1920. Most of the lakers had se service solely on the Great Lakes a in coastwise trade; a few—and so of the submarine-type—had compris part of the 'bridge to France' duri the war.

The first task was to get the sh from their moorings to the Ford plant, situated on the River Rou near Detroit, where the main scrappi operation was to take place. It is Fordson that the great steel furnaces the company are located, and there th the major reclamation and salva projects are carried forward.

The submarine-type boats could n enter the Great Lakes; they were t long for the locks of the Welland Ca between Lake O tario and Lake Er Arrangements w made, therefore, cut them apart the Atlantic seaboa so that, dissevere they could be load into the lakers a thus conveyed Fordson. Three the lake-type bo

KIPLING *Has a* Grouch

Because Neighbors Find Fault With His Farming

By HOWARD WHITE

SINCE Rudyard Kipling, in his poem 'The Vineyard,' taunted the United States on the debt settlement with England there have been other indications that he is nursing a nasty grouch on his farm down in Sussex. The honest citizens of our own country are not the only ones against whom he has launched his lyrical vituperation. Certain of his fellow countrymen recently bore the brunt of a similar outburst of the famous poet's temper.

Only a few weeks ago he snarled dolefully in verse at people who disturb peaceful Sussex for a day's holiday. He caviled at the merry trippers who came to steal a few hours of sunshine in the sleepy country where he resided so retiringly.

It was to see what I could learn about Kipling's apparently aggravated crossness that I recently paid a visit to his own stamping ground, Bateman's, near the little village of Burwash. If I am any the wiser for my visit, it is only because I talked to the lord of the manor at Bateman's. Kipling is inaccessible. For many years he has denied journalists the joy of asking him the plain questions.

However, I think I have found answers to some questions that Kipling's American admirers have been asking themselves since he jarred their sensibilities by putting politics into poetry.

But before considering Mr. Kipling at home in the country, where he has been a poet-farmer for many years, it is best to recall that these little outbursts are not exactly the sign of a new Kipling complex.

A perusal of his works shows that he has trodden on the toes of nations and peoples rather indiscriminately in the past. It is said that this obstreperous spirit kept him from receiving the somewhat doubtful honor of the poet laureateship. The guardians of the British Empire seem to have doubted, somewhat justly perhaps, his willingness to stifle his muse if there were a question of diplomatic policy at stake.

And even before Mr. Kipling achieved his present pedestal of fame and honor he took pains to scotch the American scene. When he was very young and still laboring under the stigma of being a journalist, he said some rather uncomplimentary things about our voices, accent, manners, architecture and culture. His adventures in our country, during which he built a honeymoon retreat known as 'The Crow's Nest' in Vermont, lost a son, and went through a severe illness in New York, seem to have left a permanently bitter taste in his mouth. This bad taste, of course, was not washed away by some rather painful experiences with certain piratical American publishers.

From Charing Cross station in London it is a pleasant railroad journey of about an hour and a half through the hop fields and orchards, rolling meadows and wooded hills, along a holly-hedged right of way to the Kipling country.

When I landed at the town of Etchingham it was dark and dreary and I was glad to find a bus of well-known make to take me to Burwash, three miles away. A country woman was at the wheel. From this good lady I learned that there were three inns with inviting names at Burwash. As we drove along I pondered whether to stop at the Bell Inn, the Rose and Crown or the Bear Inn. Circumstances beyond my control, however, were to settle the question of Bell, Rose or Bear.

By the time I reached Burwash I had decided to try the Bell Inn, which is mentioned in Kipling's story of 'Hal o' the Draft' in *Puck of Pook's Hill*. Here I had to beat on the door of the historic old hostelry for some time before a maid finally peered out and informed me that the inn was 'full up.'

STUMBLING along the pitch-dark village street I found the small alley that led to the Rose and Crown. There I caught only a glimpse of the cozy interior and of a blazing log fire, for it also had no room for wayfarers that night. I was summarily turned away to consider my last chance, the Bear.

No place appears more self-sufficient or inhospitable than a country village on a cold, dark night. My spirits sank as I prowled along the path past the few lighted windows in search of the sign of the Bear. At last I came to that good inn, where a fire was soon blazing and supper started.

All seemed quiet and peaceful at the sign of the Bear until six o'clock, when a great clamor arose in a room adjoining the one where I was having a sort of high tea or (*Continued on page 26*)

Illustrated by RUTH THURBER

NOT long ago one of these always-with-us 'experts' announced that the Average Family of Moderate Means spends forty per cent of its income for food. And I added to that statement the grain of salt so necessary for all food flavor: That woman does not know her groceries!

They are old friends of ours, that Average Family of Moderate Means. True, we do not know their exact income. That's another of the things that even your closest friend doesn't tell you! We may discuss many other personal subjects with the unembarrassed freedom that the advertising columns urge, but only in the back pages of popular magazines and in midwestern 'realism' do we find those frank conversations. Besides, except around income tax time, or when someone is trying to collect money, the people who tell their incomes in an offhand way are apt to be boasting. Many of us take out our Delusions of Grandeur that way, when we know there is not a person present who works for the same company, and could check up on us.

If someone would only tell us the exact income of that Average Family we might settle the whole affair with a slide rule, as experts can settle the household affairs of the world! Surely 'moderate income' does not mean the really poor, who are now the Vanishing Americans. 'Kept within reasonable limits,' our dictionary aptly puts it. The family that lives comfortably but with care, we would say.

I spent some time trying to find out what a number of families in the same city, same section, same outward circumstances, spent for food, and it would take a certified accountant to find the 'average' family of the group.

The first family on my list did not surprise me, for I already knew about how they lived. A nice young coupl two small sons, and a part-time servan She keeps her food bill, including mill at forty-five dollars a month. Tha means, with healthy appetites to co sider, careful buying and not too man fancy desserts; good, substantial foo and plenty of it, but little entertainin except the informal kind. You can have six-course dinners when you allo fifteen cents a person for that mea A very reasonable food bill, I though and below twenty per cent of the income. Surely few did better.

Woman does not know her groceries.

The next family again contained tw children, and a cook. They do not kee expense accounts, and she could no give an exact figure. Her grocery bil which she charged, ran about fort dollars a month, but did not includ green vegetables, meat, milk, chicken or eggs. She seemed surprised that any one tried to proportion a food bil People must eat, and she simply go what they needed. They never ha elaborate meals, and she did not se how their bills could be reduced.

It really is fun, looking over th back fence and seeing how people live Mrs. A, with three adults and one chil in the family, and a cook when sh can keep one (which is seldom) spend about $125 a month for food. To much, when the rest of their living i little above the forty-five-dollar-a month family. But Mrs. Lynn, wh has a most attractive home—on th outside—spends (Continued on page 23

The Comedy of Cross-Purposes

A Tale of the Church, the School and the Stage

By CHARLES D. CAMERON

ON ONE corner of a triangle of streets I met none other than the Reverend Mather Cotton, eminent in the ministry and the magazines. His fine gray eyes were somewhat weary with a day of research in the public library, so he was listening rather absently to a serious-faced young man, whose theme was the Sunday school.

'Thank you for calling this to my attention,' he said, finally, the formula he used for all tiresome people. He was bowing the young man away. At the same moment he caught a glimpse of me, and came on eagerly, knowing he would find a listener rather than one to whom he must listen.

'Our youthful superintendent of the Bible school,' he remarked, 'is concerned about some of the new lesson quarterlies. He complains that they are worldly, unspiritual. I shall have to try to take him aside and make it clear that we must train the mind first of all, that we must know the facts of the universe.

'He's a good man and a good superintendent. He seems to have some kind of psychic magnetism which draws the children to him. An adaptable temperament, you understand. He talks to them about the drawing power of love. You can see he has had no psychological training.

I DID not have time to tell him that the quarterlies of which he complained were my own choice. For I could see that the old quarterlies were of an antiquated type. They were merely religious.'

Into the fine gray eyes flashed some of the light of those who see their mission in life, the same light that glowed in the wintry cabins of New England among Mr. Cotton's ancestors.

'The Sunday school, or the Bible school, should be a school indeed. Indeed, what else should the Church be? The mission of the Church is to teach, like the Great Teacher. We cannot be surprised at sin when we see the ignorance of the world. I discovered a child of thirteen in our Sunday school who knew nothing about the discovery of the tomb of King Tut-ankh-amen. Even her teacher did not seem to realize the importance to archeology of that excavation.

'Education is a long way from the complete accomplishment of its aims. But the Church is eternally young, and can take up the labor of teaching and training with new vigor each year. I wish you would come to our little meetinghouse and see what we are doing. We have an adult Bible class of one hundred studying the History of American Diplomacy. Our evening worship consists partly of a question box on current events. The work of education is a heavy one, but you can see, everywhere, that the churches and the interdenominational church federations are really attacking public questions of every sort, and doing all they can for enlightenment. I wish our young superintendent did not emphasize mere religion.'

WITH the Church teaching politics and the School going in for Drama, and the Stage emphasizing religion—each institution trying to do the work of another—there ensues a condition which this article describes.

More of the same kind of conversation, as learned as an encyclopedia and as worldly as a fish market, was furnished by the Reverend Mr. Cotton. We separated, he with his weary eyes somewhat refreshed by that far vision of an enlightened globe of educated inhabitants; I wandering aimlessly.

Aimlessness ended at the next corner, for here I ran into Dr. Froebel Mann, head of a school system, and teacher of teachers.

'YOU should have been with me earlier,' I said. 'I have heard such a warm eulogy of education. It was something which would have delighted any educator, though perhaps I did not quite appreciate it——'

'Education seldom is appreciated by the layman,' replied Dr. Mann. He spoke more formally at first, less ritualistically as he proceeded. 'The ordinary man hardly realizes what education has come to be in our day. They still pull the old bunk about the three R's. They seem to think education is mere instruction. You can get mere instruction out of an encyclopedia, out of a newspaper, out of a question box in a public-events class in a church!

'We intend, on the other hand, to make the schools a real preparation for life. This is the inspiration of the modern "project" method in education. We project life—throw life before the student, so that he meets situations in his school world which are like those he would meet in the actual world—only in miniature. But we are now entering upon a grander era in education, based on another instrumentality, the Drama.'

'Yes,' I remarked, 'I have often been struck at the number of school children attending performances——'

'I am not referring only to the Drama as presented in the theaters,' Dr. Mann said, with a magisterial interruption. 'We make use of the theater, of course. But we find, from the kindergarten age onward, that there is a powerful appeal to the learner in the Drama. Pageants and games, representations, impersonations, reaching from the very beginning to the end of educational life! This would be an ideal of true education.

YOU cannot help noticing the dramatic activity of every school, every university. Really, one of these days some lively manager may take one of our sophomore classes and book 'em through the coast on big time. The playing of actual dramas by students is an expression of mental activity. It bears the same relation to mental health and alertness that athletics bear to physical activity. Education is wonderful, indeed. It deserves eulogy, you can't put it on too thick, since we brought the Drama to our aid, the pageant, the dialog, with the motion picture camera as much a part of school furnishing as the dictionary.'

Dr. Mann turned away, having uttered his own eulogy of education, without asking what previous commendation I had heard, or from whom I had heard it. I went further, quite determined, after this brilliant indorsement of the Drama, to spend the next few hours in a Temple of Drama. And as I went on my journey to the next corner, one of the High Priests of that Temple, Garrick David, of Garrick David, Incorporated, came toward me with his stately Edwin Booth stride.

'Your eloquent press agents,' I began, 'should have been with me a moment ago. They (*Continued on page 27*)

WAR *Feeds the* Money Trust

Our Big Conflict *Means* More Profits *for the* Finance Oligarchy *Than* Twenty Years *of* Peace

By HENRY LAKET

Cartoon by W. W. CLARKE

THERE is no connection between the actual cost of public improvements such as roads, schools, drainage, water supply, street paving or municipal buildings, and the actual *cost* of the *money* which is borrowed through issues of bonds to cover these public works. Bonds issued by the national Government to pay war expenditures likewise give no indication of the cost of the funds so secured. The profitableness of war to the money lenders reaches stupendous totals not at all represented by the mere face value of the bonds—these show *only* the amount of cash *received* by the Government, and not the amount *paid* or to be paid by the Government—that is to say, by the people.

FOR a simple arithmetical proof of this fact, which somehow goes unchronicled despite its profound significance, is evident when it is stated that while the present estimated national and local public indebtedness is approximately *thirty-two billion* dollars —the actual face of the bonds covering actual expenditures—the *REAL* public debt which accrues from the existing public bonds totals not less than *seventy-nine billions*. But the only published estimates that the average man or woman sees is that of the smaller sum named.

Lending money for peace-time pursuits, for public works and local, state and federal improvements, is hugely profitable, but after all, all the vast public works, roads, public buildings, paving, schools, levees, and all the diversified peace-time works which have been installed by and for the benefit of the people of this country in the last two decades, represent a bond face value of only about thirteen billion dollars. Large enough at that, almost anyone would say, but such expenditures escape criticism because they have been applied to serviceable and beautiful additions to our civilization.

But vast as is this sum spent in peaceful endeavors, and hugely profitable as it has been for those who lend, the maw of coördinated and organized international finance is not satisfied and it requires that the people furnish *more*. War loans provide the means for this; it is finance carried to the *nth* power, for people will spend in a few years of war double the amount of their requirements over a period of a score of years of peace.

Hence war loans feed the insatiable beast which rides the modern skies—the Fifth Horseman of the *Apocalypse*, so he might be termed. The last great war advanced the money powers of the world and gave them the vantage ground of an almost complete command over the human pawns which comprise the populations of the various nations. Organized finance has now attained a stage in its development which possesses world-wide coördination: a higher point than it has reached in the history of mankind, because of the universal means of communication and transport which have drawn together and centralized all basic trades. Competition in the international money trade has been eliminated, control is central. A universal money oligarchy exists: the great and little wars have each performed a share in intrenching this force, but the last great war was the capstone which was required to complete this citadel of power—the world now is theirs!

Taking the United States alone, the great war left in its wake a bonded national indebtedness of approximately twenty-four billion dollars, par value. But this 'par' does not in any way indicate the *actual* debt which the national Government owes. In spite of the fact that the 'face' of the debt at the close of the war has now been reduced to nineteen and one-half billion, nevertheless the United States Government—the people themselves, we!—actually has a sum equal to about forty-four billion *yet to pay!*

ONE war of this kind produces a highly accelerated increase in the forces of money. One big war produces more profits for the organized money interests of the world than twenty years of peace, measured by the last twenty years. But measured by the expenditures on peace-time projects in the last two centuries one big war—financed by orthodox methods which no voice is ever raised to question—equals in volume of loans and profits to the money powers two hundred years of peace and civilization!

The public debt of this country is based on what is called a 'low' interest rate; otherwise the figures stated above would be multiplied to murder dimensions, if already the total obli tion is not killing. European gove ments are mortgaged at a rate where they are indebted for seventy- billion dollars for every twenty bill borrowed.

Belgium—the nation that had sympathy and aid of the world twe years ago, ten years ago, eight ye ago, six years ago—was forced to m a loan of $100,000,000 last year which the international banks t hold the bonds in that sum will rece in return a total of about $523,150,0 Part of this represents the actual s given to Belgium for her needs (actually received $94,000,000, the agr amount), and the rest, $429,150,0 represents what? Human sympat Where is the world sympathy and w to aid, of ten years ago? This differe is profits and 'legitimate' charges, goes to the banks or the lenders. Th nations, like those individuals, w most need 'sympathy,' apparently pr to be the most profitable objects u which to endow 'charity' and 'help.

BUT, as Pollyanna would say, 'C should be glad to be a United State money doesn't cost us so much o here.' No, Pollyanna is right: United States Government could pr ably borrow $100,000,000 today four per cent for thirty years—and t would therefore amount to a to obligation of only $291,500,000, agai the cost to the Belgians of $5 750,000! And while this explains h much better off we are, as a nation a people, nevertheless does it obsc or excuse the fact that we have o selves already purchased about thir two billion of funds and have agr to pay therefor—on the installm plan, which is the stomach, backbo and brains of 'finance'—a sum equal about seventy-six billions?

Cato, that old Roman, was ask what he thought of usury. It is s that he made no other answer to t question than by asking the person w spoke to him what he thought murder. It was Cato, too, who brou about the destruction of Carthage, t Phoenician (Semitic) menace of t ancient world, by his insistent repeati in the senate and out of it, the cry n celebrated: *'Delenda est Carthag* 'Carthage must be destroyed!' In ti a similar cry will be raised in t modern world, but directed against t

nodern variation on the ancient Car-haginian oligarchy—the oligarchy of rganized world finance.

And before Carthage there was Babylon (Semitic, too) which fell, the ncient world arrayed against it. And fterward fell Venice—for no other eason than that, like those before it, t was the world center of usury. hakespeare well knew whereof he rote!

IT IS just this extraordinary burden f overhead charges in connection with oans which individuals, and small and arge businesses, corporations and in-ustries, government, local, state and ederal, are staggering under, and lindly striving against, wondering why rogress can never be made, or if chieved, why so slowly. When success s obtained against such odds one is d to the reflection that because of ne unconscionable burden of what ractically amounts to usury which nen still have the strength to shoulder, ne achievements of the human race eem even more remarkable than one as considered them to be. For they ave been accomplished under a handi-ap greater than any which Nature erself has ever imposed on any living eings.

Man's attainments, despite the normity of the extra and unnecessary ad fastened to his hand, foot and rain, give but a faint indication of hat he might accomplish; to what xtreme heights of mental and material apacity he might be able to rise if but eed from the need of dragging with m at every step, hindering his every ove, this well-nigh killing load.

To an unusual extent American cal and state governments are sub-itting themselves willingly, gladly, the effects of cumulative interest arges. When this is considered in its ue and most terrible aspect, and when iis discerned how apidly such arges pile up in enty or thirty ars—how swol-n become the ffers of those o control the urces of money, *cash*, and how rrespondingly minished and runken become te resources of te borrower—it ould be obvious tat the settle-nents made by te United States vth European btor nations ve leaned so far the side of rness toward or debtors that it is possible that our own people have been treated unfairly as a result. We have extended the time of payment over a period of sixty-two years, at an interest rate so 'low' that in that long term of years the amount of principal and interest amounts to a sum not doubling the original amount loaned.

Fully to grasp the significance of the justness and mercy of these terms to our late associates in the war, it is only necessary to refer to the loan made by the international banks in 1926 to Belgium, which, running for only thirty years, but on the lending terms customary with professional lenders, will call for a settlement at the rate of $5.36 for every $1.00 loaned to Belgium by the recent consortium of banks.

If this loan were to continue for sixty-two years the final total would shatter that nation—it would exceed the monstrous sum of $1,499,000,000! Whereas, for this same loan, on the terms used by the American Government in its debt settlements, Belgium would be indebted at the end of the sixty-two-year term for a total hardly reaching $200,000,000.

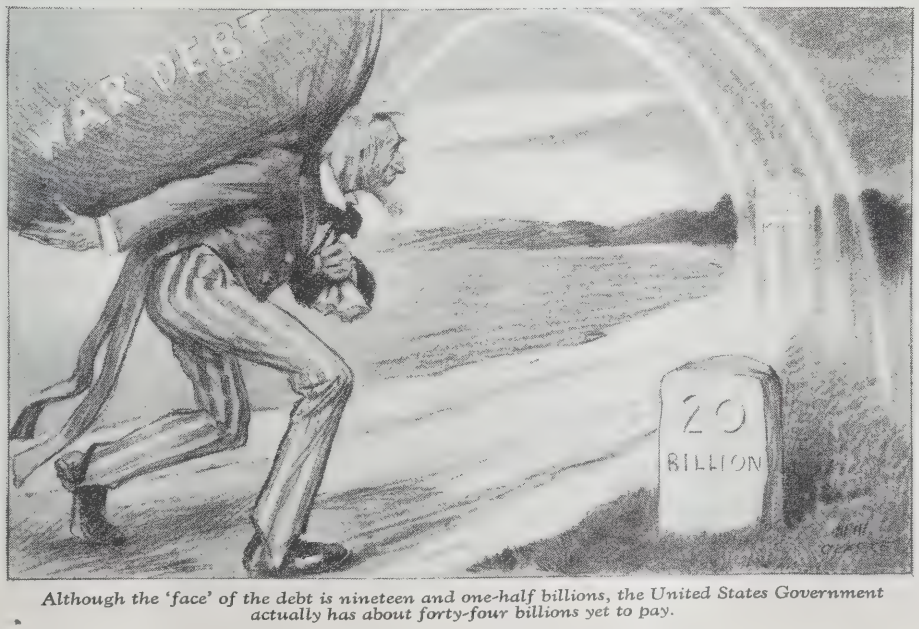
THAT is a profound illustration of finance as it really is and as it might be —of an ideal set by the American people in their dealings with debtors abroad, a not unattainable ideal if, with its lack of greed, it could be applied generally. And yet, even this fair settlement, at a figure and on terms so far below the customary terms granted by 'financiers,' produces a profit of nearly one hundred per cent! The ideal should be set still lower! And much lower! At least we know by this example that governmental loans *can* be handled, somehow, on a basis of a price of $200 for each $100 loaned: while the ordinary process (recently practised on Belgium) requires a price which approximates, for every $100 loaned, the sum of $1,499!

The question is—and it should be answered—Who gets this difference, and Why?

Other questions arise—How soon will usury conditions in America approximate the frightful nature of those in which Europe now agonizes? How soon will the American people be similarly imperiled? The genuine symptoms of the disease are already seen on every hand in this country. The hidden 'overhead' charge is mounting swiftly on top of the ordinary cost of government. Is it any wonder therefore that the problem of money and taxation is assuming a new and interesting shape?

MOREOVER, this Old Man of the Sea, this incubus which is fastening itself on the neck of American business, industry and government, is being felt now to some extent. The reality behind it is not discernible, however, to many. They feel certain effects, they feel a restraining something operating throughout business and government, but the great wrong of the thing behind it all is concealed by current subtle fallacies.

The true price of money, which makes it the highest-priced staple commodity in the world, escapes notice. Otherwise it is only fair to assume that the business brains of this nation would seek for another passage out, would try to devise some workable system whereby most if not all of the terrible and needless charges connected with borrowed money might be minimized. There is no such thing as a 'low' or a 'small' interest rate under present circumstances. This is the chief fallacy which must be eradicated, cleared away before a lucid understanding of the impending menace can be appreciated. The United States with the best intentions in the world toward its European debtors could find it possible, because of limitations of the system, to reduce the overhead charges, by ruthless cutting governed by a desire to help, to a point where the principal still *doubled* itself at the end of sixty-two years. And yet by the ordinary processes of liquidating loans, the interest rate of seven per cent, say, multiplies the principal *five* times in thirty years!



Although the 'face' of the debt is nineteen and one-half billions, the United States Government actually has about forty-four billions yet to pay.

(*Continued on page 22*)

Reading in Lent

Taking my stand, like J. M. Barrie's family solicitor, on the hearth rug of my library, my back to the fire, I discover that the books arrange themselves in two companies, and strangely enough, almost illustrating the parable, those around the walls to my right may be called the Christian regiment, and those around to the left the pagan. When I say Christian, I mean religious, though when I say pagan I do not mean precisely that.

If called on suddenly to say why this almost equal division, why this multitude of religious books, I should have to ask time to think. They are not the remnants of an inherited clerical library, none of my forbears were clergymen; these books are all my own purchases. I was not raised on religious literature. In my parents' home I do not now recall a single religious book, except the Family Bible, a volume with paneled covers stamped in gold, and illuminated pages for Births and Marriages and Deaths, with many chapters of introductory matter illustrated by fine old steel engravings of the Feast of Trumpets, the Israelites Crossing the Red Sea, and the Widow Casting her Mite into the Treasury, all so wonderful that I did not for many years penetrate as far as the sacred text. None of my aunts or uncles harbored religious literature, or indeed any other sort, in their houses. My grandmother, of course, was different. She had tracts. Many of them. When I visited her, she read them to me in the gloaming. The sad sky homesick for departed day, the sad boy homesick for familiar streets and faces, and the sweetly solemn voice of my grandmother —and the tract! I trust I am not indifferent to the spiritual welfare of any child, but nothing shall drive me to read him tracts in the darkening of day. There was one about the Second Coming. The world woke up one morning and found strange vacancies everywhere; all the religious folk—of certain primitive sects—had disappeared in the night: 'one shall be taken and the other left.' Dear grandmother sighed, and I knew that it was my father she was thinking about —he would be 'left.' Well, they are both gone behind the veil, and I think I could now read that tract in the gloaming without homesickness. We gradually learn to be at home in the universe.

Those volumes reaching from floor to ceiling and halfway round the room —some may trace them to my grandmother's influence, and I would not grudge her that; but then there would be the equally numerous pagan side to be accounted for, and there were no conscious pagans in our family. I sit in the midst of this hollow square, ranked eight deep—not books, but men—from the first century, a few even earlier, until yesterday, and *I know why they are there.* Poor gropers and they who have gained the hilltop, apostles and apostates, saints and sectaries, prophets and philosophers, mystics and archeologists and critics—

They are there because they have formulated the profoundest problems, prosecuted the farthest researches and have prodded the ribs of Reali itself for an answer. They know a wrestle with my deepest questions, a their thirst for light by the ways experience, reason and holiness unquenchable. Religion is the all-i clusive science.

IF THIS is true, why the left half my hollow square of books? It is t fruit of this other sun. I see now, by a flash, how grandmother wou have viewed it: this army at the left arrayed against this army at the righ No, it is its offspring. The tree is green and cool and lovely and the s all fire, but without the sun, no tre So these. I look again critically alo the shelves, and note the newer book is the pagan regiment outdoing t other? No, I see my regiment of t right permeating all the others, when the sun turns north the wint wanes. True it is that patches of sno in some secluded spot defy t April sun, but even in f northern climes the issue certain.

One day I started at Fort second Street and walked Brentano's, where presently the round of departments came to one marked 'Religious It illustrated exactly what I not mean by religion here. saw books on astrology, tele athy, suggestion, thoug power and the variations the receive in different cults, all which have their place and us but they are not religion. The do not describe it nor accou for it. The *War Cry* of th Salvation Army is a far bett treatise for the student religion than are the classes books I have indicated. The place and value are given fa and scholarly consideration i Gaius Glen (Continued on page 2

The Stagnation Possible in Prosperity

IT WOULD not be at all surprising if the world were to discover that it is on the brink of a new experience, or at least a new form of an old experience. To put it into words just as one sees it is not particularly easy, but it may be attempted after this manner: the world shows signs of growing tired of a certain kind of prosperity, just as it grew tired of a certain kind of poverty. There are signs that the zest of mere buying and selling, making and having and owning, the mere zest of business for business' sake, is suffering a decline.

This is very hopeful, most of all for that class who will never discover what business is until they are confronted with its decline—not in volume or value—but in satisfaction.

Man has always suffered from the delusion that he lives in two worlds, and his perplexity has been increased by the further delusion that it is his work to pull both worlds together into one. He has failed to see that he lives in one world and that it is only he who is guilty of trying to divide them in two. He has only succeeded in dividing himself, and out of this have come all the seeming antagonisms, dualities, inconsistencies and irreconcilable opposites which we attribute to the world.

Leisure was a good thing to desire and have, but men once got it by establishing a system of slavery. Greek civilization, with all that is praised in it, was founded on a slave organization. It divided in two human society and human rights, consequently it was unnatural and had to go.

Leisure is a good thing today, but until now most of it has been bought at the cost of other people's leisure. Across the sea we incline to admire the leisurely methods which make both ends of the week a holiday, business a necessary nuisance to be attended between Tuesday, say, and Friday; but it is bought at the cost of a dangerously neglected industrial situation. It divides the same race in two, in a most artificial division.

Here in America, the same mistake appears. Men seek 'culture.' They seek the graces of society and the arts. They are made to believe that without expert knowledge of the latest patter in certain circles, they are 'vulgar.' It is amazing the power which these 'circles' have, since their members are mostly do-nothing heirs and heiresses of men and women who knew how to work! But such is their power that they have driven a wedge between the world of work and the world of culture, a division artificial in the extreme. And mischievous, too, because if ever the world of art is to be established, it must be upon the same and durable qualities of the working world, and if ever the working world is to be established it must be by the inclusion of the finer elements of life. Art without life becomes an insanity, and work without the art of fine social justice becomes an oppression. Division, therefore, does not help; it only deepens the wrong. It is the formula of unity that we want.

Sometimes a country that is filled with money and goods and people becomes stagnant. And the wise men do not know why. They allege many causes, but no one feels that the right one has been hit upon. One thing they do not say is that sometimes the people simply grow tired of merely being busy and prosperous, for even business and prosperity lose their savor if they are nothing more than what we usually mean by these terms. The economist has never taken into account the possibility of people growing tired of mere business and mere prosperity. And the economist never will take it into account until his inquiry is broadened. The division of science into departments has unquestionably increased knowledge, but it is the reunion and mixing of the departments that increase wisdom. Permanent division would be as dangerous here as elsewhere.

MERE making and selling, buying and having, does not long satisfy the growing human nature. These operations must gain larger meanings and relations, or they soon grow stale. Then we have the spectacle of a country filled with goods and money, and yet become stagnant. It puzzles the economists. The phenomenon of people simply growing tired of being merely busy and merely prosperous could only have been produced by immense business and unparalleled prosperity. It is a new pressure upon society to find new and deeper meanings to justify its activity, and more compelling goals than we now have. Selfishness is the least sustaining motive in the world, the earliest to wear out.

The phenomenon of stagnation amid plenty has been growing for a generation, the difference in the more recent phases of the ailment being that stagnation now occurs without producing dire physical need. We are learning that the game of business will not play itself, that the players of business will not keep playing when their interest flags, that it seems to be a law that interest flags in proportion to the lowness of the purposes involved. Selfishness is the least sustaining interest in the world, the least of the sources of wise action, the earliest to wear out. Men have thought otherwise about selfishness, but this is the true account of it. As a motive power in continuous effort and increasingly refined effort, it fails miserably.

Faced with this experience, men of the far past have said, 'Away with the material interest in life altogether. Let us fast in caves until life be past.' Leaders of the present are saying: 'Regard business and labor as necessary evils, but *escape* from them into art or poetry or society or something else—get as far away from it as often as you can.' Are either of these wise?

OF THE DEARBORN INDEPENDENT

The Trial of Aaron Sapiro

THE DEARBORN INDEPENDENT will carry a week-to-week story of the trial of the libel suit brought by Aaron Sapiro against The Dearborn Publishing Company, publishers of THE DEARBORN INDEPENDENT, for $1,000,000 damages. Trial of the suit has begun before a jury in the United States District Court at Detroit.

Mr. Sapiro has been identified since 1917 with the business of developing, organizing and directing activities of coöperative associations for the marketing of farm products on what is generally known as the Sapiro Plan.

His suit is the result of criticisms of the Sapiro Plan made in a series of articles appearing in THE DEARBORN INDEPENDENT. The first was published in the issue of April 12, 1924, at which time, and for a number of years previous thereto, the Sapiro Plan had been in operation and had received such wide publicity as to become a subject of national interest.

The articles continued at intervals over a period of a year, the last one appearing in THE DEARBORN INDEPENDENT issue of April 11, 1925. They covered the operation and effect of the Sapiro Plan in a wide variety of agricultural pursuits, for at that time the Plan was so generally promoted that it was being used in almost every section of the country.

Under the Sapiro Plan of coöperative marketing organization, farmers or growers, in whatever locality an association was formed, signed contracts binding themselves to deliver their entire crop output to the association over a fixed period of years, the association to sell the products, paying the farmer after deducting all operating and selling expense. It was claimed for the Plan that, through this form of coöperative marketing, prices could be better controlled and that the producer would receive greater return for his products.

Investigation of the Sapiro Plan by THE DEARBORN INDEPENDENT showed just the reverse. With few exceptions the investigation disclosed that the Sapiro Plan of coöperative marketing resulted disastrously for the producers.

Following publication of these stories, Mr. Sapiro in 1925 filed his suit for libel.

'Religious Prejudice'

THERE is a great deal said in this country about 'religious prejudice.' It would serve to clarify our thought in the matter if we coined a more accurately descriptive term. A prejudice is not necessarily evil. Most of us have a prejudice in favor of our own families or states or nations. Most of our attitudes of mind are the result of the slant which race, religion and social status have been building up in us for generations. Few of us argue every case on the facts—we have a whole series of practical predetermined judgments (or prejudices) to serve in most instances. We are prejudiced in favor of law and order—most of us; we are prejudiced in favor of supporting the Government; we are prejudiced in favor of liberty. Yet it is entirely possible for special pleaders to show cause why these attitudes should be modified in special instances, and sometimes the weight of the facts and the pleading have the effect of modifying even a right prejudice. Most of men's prejudices are in the right direction; 'as the twig is bent the tree's inclined,' and the general inclination is toward the Pole Star of truth.

A prejudice that is religious is, first of all, a prejudice in favor of religion, and more particularly the religion which the person concerned knows best or has found useful to him. This is a form of religious prejudice which all religious persons possess, and none can gainsay it. It is the kind of religious prejudice which made possible religious freedom—and who can gainsay religious freedom?

But we have given a good name to a bad temper. It is desirable that all citizens be prejudiced in favor of all religion in general, and of some personal form or phase of it in particular. It argues the full-roundedness, or at least the possibility of full-roundedness, in human experience and character. It is desirable, also, because it saves the mind from the very evil which we think we are describing when we say 'religious prejudice.' That is, it prevents bigotry. The Founder of the Christian religion may be said to have had a prejudice in favor of religion, but bigotry He attributed to Satan. The term 'bigot' is of doubtful origin. The dictionaries define it first as hypocrisy. The bigot is certainly a hypocrite, especially the religious bigot, because he pretends to be the defender of something in which he has no part or lot. It is the genius of religion to broaden men, not to narrow them. Religion destroys selfishness by begetting a wider human inclusiveness; it destroys mundane provincialism by opening up the infinite reaches of the invisible; it destroys the narrowing influence of time by enlarging the mind with the conception of eternity. Any way you look at it, the genius of religion is to broaden, and the man who has not been broadened has no license to appoint himself as the exponent or defender of religion. This is the evidence that bigotry is hypocrisy—the bigot is a hypocrite in pretending to be intensely interested and closely associated with matters he has not even touched. Let us, therefore, rename him and give him his right label.

This, of course, will not satisfy the person who believes that religion is sometimes the cloak of an

ambitious political and worldly program. In such an event, it is the religion that becomes the hypocrite, pretending to be one thing and being another. And if the matter be deeply enough searched it will probably be found that the fault does not inhere in the religion at all, but in ecclesiasticism, which is quite a different thing.

Ontario Tries Again

ONTARIO is about to tackle the liquor problem from another angle. It simply means that a new prohibition experiment is being made. This fact is overlooked when the 'wets' and the 'drys' get fighting among themselves. The actual political changes in Canada which have resulted from public wrestling with the liquor problem have been variously described as 'wet' or 'dry' victories, but they could be more accurately defined as stages in the public study of the problem with a view to determining the best mode of handling it. Every successive change in Canada has amply demonstrated an unshakable public conviction that a liquor problem exists which calls for wide public action. Certain steps have been taken from which few believe there will be any retreat. The status of the saloon, for example, is fixed; it is permanently eliminated. Not even the most ardent 'wet' will argue that point. And with this determined, the only possible movement is toward some form of prohibition. It may be a partial form, but it is a form of prohibition.

It is overlooked that in this country the same period of experimentation preceded the Constitutional Amendment which made prohibition a fact. We had state and county option and a whole network of regulatory laws, all of which extended over several generations and engaged much public thought. In fact, it was the never-ending compulsion of public attention to liquor and its control that eventually led the American people to conclude that the only satisfactory way to deal with the problem was to abolish it at the source. To be sure, this action brought with it another problem, but one which is more clearly defined and more directly dealt with. There are those who wish we were back in the old period of experimentation. Others are quite satisfied for us to remain as we are. With the Constitution as it is, we cannot well do otherwise. But it will be extremely interesting to observe Ontario's new experiment, to see whether it works any better than the one which preceded it.

First Aids to Crime

NO LAW-ABIDING private citizen needs a machine gun. Neither does he need a blackjack, a sawed-off shotgun, a revolver silencer, a sword cane, brass knuckles, burglar tools or that newly developed small arm, justly popular in underworld circles, which projects a deadly stream of poison gas or liquid. And yet he can buy these things—in most states—with as little trouble as he can a package of cigarets. In fact, legal restrictions governing the sale of tobacco in many sections *are more stringent than those governing the sale of weapons.*

In the hope of obtaining standard regulations for the sale of weapons, the National Crime Commisson has sent to all state legislatures now in session a model firearms bill. It prohibits the sale of some weapons, useless to anyone not engaged in a serious career of violence, and restricts the sale of others to such persons as might have legitimate use for them. Manufacturers and dealers in revolvers would be licensed, and all purchasers would have to obtain permits. Possession of a revolver without a permit would lead to severe penalty. So, too, would the commission of a felony while armed with a dangerous weapon. Progressive sentences are provided in the bill for each successive felony until, on fourth conviction, the criminal could be given a life sentence. This provision is borrowed from the Baumes Law in New York, with the exception that whereas under the Baumes Law the life sentence is mandatory for fourth conviction, under the model bill it is discretionary with the judge.

The bill was drafted by a committee which included representatives of the Army, the police, prosecuting attorneys, firearms manufacturers and revolver and rifle associations. All its features may not be adaptable to all states, but in the main it provides necessary safeguards. The organized criminals of the country are utilizing the most effective methods and the most efficient weapons yet devised in their war on Society. Against them Society has a porous barrier of antiquated laws and ponderous customs. The various state legislatures should act at once on the commission's bill. Postponing action until a later session would be foolish. Crime, like time and tide, waits for no legislature.

Marines—Then the Bankers

BIT by bit the Nicaraguan situation becomes more apparent. Close on the heels of the landing of 1,200 additional United States Marines comes this cable dispatch from the tiny Central American republic:

> President Diaz and United States Minister Eberhardt have conferred relative to the terms of a $700,000 emergency loan submitted by a New York firm, but no decision as to the flotation of the loan has been made. President Diaz said Nicaragua is in an excellent position to seek a larger loan of from $12,000,000 to $20,000,000 once peace is established.

First the Marines, then the Bankers. *'Once peace is established'*—mountains of meaning in that phrase! Once 'peace'—meaning Diaz—is established, a new market will be opened for the floating of a $12,000;000 to $20,000,000 loan. Once 'peace' is established, profits will resume their march toward New York. And two thousand Marines are in Nicaragua to see that 'peace' *is* established.

Communique—The Bankers have landed and have the situation well in hand.

The True Story of Mary's Little Lamb

AMONG the many who heard the story of Mary and her little lamb as told by Mary herself, and who afterward wrote it for a magazine, was Mary Balch Briggs, formerly of Debham, Massachusetts, who from 1898 until her death in 1912 was a teacher at the Hampton Normal and Agricultural Institute, Hampton, Virginia. Miss Briggs edited a little paper called *Work at Home* and in it told of visiting with Mary and hearing the story of the lamb.

'. . . I had seen with my own eyes an equally remarkable personage, no less than Mary who had a little lamb. She was no empty dream. She ate dinner with an appetite that belongs to a veritable body; she shook hands heartily; she sat by my fireside; she told the story of her lamb; she even wrote with my own pen the original verses of the poem. The Lamb's Mary is now Mrs. Columbus Tyler of Somerville, a fine-looking, uprightly, young-hearted lady of eighty.'

Miss Briggs' story clears up the nature of the wrapping which was thrown over the lamb at school:

'Mary threw over it a little striped blanket of her mother's weaving which she wore to school instead of a shawl.'

Another figure, however, looms in the story—John Roulstone, who Mary always said was the first to hand her the poem, or rather the first twelve lines which dealt simply with the school incident. We know as much of John Roulstone's life from boyhood to death as we do of Mary's life, though John died in 1822 at the age of seventeen.

The question now is, Can it be shown that John Roulstone had any part in the making of the poem? To begin, we should never have had knowledge of John in this connection had not Mary always included him in her narrative. Had her story been a piece of fiction she might just as well have named anyone else, the teacher for example, or some of her own relatives. However, in the Mary Sawyer accounts of the incident there is no room for any name save that of John Roulstone.

Who was he? Mary says he was a young man fitting for college under the tutelage of his uncle, the Reverend Lemuel Capen, the minister at Sterling. These are facts. Mr. Capen was the minister at Sterling from 1815 to 1819; the pamphlets containing the sermon given at his ordination in 1815 and his own farewell address of 1819 are in evidence. There is also a sixteen-page tract entitled, 'Tribute of Affection to JOHN ROULSTONE, JR., a Member of the Freshman Class in Harvard University; who died February 20, 1822, Age 17, Boston; printed by John Cotton, Jr.'

The next day he rode across the fields on horseback to the little old schoolhouse.

Illustrated by GERALD VAN DER HEYDEN

This tribute was written by the Reverend Lemuel Capen, who says in the preface that he knew John from his early youth, and during the last five years of his life had almost the sole direction and oversight of his conduct and was 'constantly in a situation to discover all that could known by human inspection.'

The youth was well born, his fathe Captain John Roulstone, being member of the Ancient and Honorab Artillery Company of Boston. T captain's portrait hangs on the walls Faneuil Hall and his grave is in t Granary Burying Ground. Sent Sterling to be fitted for college, would be about twelve years ol Taking the 'five years' of the Reveren Lemuel Capen's account as determinir the time that John spent in Sterlir we may say that he lived under t direction of Mr. Capen from the ag of twelve to seventeen. Two or thr of these years would fall before M Capen's resignation in 1819. As Joh was born in 1805, he was thus a ye older than Mary. On the basis of the dates, Mary could not have been le than eleven years old when John, the age of twelv came to live wit Mr. Capen—that i if the 'five years' Mr. Capen's chr nology comprise a of John's residen in Sterling. It ma be noted here tha in Francis H. Sav yer's copy of th book containin Mary's story, o page 39, she ha written 'in 1817' a the date of the lam episode. It fits a the computation This would mak John twelve yea old, and Mar eleven.

There is then n manner of doub that there was John Roulstone and that he lived i Sterling.

What were his abilities or charac teristics by which we may judge of hi possible authorship of a children's poem Reverend Lemuel Capen, in his memo rial 'Tribute,' wrote:

Children were special objects of his at tention. He was equally their protector an guide. Instead of taking pains to irritat and vex them, as many young persons ar apt to do, he delighted in making ther happy; and devoted much of his leisure t their amusement and instruction. It wa peculiarly interesting, and sufficientl

There was a high stone wall to climb, and it was rather hard work to get her over. We got her on top, then clambered over to get her down. She seemed to understand what was expected, and waited quietly for us to take her off the wall.

proved the goodness of his heart, as it showed the confidence they reposed in him, to see a family of little ones running to get him, when he approached, and clinging round him with a kind of filial fondness. He was distinguished for a scrupulous regard for truth.

Mr. Capen goes on to describe the boy's 'assiduous attention to his studies, and his diligence in the improvement of his time . . . it is rather probable, that during the last year of his life, his close application to his books in some degree prepared the way for his fatal disorder, or at least served to accelerate its progress.'

Thus far we have the portrait of a lad who loved children and was devoted to his studies. To those who know the period, the latter fact will bring no doubt. It was a time when ambitious boys were brought up on literature and looked forward to scholastic preëminence. That has largely passed out of American life, but in the days of John Roulstone the principal outlet for intellectual eagerness was in the declamation of sonorous lines or the imitation of the poets. Perhaps no other period in our country saw more amateur poetry than the first fifty years of the 19th Century.

Did John Roulstone write? The nearest approach that can be made to an answer is again in the 'Tribute':

> Though not essential to the principal design of this narrative, still it may not be uninteresting to say something of the literary character of its subject, especially as he was no less distinguished in this than in other respects. The qualities of his mind, as well as those of his heart, were of a very high order. Accuracy and discrimination were prominent traits, which would have qualified him for close investigation and research; but his taste and inclination would probably have led him to cultivate classical learning, rather than the abstruse sciences. He possessed a lively fancy and a correct judgment. His moral purity seemed to have diffused itself over his whole character, and extended even to the formation of his literary taste. In elocution he greatly excelled. He not only acquired ascendancy over his own passions, but appears to have studied with much care and success those of mankind in general; and could describe them with a voice, an expression and a manner, which at once commanded admiration and encouraged hope.

The reader will be quite competent to form an opinion whether these traits of character and these attainments were such as to lead, in a verse-making age, to the writing of the first twelve lines of 'Mary Had a Little Lamb' by John Roulstone at, say, the age of twelve. One reader has already suggested that the diction of the Reverend Lemuel Capen led him to wonder if the boy had not benefited somewhat by the clergyman's own ability to versify. Mary's niece, who is still living, says she had never heard even the faintest suggestion that possibly Mr. Capen had helped in the making of the poem. A daughter-in-law of the Reverend Lemuel Capin, who is now resident at Dedham, Massa-

Climbing MOUNT BAKER, *Washingto*

By DOROTHY E. PILLEY

A remarkable feat was recently achieved when Mount Baker was climbed by the northeast face by a party of three mountaineers consisting of Miss Dorothy E. Pilley, Ladies' Alpine Club; I. A. Richards, Alpine Club; and Ben Thompson of the Mount Baker Forestry Patrol Service. This is the first time a woman has ever succeeded in making the ascent by this difficult route. Both Miss Pilley and Mr. Richards have had wide experience in climbing the Alps.

The very ease of the ordinary ascent tempts the climber to neglect precautions.

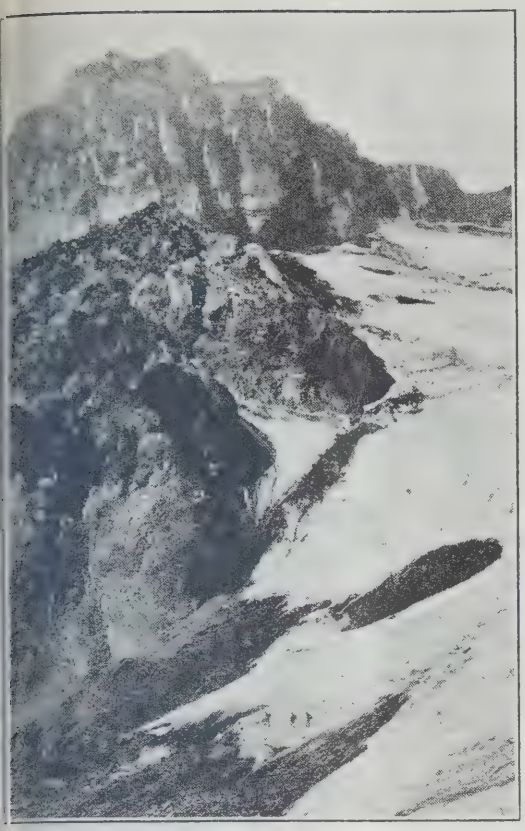
NORTHERNMOST of the giant volcanoes that dominate the Pacific Slope soars Mount Baker. From the Olympic peninsula or the islands of San Juan de Fuca, or even from the heights of Vancouver Island, one can often pick its silvery gleam, hanging like a dim presence in the sky, above the misty horizon. From this distance it seems to be quite cut away from the earth. I saw it once from the deck of the Port Angeles ferryboat. The immense white wisp was only just visible, cloud-like, but with a firmness of outline that no cloud possesses. I picked it out with peculiar pleasure. Only a few weeks before, fresh from a month's mountaineering amid the marvelously colored precipices of Glacier National Park, I had crowned a long-standing ambition by climbing Mount Baker, and by a route which had only once before been followed. So it was with more than ordinary interest that I looked up from the streaming waters and the white foam of our wake and caught sight of the mountain.

The contrast between Mount Baker and the Montana mountains had brought home to me again the wealth of mountaineering opportunity which America possesses. No more striking experience can be imagined than to pass, as I had done, almost direct from the spectacular cliffs of Going-to-the-Sun Mountain to the gentler snow-crowned summit of this monarch of the coastal range. Its shape definitely suggests the volcano, a heavier but not less soaring Fujiyama, the vastness of its glaciers very apparent at this distance. From the Olympic peninsula, or from the islands, it occupies the horizon in solitary majesty, for none of its surrounding mountains, not Shuksan nor the Three Sisters, fine though they are to climb and to see at close range, seem from afar more than foothills. So it must have appeared to Lieutenant Baker when, as Vancouver sailed through the straits of San Juan de Fuca, it first came distinctly into his vision. We can imagine the enthusiasm with which he called his commander's attention to it.

Not even Mont Blanc from the hills above Grenoble or Monte R[illegible] from the Cathedral of Milan, famous [illegible] these sights are among Europe[illegible] landscapes, have anything to bo[illegible] over Mount Baker when seen fr[illegible] Puget Sound. The same air of [illegible] tachment from the earth seems to [illegible] long to all three. Gazing at the lumin[illegible] crest of Mount Baker, clearer now, [illegible] the sea wind was sweeping away t[illegible] intervening mist and smoke, I found [illegible] easy to understand the feelings of [illegible] first conqueror, that pertinacious Br[illegible] ish mountaineer, Edmund T. Colm[illegible] of Victoria.

For two years his efforts were t[illegible] rewarded. Ascending from the Ska[illegible] side the hostility of the local India[illegible] proved too great an obstacle. Final[illegible] in 1868 he gained the coveted summ[illegible]

The first time a woman has ever succeeded in making the ascent.



lo experiences are more interesting or more full of beauty.

l· Clearwater Creek and Thunder and loosevelt glaciers. His route has only len repeated once in its upper section, l· a party of climbers who, being cught in a tremendous storm near the smmit, had to pass the night in a cve hewn in the ice.

The route usually followed nowacys must be well known to many nountaineers of the Northwest. One cmbs up from the little village of Glacier ·a Heliotrope ridge, and proceeds over giciers whose crevasses, although upon astupendous scale, offer no hardships. Valking sometimes along a flat-topped th-foot causeway of ice between cnyons whose vertical sides plunge cwnward for hundreds of feet, sometnes zigzagging between narrower fsures and sometimes making astoniingly easy progress up immense spes of innocent snow, the climber cmes to what is called the Saddle, ad the extensive summit plateau. The Saddle, or the slopes near it, was oce the scene of an accident as pathetic a any in the annals of mountaineering.

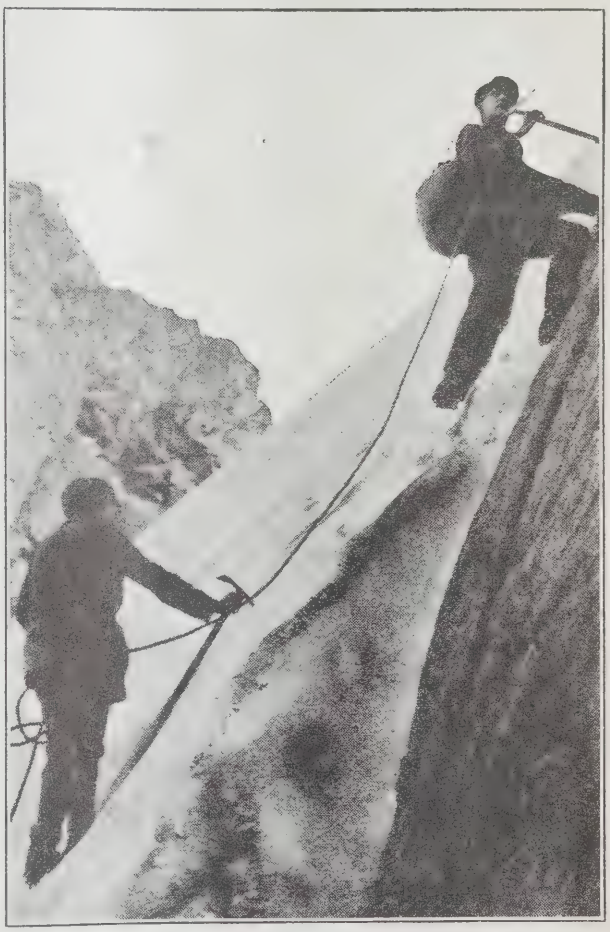
Two old-time prospectors were using te mountain as the easiest route to te Baker Lake region. In the days lfore trails were in existence it dubtless was a relatively easy though nt a safe way for ill-equipped men ufamiliar with the dangers of glacier tvel. What might only too well have ben expected happened. One of them boke through the surface of snow cvering a concealed crevasse and fell ino the engulfing darkness below. Ijured and trapped beyond any possibility of escape, he was yet able to speak to his companion above, to give him a last message to his wife and family and bid him make his solitary way back to safety.

Considering the number of unroped and uninitiated persons who have since disported themselves upon the glaciers of Mount Baker, it is surprising that more such fatalities have not resulted. Even an experienced mountaineer is not immune from these dangers as the death, through a similar accident, in 1913, of C. P. Bishop, president of the British Columbia Mountaineers, showed only too clearly. The very ease of the ordinary ascent tempts the climber to neglect the precautions which sad experiences have made universal in the Alps even upon the least difficult of glaciers. With these precautions to guide him, however, no hale person should hesitate to enjoy the exhilarating sport of mountain climbing. There are few experiences more interesting or more full of beauty, and finer ice scenery is not to be beheld in the world than on Mount Baker.

Our own ascent was made from the side of Austin Pass. Leaving Heather Meadows, where there is a convenient and delightfully situated hotel, one follows an easy trail and makes his way over several small glaciers to a point known as Kiser's Camp. The presence of firewood there insures a comfortable night, for from here the whole route of the tomorrow's climb lies plain to view.

Below this point a tortuously riven glacier fills the valley. Beyond, the open snow-slopes rise, broken only by the shadowy crisscross markings of crevasses, to the sharp edge of the summit plateau. They are divided by a long, low ridge that falls toward one, crowned by a point, Pumice Stone Pinnacle, which at this distance of several miles looks unimportant. It is marked at its foot by a hollow, bare space in the glacier which when approached proves to be a moderately live crater emitting whiffs of steam and vapor and is clotted with deposits of sulphur. Possibly before long parties will follow this ridge, thus making the crater a halfway stopping place where feet which have been feeling the chill of the snow may be warmed—to the detriment of their owner's boots.

Our own intention had been to follow this route, but on the way to the crater we came upon a line of faint tracks left we knew by climbers of the week before. This party had failed and we knew the reason. An impassable rift in the glacier stretching across the whole face of the mountain had barred further progress, it was reported. We knew that a similar failure might easily be our fortune if we followed them, but somehow on that perfect morning, with the swelling, rounded steps of the glacier beautifully dappled with blue shadow and sparkling in the early sunlight with myriad diamond lights, the lure of the snow was irresistible. Risking failure, therefore, we determined to explore the reputed impasse. Up we wound, halting only once where a little pool of water caught in a cleft of blue and gleaming ice invited us to lunch. After gaining a great height we (*Continued on page 29*)



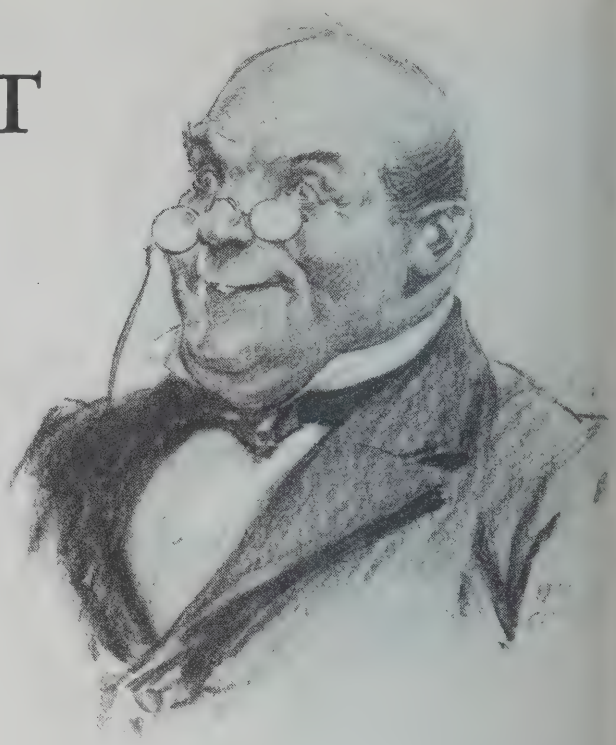
Making astonishingly easy progress up immense slopes of innocent snow.

The HAPPY OPTIMIST

By HUGH WALPOLE

Illustrated by W. W. CLARKE

Copyright, by HUGH WALPOLE



The most terrible optimist.

DURING thirty-seven troubled years I have learnt something about life. One of the most romantic incidents in that life—one from which I learnt a very wholesome lesson—I am now going to relate.

I have a certain reputation for helping people out of their difficulties, and sometimes complete strangers, by my advice.

There came to my office one day a thin, harassed-looking woman, with gray hair and pince-nez, soft, kindly eyes, and clothes not of the smartest. She introduced herself as Mrs. Lane, and asked whether I could give her ten minutes of my time. 'I have heard of you from a friend of mine,' she said, 'a Mrs. Bumpus, whom you helped at a rather difficult moment in her family history. I was telling her my little trouble the other night, and she said that you were just the person to help me out of it.'

'I will certainly do what I can,' I said. 'What's the matter?'

'I do hope it won't seem to you too foolish,' she went on rather nervously. 'In a way, nothing's the matter, and in a way everything is. In any case, I must have some advice. I'm a woman of thirty-eight, and I've been married for fifteen years. I am married to one of the kindest, most amiable, most faithful of human beings, and that is saying a good deal nowadays, men being what they are. You will think it very curious, therefore, that, after saying this, it is nevertheless about my husband that I have come to speak to you.'

'Perhaps he's too kind and tender,' I said. 'I know that that can be monotonous. You want me to help him to a little ill temper?'

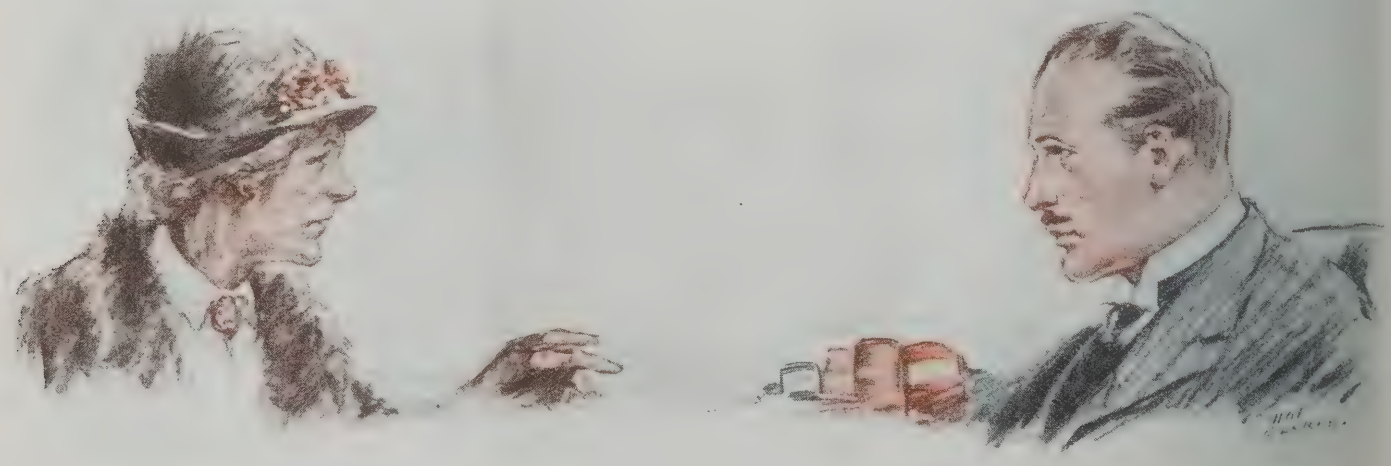
'How wonderful you are!' she cried. 'You're nearly right and at once, and I'm so glad, because now I needn't explain all sorts of things which would take a long time and serve no purpose. It isn't that I want any ill temper, but it's nearly that. The fact of the matter is that my husband has grown through all these years into the most terrible optimist. He is so persistently cheerful, looks so deliberately upon the bright side of things, refuses so entirely to be upset by anything, even toothache, that the children and I and an aunt who lives with us, to our horror, are discovering that although we all love Charlie very much, we are beginning to avoid his company, to go out of the house when he comes into it, and to stay away with friends whenever a chance offers itself. What becomes of marriage, Mr. Johnson,' she asked me solemnly, 'when the wife avoids her husband and the children shrink from their father?'

'Yes,' I answered, with becoming gravity, 'that is certainly the beginning of the end.'

'But it's not only that,' went on Mrs. Lane. 'His men friends and my friends, everyone who comes to the house, in fact, is beginning to feel it just as we do. He doesn't notice anything himself, and just gets happier and happier. I don't know if you're a married man, Mr. Johnson.'

'No, I'm not,' I answered, and added, 'unhappily.'

'If you were,' said Mrs. Lane 'you would understand how terrible it is to know that, however irritating things are, your husbnad will always feel that they're for the best; that however gloomy you yourself may be when you wake up in the morning you will inevitably hear your husband singing in his bath; however bad the weather may be, you will certainly be told that it's going to be fine tomorrow or was beautifully sunny yesterday however many mistakes our wretched



She introduced herself as Mrs. Lane, and asked whether I could give her ten minutes of my time.

overnment makes, you will be assured hat any other government would make rrors far worse. I'm sure this seems ludirous to you, and yet this simple thing s breaking up our home life and making ıe almost hate my husband, and yet I ove him, how deeply no one can know.'

Mrs. Lane appeared to be greatly istressed.

'AND what do you want me to do?' asked.

'I thought—I don't know—of course , seems silly, but I wondered whether erhaps, as you're so clever, you could ink of some way to make him a little ss cheerful, not so invariably optiistic. I've tried one or two ways ıyself, but they've all failed. I asked is Aunt Bessie to come and stay with s—all his side of the family are agreed ıat she is one of the most tiresome old omen ever known—but the more resome she is, the more cheerful he ecomes. Then I developed nervous eadaches, because I was told that there as nothing more irritating to a ıan; but all he said was that I'd be etter soon, and then I'd be so ad that I was better that it would ally be worth while having had ıe headaches. Then I happened overhear him say to a friend ıat the one article of diet he ouldn't bear was lobster, and I ave him lobster four nights runng, and all he said on the fourth ght was that it showed what habit ould do, because he'd always ncied that he didn't like lobster, ıt now that he'd had it once or vice he was becoming really very nd of it. This must all seem, Mr. ohnson, perfectly fantastic to any rdinary person, but I assure you ıat I just long for an outburst of mper, some expression of disntent. I've seen that his bath is kewarm, that his collars come ck frayed from the wash, that is studs are never where he expects find them, that his bootlaces rst just when he's in a hurry; ve asked for twice as much housekeping money as I ought to have; ve put the children in his way st when he wants to take a nap; even had one of those little meranian dogs in the house beuse I knew he didn't like them, d, indeed, I hate them myself—to no effect. Unless something n be done, I shall have to leave m. It's becoming a perfect obssion with me, and I don't know what olish or mad thing I may do if you n't help me. He'll be round here in moment to fetch me. I told him to ll for me here because I thought you ght to see him.'

'This is a very difficult case, Mrs. ne,' I said, shaking my head. 'After , if I were to succeed in spoiling his mper, you mightn't thank me afterwards, you know. You might look back with longing to these earlier happy days.'

'Never, never, never!' said Mrs. Lane, with the utmost determination. 'Anything would be better than this. And he never can be very bad-tempered. He hasn't got the build or anything. Just a little temper about once a month would make all the difference to me.'

At that moment a small boy announced 'Mr. Charles Lane to see you, sir,' and there came into the room a large, jolly-looking man with a red face, a slight tendency to corpulence, pince-nez set a little crookedly on his nose, and a cheery smile on his face that instantly, in the words of one of our most favourite novelists, 'lit up the dingy office as with rays of sunshine.'

'This is my husband, Mr. Johnson,' said Mrs. Lane rather nervously. 'Charlie, this is Mr. Seymour Johnson, a friend of Mrs. Bumpus, with whom we were dining the other night.'

'Why, I'm delighted to meet you, Mr. Johnson,' said Mr. Lane, coming forward, a large hand outstretched. 'What a charming place you have here! I've just looked in to fetch my wife for a little shopping that we're going to do together. Well, little woman, how are you? Ready to come along?'

'Yes, Charles,' said Mrs. Lane, getting up with a weary air.

'That's right. Splendid morning for shopping. Bit overcast outside. Very thing to make you like to be under cover. Wonderful weather we've been having, Mr. Johnson.'

'Well, I don't know,' I said. 'It's rained pretty steadily the last few days.'

'Oh, we must have some rain sometimes,' said Lane. 'Nothing so bad as a drought, you know. Let's have rain now, and we'll have fine holiday weather later on. What do you think of the general situation?'

'Seems to me,' I said, 'about as bad as anything could well be. Strikes every week, all our trade going to foreign countries, income tax going up every minute—no, I must say things are pretty serious.'

'Do you think so?' said Lane. 'I wonder at that. After all, what can you expect after a war like this last one? Everything's improving, it seems to me. I think it's marvelous that we've come through these years since the Armistice with as little trouble as we have. You wait another six months and you see how our trade will run ahead. Things couldn't be better, in my opinion, and I'm not generally an optimist by any means, am I, old woman?' he asked, turning round to his wife.

Miss Allan was a strong, rather stern-featured woman.

'Well, Charlie,' she said nervously 'I couldn't exactly call you a pessimist.'

At that he roared with laughter, slapping his chest and making the maps on the wall shake the dust off their glaze as though they also agreed with him.

'I suppose I'm not exactly a pessimist. Why should I be? I've enjoyed splendid health, Mr. Johnson, all my days. I've been a lucky man, too, with the best wife in the world and three of the most ripping little nippers you ever saw in your life. I attribute my health,' he said, coming close to me and looking at me with intense seriousness, 'to having a cold bath every day of the year, winter and summer, quarter of an hour's Muller's exercises before the open window, and eating a good hearty breakfast. Now, breakfast is the meal to build the day on. You have a good breakfast, and nothing can go much wrong.'

To myself, who find a small cup of tea and a thin piece of bread-and-butter as much as I can manage in the early morning, there was something truly cannibalistic about Lane's morning diet. It is quite true that I felt more deeply depressed during his five-minutes' conversation than for many days past, and that I wished him earnestly to go.

I did see Mrs. Lane now as a real victim, and I said to her as she turned about to go: 'In that matter about which you were speaking to me just now, Mrs. Lane, I will see what can be done. I'll communicate with you further.'

'Thank you,' she said, and went out with her husband.

The Lanes have a jolly house in Maida Vale, and one beautiful afternoon I found myself sitting in their garden watching Lane, in his shirt-sleeves, bend over the little beds that ran beneath the old red brick walls, pulling out weeds and doing mysterious things with a trowel. He was certainly a fine figure of a man, I thought, as I watched his broad back and stout, strong legs, the absolute negation of ill-health, indecision, and any sort of nervous trouble. I'm never going to turn that back and those legs into the working apparatus of a pessimist, I said to myself. I am beaten at this game before I've begun it. He straightened himself and turned round, his broad, red face flushed with his exertions. 'By Jove, it is jolly,' he cried, 'this weeding! There's nothing like it for sheer fun. Why everybody doesn't spend all his time weeding, I can't think.'

'It's a good thing they don't,' I said rather irritably, 'or there'd be nothing ever planted.'

'Oh, do you think so?' he said, laughing. 'Planting's very jolly, too. Anything to do with the garden is splendid.'

I discovered that my earlier determination to force Lane into loss of temper as soon as possible would not be an ungrateful task on my part.

'I simply don't agree with you,' I said crossly. 'If you will forgive my saying so, I think you're talking nonsense.'

'I dare say I am,' he answered cheerfully. 'I do talk a great deal of nonsense. Don't you like gardens, then?'

'Oh, the gardens are all right,' I said.

'You mean the people in them are so tiresome?' he said. 'Well, I can't agree with you. I love my fellow humans. People are fascinating, I think. Nobody's dull if you really get to know him. Everyone's so much jollier than you would expect.'

'Oh, really, Lane,' I said, 'I haven't known you very long, and perhaps I've got no right to speak, but whom do you know? I could introduce you to one or two whose jolliness would be difficult even for you to find.'

'I dare say you're right,' he answered, 'but in my opinion the great thing is to see the best side of people. We all have a good side, you know, as well as a bad side, and if you only look at the good side—well, naturally you like people better. Then I'm not a clever fellow like you. I do admire men who write and that sort of thing. Now, tell me,' he said, looking at me cheerfully, his hands on his broad hips, 'how do you write? I mean, how do you begin, for instance? How do you ever think of all those things that they say to one another? How does a book start in your head?'

I groaned. This case was going to be very difficult.

'Look here, if you don't mind,' I said, 'we'll talk about all that another time.'

'Oh, I say,' he asked, with great anxiety, 'you're not feeling ill, are you? Is the sun too much for you? Let me move that chair into a shady corner.'

FOR Heaven's sake, leave me alone!' I burst out. 'Forgive me if I seem a little irritable.'

'Why, of course,' he said. 'I know what it is to feel irritable. I quite understand. You won't feel irritable long on a day like this. I tell you what,' he went on very seriously, 'when I'm feeling a bit off colour, I just go up to my bedroom, strip and do a few Muller exercises. Puts me in condition in no time. If you'd like to wave your arms a bit, you're quite welcome to the room upstairs.'

'Good Heavens, on a day like this!' I murmured

'Oh, well, perhaps it is a bit warm, bu there's nothing like a good sweat for making you see things cheerfully. Are you musical by any chance?' he added, after a moment's thought.

'I am a little,' I said weakly.

'Because I don't know if you like the flute. It's rather jolly sometimes to sit in a garden and to listen to somebody on the flute. Of course, I'm not very good. I'm really only learning, but there are two or three tunes I have pretty nearly got now and if you like to sit under that tree——'

'No, thanks,' I said, very crossly indeed. 'If you don't mind, I think I'll go to sleep for a bit.'

'Certainly,' he replied. 'You go to sleep for a half an hour and you'll wake up as jolly as anything. Do let me move that chair of yours into the shade. You won't mind my going on with my gardening, will you?'

IT WAS a strange thing that somehow the thought of that broad back and those stout legs exposed in earnest endeavor once again before me was more than I could endure. I was wondering what excuse I could make to escape, when Mrs. Lane appeared.

'Hullo, darling!' cried Lane. 'That's splendid! Come out and join us. We've been having a most delightful talk. Mr. Johnson's been telling me all about his writing. Most interesting. Now he thought he'd have a nap for a little.'

'Oh, no,' I said hurriedly, 'it was only a moment's suggestion on my part. I didn't really mean it. One gets a bit sleepy sitting in this garden.'

'An awful thing's just happened,' said Mrs. Lane hurriedly. 'If Mr. Johnson will forgive me, the housemaid has just ———' She whispered in Lane's ear.

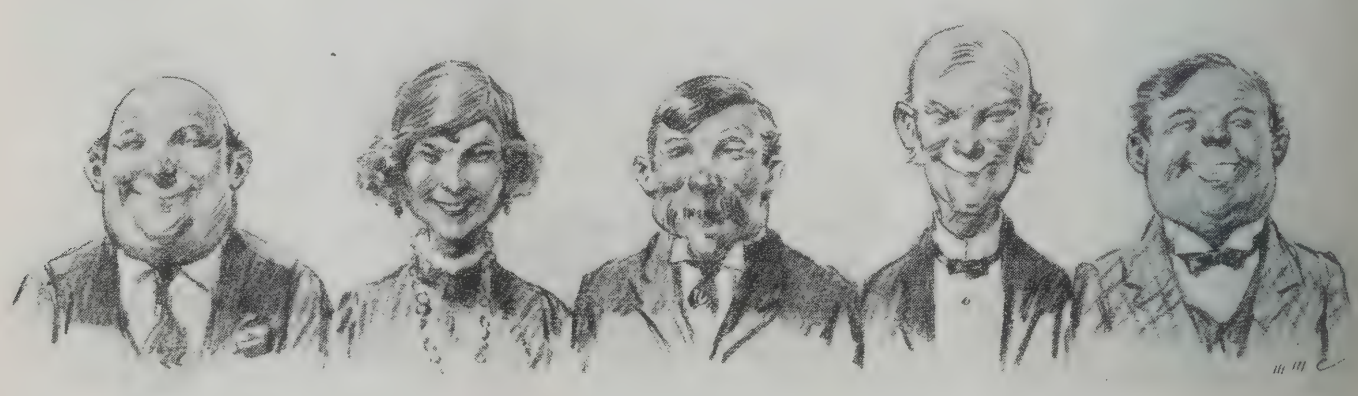
'Oh, has she?' he said laughing. 'What a funny thing to do!'

'It isn't funny,' said Mrs. Lane indignantly. 'She's broken about a pound's worth of china—all that pretty breakfast set!'

'Never mind, dear,' he said, patting her shoulder; 'we'll get another one in no time. In my opinion,' he said, turning cheerfully round to me, 'maids don't smash things half often enough. One gets so tired of always seeing the same china at every meal. We haven't had a new breakfast set for ever so long.'

'Oh, of course, if you're a millionaire ———,' said Mrs. Lane, tossing her head.

'That's all right, darling,' he answered, wiping his forehead with the back of his hand; 'don't you worry. We'll be in to tea



soon. Or shall we have it out here? By Jove, it would be jolly to have tea in the garden!'—speaking as though no one had ever had the idea before. 'Just think, having tea in the garden! What a jolly thing to do!'

I suddenly felt that the last thing in the world I could ever do would be to have tea in the garden.

'I'm awfully sorry,' I said, getting up, 'but I must be getting back, I'm afraid. I'll come and have tea another day.'

As I went down the Edgware Road on the top of a bus, I was conscious of a deep and all-pervading melancholy. The world, although the sun was shining, was suddenly gray. I could believe in no one's goodness of heart. All my friends, as their names occurred to me one after the other, seemed to me treacherous and false, all my little ambitions vain and absurd. I realized, with a sudden mental jerk, that Lane had done this for me, and did I spend many weeks in his company I would become a misanthrope, a final hater of my kind. In the succeeding days I considered every possible medium through which I might work upon Lane's mind. The case became an obsession with me as none of the others had ever been. I realised, as I said just now, that most of the other problems had been solved by the readjustment of surroundings. How was I to readjust Lane? Into what company could I throw him that would depress him and lower his vitality? What was there latent in him which, if exaggerated, would turn sweet to sour, amiability to bitterness, love to hatred? There was golf, for instance. He did not, so far as I knew, play golf. That would undoubtedly be good for both his figure and his temperament. Or there was bridge, or I might interest him in some freak religion, or drive him into stamp collecting. No, as I thought of all these things, their futility froze my inventiveness.

At breakfast one morning I was especially bothered by my problem. The thing was beginning to disturb my sleep. I was neglecting the rest of my work for it. I idly turned over the pages of *The Times*, then, looking down the agency column, my attention was suddenly caught by this: 'Society for the Promotion of Happiness. All those who are interested in the happiness and well-being of their fellow creatures are cordially invited to pay a visit to the offices of the above Society (hours 10 to 10), where they will realise that gloom and depression are not natural to the spirit of man, and may be avoided by the simplest methods. Offices: Cumberland House, Victoria Street, S. W. 2.'

I scarcely know what it was that suddenly determined me to pay these people a visit. It was not that I could hope for any real help from them with regard to Lane's case, but here were obviously some more optimists of Lane's own kind. I was, perhaps, curious to see whether they beat him at his own game.

The next afternoon I climbed the stone staircase and knocked on a door. I entered a quite ordinary-looking office, where, behind the usual wooden barrier, a girl was seated typing, and an elderly lady at a table was biting the end of her pen. 'Is there anything I can do for you?' she asked, looking at me rather sternly.

'I was interested,' I said, 'in your advertisement in *The Times* yesterday. I came round to see something of your work.'

'You must talk to Miss Allan,' said the lady. 'I'll inquire whether she's free.'

She returned a moment later, saying that Miss Allan would see me, and I went through into a farther room that had a bright red carpet and was hung with framed supplements from the illustrated papers.

Miss Allan was a strong, rather stern-featured woman, dressed in a bright orange that clashed somewhat painfully with the carpet, having every sign about her that she knew her own mind, and was not going to stand any nonsense from anybody.

'You've come to inquire about our work?' she asked, pushing her spectacles a little farther back on her nose.

'Yes, I have,' I answered. 'I was interested by your advertisement.'

'Our work,' she began in a high singsong voice, as though she were reciting an oft-repeated lecture, 'is an effort to bring into this gray-tinged world the spirit of life, happiness, and gaiety, to make men and women realise that it is in themselves to command their destinies, and that by taking a little thought, practising certain simple exercises, and refusing to allow their minds to be invaded by ill-disciplined thoughts and desires, they may attain a high standard of cheerfulness and sociability hitherto unimagined by them, and that by laughter, and the happy employment of music, and the sturdy practice of vegetarianism, they may bring gaiety into the lives of their fellow human beings and light up the world with sunshine.'

She paused to take a little breath. She went on again: 'To look on the bright side of things is, after all, easy enough for all of us, if we do but obey certain simple rules. Selfishness is the curse of the modern age, and I have found that by a steady reiteration of some of the more obvious rules of a well-ordered life, by such simple things as early rising, cold baths, a few exercises, and the steady practice of healthy laughter, the world may be turned into a garden, and we may go dancing through life, our heads up, our voices lifted in song, our mood an inspiration to all those around us. Our charges are,' she added rapidly, 'three guineas for a course of six lessons, five pound ten for twelve. Families of more than three can be dealt with at a cheaper rate.'

'Thanks very much,' I answered. 'Can you show me any of your work in progress?'

'Certainly,' she said, looking at me with some suspicion. 'Are you from a newspaper, by any chance?'

'No,' I answered. 'I'm simply a private individual.'

'Have you got sickness in your family?' she asked quickly. 'Has your wife left you, or are you in any way financially embarrassed?'

'Really,' I answered, 'that seems to be my own affair, or, at any rate, should remain so till I've agreed to take some of your lessons.'

'Oh, certainly, certainly,' she answered with indifference. 'I should say that a dozen lessons would do you all the good in the world. However, you shall see first exactly what we're doing.'

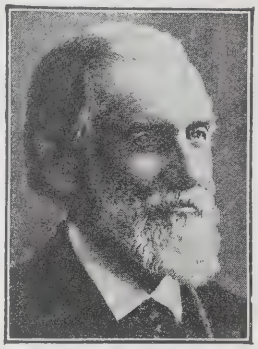
(The concluding installment of this story will appear in an early issue. It fully maintains the interest of the first part.)

'The human intestinal tract is the most prolific source of disease.'—PROFESSOR FOGES, VIENNA.

The Lazy Colon

(Large Intestine)

By CHARLES M. CAMPBELL
Associated with
ALBERT K. DETWILLER, M.D.



Sir Hermann Weber, an eminent English physician, was descended from exceptionally short-lived ancestors for four generations. Making a study of longevity, he decided to try for a long life. His celebrated book on 'Longevity' was published in his 95th year (1923). The principles he lays down are fully digested in the chapter on Longevity in 'The Lazy Colon.'

An authoritative discussion in simple language of newer methods in the treatment of Intestinal Stasis (constipation and allied disorders).

Not a Health Book in the usual sense nor given to fads and theories, but derived from the investigations and discoveries of 300 Physicians and Scientists of international reputation, since the X-Rays were first used in studying the 28 feet of human intestine in 1907. *This tract, says Foges of Vienna, is the most prolific source of dangerous disease.* Including particularly heart disease and cancer; also kidney, liver and stomach disorders. Simple, authoritative, extremely interesting.

Many re-orders. A reader in ordering six additional books, says: 'I intend to give the six additional copies to friends. The book is so sensible and full of helpful information clearly presented that I think it will be prized in any home.'

Judge E. H. Gary, head of U. S. Steel: 'It is a fine piece of work and I congratulate you.'

Prof. John Dewey, Columbia University, N. Y.: 'I read the book with much interest, parts of it several times. You have rendered us all a service by making this material available.'

Martin W. Barr, M.D., noted physician and author: 'Sat up most of last night reading this delightful and masterly book.'

Dr. J. H. Kellogg, Battle Creek Sanitarium: 'The authors are to be congratulated on producing this excellent work, which will no doubt have a large sale.'

Hon. Wm. R. Green, Chairman Ways and Means Committee, Congress, says: '"How to Add 20 Years to Your Life" would be a good title for this book.'

Lloyd H. Wright, San Gabriel, Cal.: 'Send by return mail one copy of "The Lazy Colon" recommended to me by my physician, Dr. Olsen, of Los Angeles.'

READ THESE CHAPTER TITLES

Biggest Dividends in Life Paid by a Healthy Colon; Contrary to General Belief There is Little Digestion in the Stomach; How Microscopic Plant Life Promotes Putrefaction in the Colon; Surprising Theories of Water Drinking; Mysteries of the Intestine Revealed by X-Ray; Some Curious Causes of Intestinal Stasis; Commonest Form of Stasis; Startling Theories of Self-Poisoning; Story the Urine Tells; Hardening of the Arteries and Blood Pressure; Purgatives—Their Proper and Improper Use; Mineral Oil as a Laxative; Bran or Agar, Which?; Vitamin Facts; The Ounce of Prevention; Greatest Menace of All; Intelligent Use of the Enema; The Coated Tongue—Its Cause and Meaning; Is Sugar of Milk the Long-Sought Remedy? The True Story of Mary's Little Lamb

(*Continued from page 13*)

chusetts, expresses surprise that there is any question over John Roulstone's authorship of the poem; it has always been accepted in the Capen family, she says, that the verses originated as has been told here.

It remains to say that there is one element lacking to make the evidence unanimous and it is the claim of authorship for Sarah Josepha Hale, a distinguished writer of the period and the author of numerous poems for children. Mrs. Hale had a career of great usefulness and is credited, among other works, with being the force that made Thanksgiving a national holiday, and the organizer of the Seaman's Aid Society, as well as a strong force behind the Bunker Hill Monument fund. She was the author of a score of books and at one time editor of the famous *Godey's Lady's Book*. All these mark her a woman of extraordinary force and ability. In this instance the question is not: Could Mrs. Hale have written the lamb poem? The question is: Did she write it?

Naturally, the descendants of Mrs. Hale are putting the available testimony forward, as follows: First, the fact that in 1830 there was printed at Boston a book entitled:

POEMS
For Our Children
Designed for
Families, Sabbath Schools, and Infant Schools
Written to inculcate moral truths and virtuous sentiments
By Mrs. Sarah J. Hale

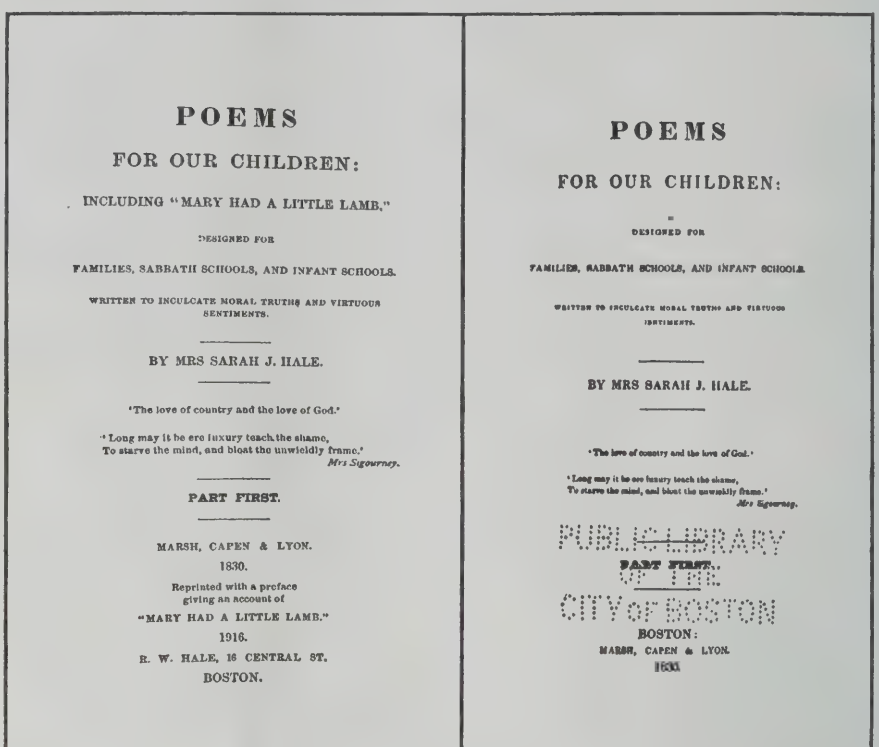
'The Love of Country and the Love of God.'

'Long may it be ere Luxury teach the shame,
To starve the mind, and bloat the unwieldly frame.'
Mrs. Sigourney.

Part First

Boston:
Marsh, Capen & Lyon
1830

And this book contains a poem, 'Mary's Lamb,' which comprises three stanzas of eight lines each. The last twelve lines contain all the moral reflections; the first twelve, as every reader knows, are pure incident. It is the first twelve lines that are most spontaneously quoted when the poem is recalled—for they make a simple picture. The following lines are a little more involved as most moralizing is.



POEMS

FOR OUR CHILDREN:

INCLUDING "MARY HAD A LITTLE LAMB."

DESIGNED FOR

FAMILIES, SABBATH SCHOOLS, AND INFANT SCHOOLS.

WRITTEN TO INCULCATE MORAL TRUTHS AND VIRTUOUS SENTIMENTS.

BY MRS SARAH J. HALE.

'The love of country and the love of God.'

'Long may it be ere luxury teach the shame,
To starve the mind, and bloat the unwieldly frame.'
Mrs Sigourney.

PART FIRST.

MARSH, CAPEN & LYON.
1830.

Reprinted with a preface
giving an account of
"MARY HAD A LITTLE LAMB."
1916.

R. W. HALE, 16 CENTRAL ST.
BOSTON.

POEMS

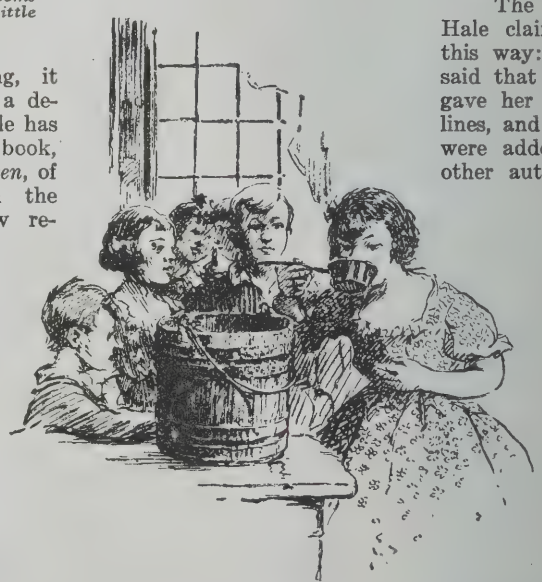
PUBLIC LIBRARY
OF THE
CITY OF BOSTON

BOSTON:
MARSH, CAPEN & LYON.
1830.

Title-page of original and reprinted copies of 'Poems for Our Children,' in which 'Mary Had a Little Lamb' first appeared.

Before proceeding, it should be said that a descendant of Mrs. Hale has republished the little book, *Poems for Our Children*, of which he says on the wrapper it is 'Now reprinted without change in size, type, binding, or cover, with the addition of a brief preface telling its history, 1916.'

It should be noted, however, merely in the interest of fact, that the reprinted title-page does carry a change by bearing the line 'INCLUDING "MARY HAD A LITTLE LAMB."'



Had this line appeared in the 1830 edition, it would have been most significant: it would have indicated either that the little poem had a vogue at that period which made it desirable to give it special advertisement, or that the authorship had been disputed and was here strongly challenged by special mention of it among Mrs. Hale's productions. But this, of course, is mere speculation; the poem never was specially mentioned by Mrs. Hale. She apparentl did not regard it as of unusual importanc as indeed in her scale of work it was no When she published another book in 183 she referred to the volume of 1830 and eve mentioned some of its poems, but n 'Mary's Lamb.' Sh writes in her preface t the children in 1834:

'Some time ago I wrot a little book, naming i *Poems for Our Children* A number of these poem have been set to musi by Mr. Mason; and you have never seen th book, you have probabl heard or sung

'If ever I see
On bush or tree'

or,

'Our father in Heave
We hallow thy name

I was told that thes songs were very popula with the young, and thi encouraged me to writ this book for your grat ification. I have include in this book all th favorites from the othe and added others whic I hope will become favor ites.

'Mary's Lamb' wa one of the pieces re printed in this later vol ume.

The case with th Hale claim, then, stand this way: Mary Sawye said that John Roulston gave her the first twelv lines, and that other line were added later by an other author, Mrs. Hale The Hale de scendant claim tha Mrs. Hal wrote the en tire poem, tha its presence i her boo proves it, anc that to doub it is to cas aspersion or Mrs. Hale's truthfulness.

It is not believed by the present writer that the question of truthfulness enters at all. Certainly Mary Sawyer was a truthful woman, and certainly Mrs. Hale was.

Mary Sawyer says that her lamb followed her to school, was put out of school, and that John Roulstone, hearing of it, composed a little poem about it—all he knew about it, in fact, and all that Mary said happened. Mary does not tell about the teacher moralizing upon the love which

hildren should bear to animals. Probbly that was the furthest thing from he teacher's mind when she saw the chool thrown into disorder by the udden apparition of the lamb.

Therefore, the moral portion does ot appear in Mary Sawyer's version f the poem.

If there is no doubt that the inident occurred, there is no doubt iat the poem describes it just as it ccurred. It did not describe the eacher's colloquy with the class, ecause it did not occur.

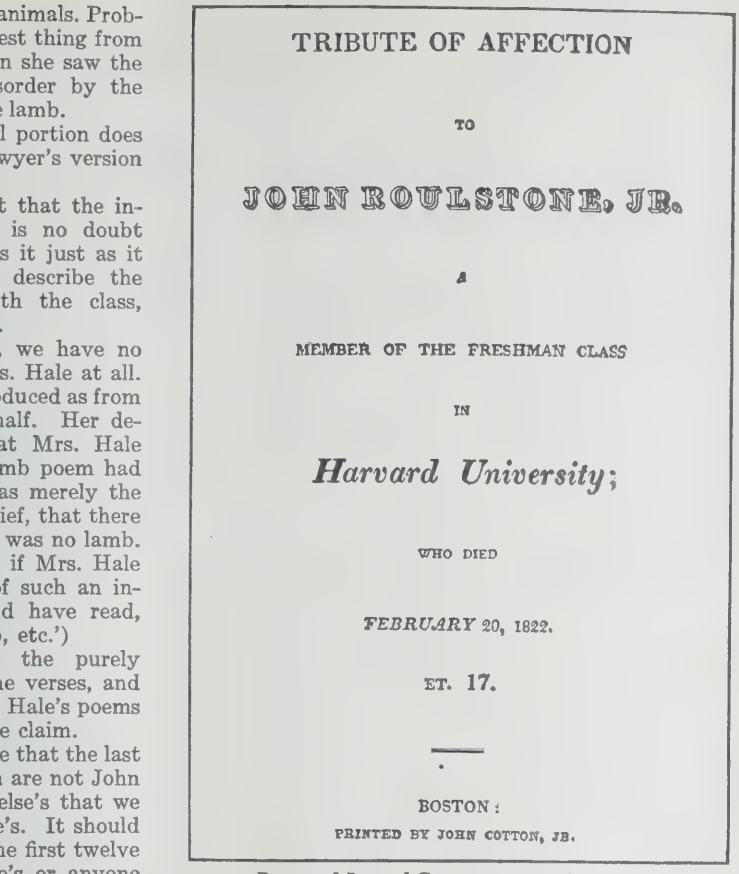
On the other hand, we have no irect account from Mrs. Hale at all. o letters have been produced as from er hand or in her behalf. Her dendants maintain that Mrs. Hale ways said that the lamb poem had o basis in fact and was merely the ncy of her mind; in brief, that there as no Mary and there was no lamb. Someone has said that if Mrs. Hale ad been the heroine of such an indent, the poem would have read, arah had a little lamb, etc.')

This statement of the purely naginative origin of the verses, and ie 1830 edition of Mrs. Hale's poems e the bases of the Hale claim.

It is conceded at once that the last velve lines of the poem are not John oulstone's or anyone else's that we now, except Mrs. Hale's. It should e conceded also that the first twelve ies are not Mrs. Hale's or anyone se's that we know, except John oulstone's. In the face of the two ntentions, certainly the weight of every nd of testimony is on the side of the erling origin of the first twelve lines.

Consider the course such verses would ke. They were first made as something of 'josh,' as we should say today. Mary had nuggled her lamb into school and had been und out; the joke was on Mary. The ies got themselves recited around the eighborhood to her intense annoyance. o wonder she was not inclined to talk out them, until the Old South Fair owed her an opportunity of doing some od with her story. She was of that type, e 'doing good' nd, who would be illing to suffer a tle personal innvenience for the ake of service. om farm to farm, om party to party, e poem would run people repeated l sorts of verse in ose days much ore frequently an we do now—ntil it became a mmon byword. o one knew where i came from, no ne cared. Not eryone knew who ary was—there ere plenty of larys in New England. We recite day,

winkle, twinkle,
little star,
ow I wonder what
you are.



TRIBUTE OF AFFECTION

TO

JOHN ROULSTONE, JR.

A

MEMBER OF THE FRESHMAN CLASS

IN

Harvard University;

WHO DIED

FEBRUARY 20, 1822,

ET. 17.

BOSTON:

PRINTED BY JOHN COTTON, JR.

Reverend Lemuel Capen wrote a sixteen-page tribute to John Roulstone.

But who wrote it? Do you know? Did the person who wrote it originate it? Did the person who first wrote Mother Goose rhymes originate them, or simply gather up couplets and rhymed sayings which had been polished smooth by long usage in the common speech? There may have been a little Jack Horner, but who originated the lines about him?—were they just written out of someone's imagination? Probably not—Jack had somewhere set someone a-rhyming on his name.

Now, the point of this is that the Sawyers lived near the north line of Massachusetts and the Hales (or the Buells, for that was Mrs. Hale's maiden name) lived near the south line of New Hampshire, and that for all purposes they were in the same general community, and both within the range of any cross-country saying that might arise. For, as the popular song circulates among us today, so did smart sayings, good stories and new verses circulate throughout adjacent counties. 'Mary had a little lamb' is one of those sayings which easily fit into the memory and easily flit from the tongue. There is no earthly reason for Miss Buell failing to hear of it, even to recite or sing it herself. Sarah Buell was sixteen years older than Mary Sawyer, and was married the year that John Roulstone died.

Is it illogical, in view of the supporting testimony of the Sterling claim, to say that Sarah Buell, now Sarah Hale, a widow, starting out to make her way in life by means of her pen, should recall the countryside saying about Mary and a lamb, and use it as the basis for a little moral preachment on kindness to animals? It is not illogical—and it neither accuses Mrs. Hale of plagiarism nor Mary Sawyer of untruthfulness. To all intents and purposes the poem which Mrs. Hale had in mind—*the poem about kindness to animals*—was hers. But it is not the same poem that Mary claimed—the poem that is exclusively about one lamb.

Mary was right when she said there was a lamb and a Mary.

Mrs. Hale was right when she said that, with her, it was only imagination, for that is the only way she could have had it even when hearing the simple verses come cross-country from Middlesex County in Massachusetts to Sullivan County in New Hampshire. It is the only way every reader since has had it. But imagination must have a foundation in reality and Sterling furnished the reality.

An interesting inquiry might be pursued along the line of the literary higher criticism to ascertain whether the acute and expert sense of style can detect a 'seam' between the first twelve lines and the rest of the poem. How naturally the first lines flow. Each of them is, in a way, complete in itself.

Mary had a lamb.
Its fleece was white.
It followed her to school.
That was against the rule.
It made the children laugh and play.
And so the teacher turned him out.
But still he lingered near.

The whole story is told in very brief and complete sentences. Notice also, how very naturally the lamb behaves.

Pupils of the reconstructed little schoolhouse, and the present-day lamb. Mr. Henry Ford is seen at right.

It does just as a lamb should do. How naturally the teacher behaves too! And how naturally the children behave. There is not an artificial note in all of it. These are twelve lines of the very essence of natural simplicity. But with the thirteenth line there comes a subtle change. The very first thing to change is the style of making a line equal an idea. The twelfth line leaves the lamb outside waiting for Mary to appear. The thirteenth line—

And then he ran to her, and laid—

Nothing so sophisticated as that construction in all that goes before. It is not uncommon in Mrs. Hale's poetry, but it is absolutely absent from the Sterling version of the poem.

And more than the style changes with the thirteenth line—the naturalness changes also and a more sophisticated 'imagination' appears. The lamb is almost made to talk—

As if he said—'I'm not afraid,
You'll keep me from all harm.'

This may be necessary to a moral, but not to the report of an incident.

And then the 'eager children' inquiring of the teacher, 'What makes the lamb love Mary so?' is entirely out of tune with the unadorned and self-certifying naturalness of the teacher's act in turning the lamb outdoors.

Then comes more of the sophistication of style which is entirely absent from the first twelve lines:

And you each gentle animal
In confidence may bind—

That is not the way John Roulstone would write. That is not what he did write, for that is what did not occur. This is the imaginative work of Mrs. Hale. It would be interesting to compare all her poetry with the simplicity of the first twelve lines of the original 'Mary's Lamb.' Such childlike simplicity is inimitable and is not likely to be found anywhere in an adult's work.

THERE is surely significance in the fact that the public in general usually gets no farther than the first twelve lines, there being an instinctive feeling that after that point the poem passes from the objective to the subjective, from the natural to the artificial, from lyric simplicity to homiletic sophistication.

And there is another point—a minor one, to be sure—but worthy to be noticed: the sex of the lamb. Mary's lamb is 'it,' as undoubtedly a lamb would be to boys and girls of the age of John Roulstone and Mary Sawyer. In her later years, Mary told that the lamb was a ewe. But to a boy of twelve and a girl of eleven, the lamb was 'it.' But in Mrs. Hale's version the lamb goes through all the verses as a male: 'he, him, his.' In the second line of Mrs. Hale's version—'Its fleece was white as snow' is the only note of neuter gender; all the other notes are masculine. In Mary Sawyer's poem this inconsistency does not appear.

Mary Sawyer was married in 1835 to Columbus Tyler. For thirty-five years she was a matron in McLean Asylum, Somerville, Massachusetts. Her home in that place was and still is well known.

War Feeds the Money Trust

(*Continued from page 7*)

But the United States did find it *possible*—and this is the essence, the whole point—to minimize, to reduce the cost of money to debtors. It *has* been done: it *can* be done again.

It is not necessary to dwell even for a moment on the beneficial results which rest in the possibility of reducing the terrifying accretions applying to the initial cost of money, or preventing the continued growth of this enormous money trade. It has the power to enslave the race. Rightfully used, however, it can become the lever that will raise worlds, that will lift man to undreamed heights of progress and civilization.

IT IS hoped that rationalism will be introduced into the subject of modern financing—on the borrower's, the debtor's side. There is plenty of rationalism in an inverse ratio on the side already of usury, of the money organization: it is an *ancient science.* No modern science has been developed so highly, with such exactitude, or is so unerring in its conclusions, or has such complete knowledge of its own power. Borrowing heretofore has been subject to the lender's science, to rules devised by him.

It is possible that some fundamental principle, some hitherto not discerned element can be found, something vitalized with a force of its own, with which to shape a fiscal tool or vehicle to carry men to higher peaks of civilization than have ever been reached: something which will permit man's mind to step out of the age-old vicious circle of financial method—which only kills eventually all who enter it—and begin a new ascent, to make a spiral stair of the circle, as it were, to found a new and advanced fiscal science upon the ruins of the old, as the advanced and tremendously valuable science of chemistry rose from the fallacious 'black art' of alchemy, and as the science of astronomy with its magnificent sweep, its search into infinitude, issued from the magical rites of astrology. *And it is, moreover, possible that such a vital principle when found and applied will be of American origin.*

Pen-and-ink impression by
GERALD VAN DER HEYDEN

There are things which indicate that the existing fiscal theories formulated and practised by the masters of money are a superficial gloss over an unsound base; and one proof of this is the fact that it deals only in the superficial, the impermanent, and never in substance and reality. It deals with money not as a medium of exchange as a measure of value, as a standard of value—a means only, a useful tool at the right hand of man—but as a *commodity* and secondly as a *self-reproducing* commodity, that is to say on the philosophy, for example, that $1.00 becomes more than itself in one year becomes say $1.07 of its own volition.

This is an attribute denied by Nature to anything else in the world—reproduction always must come from *union* in some form or other with something else. *Money plus labor* therefore *is* productive, this union creates something more than either the original money or the original labor. But one dollar of money allowed to rest in a bag in a vault, say, for ten years, will be exactly one dollar when taken out at the end of that time. But fiscal science asserts that if that one dollar is *borrowed* by somebody, and even though it is immediately dropped into a sewer and left there, it will amount in ten years' time to $1.75.

NOW this is a purely imagined power in money: it does not possess any such capacity unaided. A young seedling, however costing one dollar and planted now, may in ten years' time, become a remarkably productive fruit tree; or a rough block of wood or pile of lumber, when united to the handiwork, the labor, of someone, and it does increase in value over its initial worth—and besides that adds to the property and wealth of the community; the land upon which it is built also gains a new value by being united to a real improvement; and the land immediately adjacent thereto gains a certain increase likewise by being united to the spot where the house has risen, where something really new has been created. Something real has been added to the world, a service and useful function have been performed, and therefore things of that sort do gain in value. But the one dollar dropped in the sewer, even though a *borrowed* dollar, remains exactly one dollar, no more or less.

Money is not self-reproductive; money of itself is not worth more at the end of a year than it is at the beginning. It is, like anything else, worth only its face value at *any* time.

Nevertheless, by the operations of fiscal science it readily sells for prices ranging between double its face value to five and ten times that value. People—and governments—who buy it at such figures are on a ruinous road.

They are playing the other fellow's game—and *therefore* must *always* lose.

This is the third of a series presenting some of the hidden features of modern finance underlying public bond issues; and suggesting possible means of offsetting the high price of money. The next article will appear in an early issue.

Reading in Lent

(*Continued from page 8*)

Atkins' *Modern Religious Cults and Movements* (Revell, $2.50). One no longer says of this or that teaching, it is false; one rather sees that blind Samsons, groping about, have found one pillar of the temple, and have sought to build on that one pillar a temple of their own.

Of course, in discussing Lenten reading, one might do better by knowing where the reader is in his knowledge, interest and experience, and what he particularly seeks—an account of the universe, its purpose and its destiny; a strength for the duty of today; or a consolation under some tragic experience.

I have first in mind the intellectual reader who in his pride wishes a respectable entrance to this great field. He may begin with the fact that the thing is here and what it seems to say and mean by its being here. Suppose he begins with William James' *Varieties of Religious Experience*. William James is highly respectable in the intellectual world, being Harvard's great philosopher. Another respectable thinker is William Ernest Hocking, another Harvard philosopher, though his work, *The Meaning of God in Human Experience*, is published by the Yale University Press. *The Meaning of Personal Life* by Newman Smyth (Scribner's); *What May I Hope* by George Trumbull Ladd (Longman's); *Ultimate Conceptions of Faith* by sound old George A. Gordon (Houghton Mifflin Co.) and *The Right to Believe* by Eleanor Harris Rowland, instructor in philosophy and psychology at Mount Holyoke (Houghton Mifflin Co.) are all meat for mature minds. A recent book is *Reality*, a new correlation of science and religion, by Dr. Streeter, of Queen's College, Oxford.

Those who would make up the great deficiency of the Protestant church in its teaching office have a rich field in which to browse. If they seek acquaintance with the ways of criticism regarding the Bible, there is Professor A. T. Robertson's *Luke the Historian in the Light of Research* (Scribner's) or Dr. Sanday's *The Fourth Gospel*. Dr. Moffat's *The Approach to the New Testament* and Dr. Milligan's *Here and There Among the Papyri* (both Doran) illustrate the immense compulsion which religious thought puts upon the highest type of mind.

Suppose it to be the matter of Prayer that engages our reader. Great wealth awaits him in this department. Begin at the boldest outpost of critical examination such as *The Power of Prayer*, a symposium of scholars (Macmillan), and proceed to the warmest classics of inner experience, like that of *Preacher and Prayer* by E. M. Bounds, the obscure Georgia country preacher, or the conversations of *Brother Lawrence*, a barefooted lay brother of the Carmelites at Paris in 1666, taking in by the way Mahoney's *The Philosophy of Prayer*, and Herman's *Creative Prayer*, and Slattery's *Why Men Pray*, and Fosdick's *The Meaning of Prayer*, and you will find a wide range worth exploring. It is significant of our times that the only new contribution made to our knowledge of Prayer in this generation comes from a layman, Glenn Clark, professor of English, Macalester College, whose *Soul's Sincere Desire* has found a large public, while another little book, *Effectual Prayer*, by Russell H. Conwell (Harpers) of *Acres of Diamonds* fame, gives a record of forty years of prayer in Philadelphia. I have wondered why I do not hear more about this little book.

As regards Jesus, the best documents are the Memoirs which we call the Gospels. But if one lacks initiative to think until he has heard what 'modern thought' has to say, there are the *Jesus of Nazareth* by Rabbi Klausner (Macmillan); *The Historicity of Jesus* by Case (The University of Chicago Press); *What Jesus Christ Thought of Himself* by Stokes (Macmillan), and *Belief in Christ* by Canon Gore (Scribner's).

I do not deceive myself that anyone will read all these books during Lent, or even a considerable part of them. They are suggested as possible entrances to those who have not kept track of the immense and rapidly increasing volume of literature on the various subject of religion.

What Do You Pay?

(*Continued from page 4*)

but thirty-two dollars a month for food, five dollars a week for the family table, and the rest for the boy's certified milk. Mrs. Lynn has an allowance of fifteen dollars a week, and out of that pays all house bills and buys what clothes she and the boy have. There are three adults and one child, but the men say that Mr. Lynn always eats his lunch at the best place in town, where his one meal will cost more than the rest of the family spend in a day. So instead of giving Mrs. Lynn due credit for being a wonderful manager I feel like giving her a low intelligence rating. Living in a $15,000 home on $15 a week is the prize inconsistency.

There were whipped-cream families and skimmed-milk families, in that $32 to $135 a month range. There were well-stocked, bought-in-quantity pantries, and hand-to-mouth, day-by-day buying. But the surprising part was that there were so many low food bills.

Several families who had bought Sheraton dining room furniture had reduced their dinner menus to meet its slender lines. Others had bought Royal Bavarian service plates, but had little to put on them. There were men who were dieting to buy diamonds, and whole families who were living on red beans and rice in order to buy Chinese rugs.

Of course much depends on what food means to you. If it is merely sustenance, spend as little as possible and you are all right. But there is a happy medium between the people who are merely animated stomachs and those who live on roots and herbs. Breakfasts are necessarily hurried, and lunch can rarely be a united family meal, but dinners can be one of the real pleasures of the day. That is the time when the whole family can be together, when we can laugh and talk and be our nicest selves. And while some people can be clever and amusing on vegetable soup, it sometimes takes chicken and a fancy salad to make us so.

DACOR

Saves Clothes
and Closet Space

NEW clothes hook, only 6" long, notched to prevent slipping and crowding, holds six suit or dress hangers. Keeps your clothes in wearable condition.

DOUBLES CLOSET CAPACITY

Only three Dacor Hooks necessary to equip the average closet for neat accommodation of 18 garments. Hooks are durably constructed and attractively finished in nickel.

Set of Three Hooks $1

At leading hardware and department stores. If your dealer cannot supply you order direct enclosing dealer's name.

Manufactured by

From Keels to Wheels

(Continued from page 2)

were reconditioned for use as towboats; and seven seagoing tugs were purchased from the Shipping Board at a cost of $42,500 apiece. All of the ships had to be gone over carefully and made seaworthy, boilers and winches put into shape, steering apparatus tested and repaired, so the trip could be made in safety. Shipyards at Norfolk, Chester, Pennsylvania, and Kearny, New Jersey—located near Ford branch factories—were engaged to dismantle the fifty submarine-type vessels.

Winter puts an end to navigation on the Great Lakes for four months each year. It was considered advisable to hold most of the ships on the Atlantic seaboard until the spring of 1926. One vessel, however, the *Lake Fondulac*, was taken to Fordson for experimental purposes. It reached the plant on December 17, 1925.

TOWING units of a tug and two lakers were decided upon, and a trip time of thirty-five to thirty-eight days set. The towboats were equipped with wireless so they could keep in daily touch with the home office, where their movements were recorded on a large map, as well as receive storm warnings and communicate with other ships and land stations. Each laker had to be assigned a crew of nine men and provisioned for the trip, and each had to be taken to one of the three shipyards and there loaded with submarine scrap. It was found that the remnants of one submarine-type boat would fill approximately two and a quarter lakers. In spite of the difficulties encountered on the route only one ship met disaster during the navigating season of 1926. This, the *Lake Grogan*, was driven ashore at the eastern end of Lake Erie during a heavy storm.

The operation at Fordson is basically simple. The incoming ship is not taken immediately to the wrecking line; instead, it is tied first to a nearby wharf, where it is stripped of wood and other light materials. As the wood is taken from the boat it is placed on conveyors, sorted, the nails pulled, and then carried to the woodworking shop where it is cut into specified sizes for crate units. Nothing is wasted, not even sawdust or scrap pieces. Standard hardware is removed from the ships and stored.

Once in the dismantling line the ship soon begins to lose its distinctive appearance. Masts are unstepped and loaded onto waiting cars. Smokestacks are loosened and removed. The bridge is cut away; deck cabins are hoisted over the side and towed away for use elsewhere, some as yard offices at different parts of the plant. The scrap of the boats dismantled at the seaboard is unloaded and carted either to the furnaces or to the piling grounds according to the day's needs.

While this is going on the deck is chalked off into sections, each section being a multiple of the charging box capacity, and the torches are put to work. As the sections are cut free the cranes hoist them to waiting cars. Lead pipe and copper tubing are removed, lifeboats, life preservers, rope, chains, ventilators, lavatory fittings, bolts, screws, locks, steam winches, doors, hatch covers, cables, anchors, engine room controls.

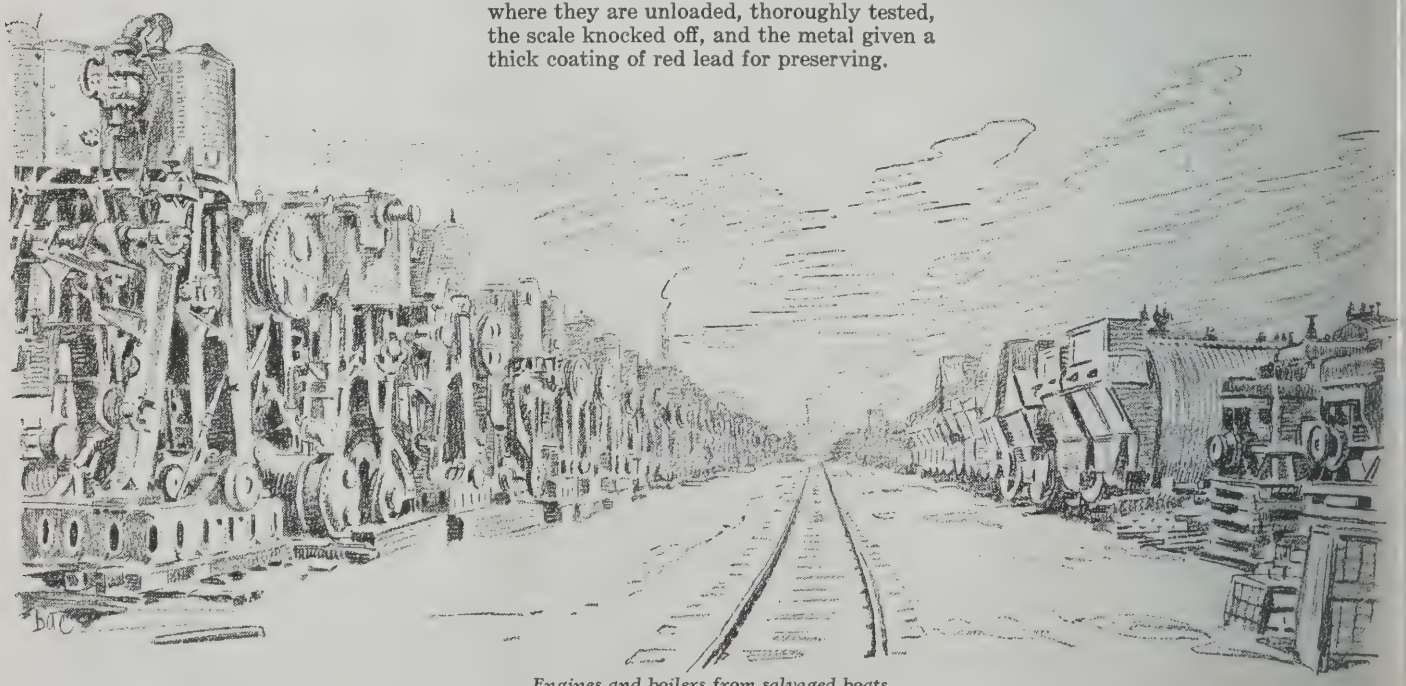
AS THE upper part of the vessel yawns open under the play of the torch and the crane the boilers and engine are exposed. The lakers are fitted with three-cylinder reciprocating engines of 1,000 to 1,400 horsepower; the submarine-type with steam turbines. With the decks removed, the boilers and engines are loosened from their foundations and cables attached. The boilers are hoisted first. Each weighs about forty tons. They are swung onto specially constructed cars, cradled so they will not slip. Then comes the engine. It weighs from seventy to eighty tons, yet it is hoisted as a complete unit. A locomotive tows the boilers and engine to the storing grounds where they are unloaded, thoroughly tested, the scale knocked off, and the metal given a thick coating of red lead for preserving.

With the deck removed and the pow plant out, attention is turned to the sic plates of the ship. These too are chalked sections and the torch used to cut then Clouds of rust fly as they are lifted free.

THE rudder is unfastened and hoisted entirety. The ship nears the end of the li a mere pan, barely above the surface of th water. The propeller shaft is exposed an removed in sections. The spare propelle are preserved for possible future us Stripped almost nude, the pan is ready fo the final curtain. A crane tows it into th drydock. It is lifted to the surface and hole punched in the bottom to drain wha ever water may be there. Then the pan, to is chalked into sections, the flame separate them—and the ship passes into its ne existence.

The work of tearing up the submarine type boats went on at the eastern shi yards throughout the winter. While it wa in progress extensive preparations wer under way at Fordson for handling the flee as soon as the ice should clear. It was de cided to have a unit of ten ships in the di mantling operation. With this in view special dock was constructed. Travelin cranes of various sizes were bought, one mammoth 200-ton wrecking crane capabl of lifting an entire power plant from vessel's hold. A special floating drydoc was built for the final phase of the operatio Miles of track were laid from the dock t the piling grounds where the material wa to be stored. Arrangements were made fo handling the scrap in the blast furnaces Even a small woodworking shop was in stalled at a wharf near the dismantling dock

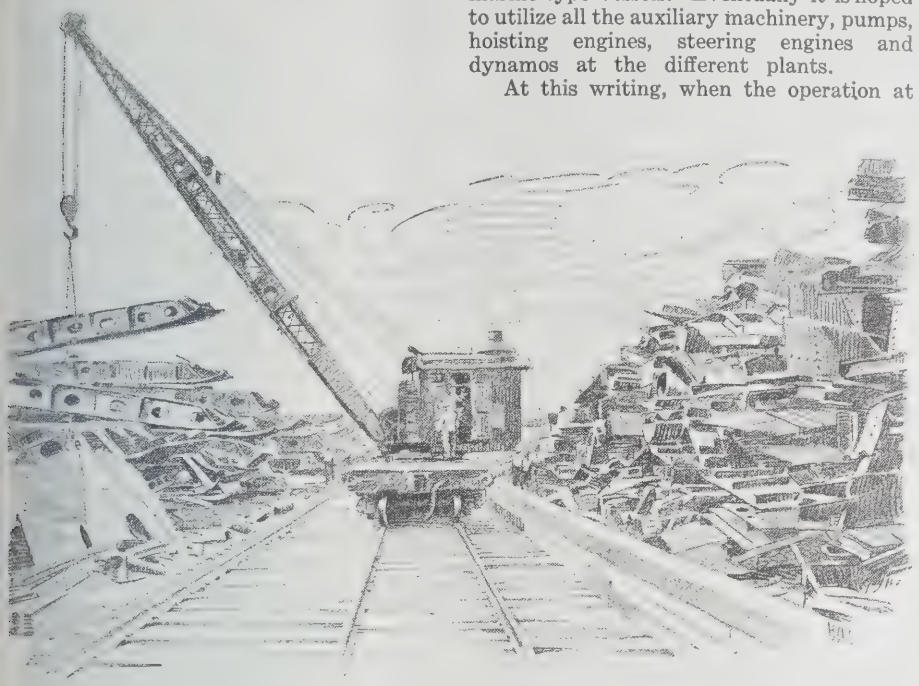
Different scrapping methods were use experimentally on the *Lake Fondulac* t determine the most efficient. At first th deck plates were literally torn off, hydrauli jacks forcing the rivets from below whil cranes tugged at them from above. Th plates came off readily enough but the



Engines and boilers from salvaged boats.

vere too jagged for efficient handling, and he method was later abandoned. Another arly experiment was the use of large roller hears for slitting the sides of the boat, ut these also were abandoned. Finally the xygen-gas torch was adopted for most of he cutting work.

With the opening of navigation in the



Piling the scrap at Fordson.

able quantities, and each ship yields about fifteen tons of non-ferrous metal.

Eleven boilers have been reconditioned and installed at varous points. One engine, equipped with a thousand-kilowatt generator, is in active operation at the Fordson locomotive shop; experiments are being conducted with the turbines from the submarine-type vessels. Eventually it is hoped to utilize all the auxiliary machinery, pumps, hoisting engines, steering engines and dynamos at the different plants.

At this writing, when the operation at Fordson has virtually ceased because of the winter closing of navigation, the total actual scrappage is 115 ships. Seventeen more, however, are in the process of dismantling, making the equivalent of an additional six completely scrapped ships, or a grand total of 121. Of the submarine-type boats, thirty-four are completely scrapped and sixteen are being torn down. Eighty-seven lakers have been received at Fordson, eighty-one completely scrapped, and six converted into barges. One laker was scrapped on the Atlantic seaboard. It will probably be the latter part of the summer before all the ships are dismantled.

It is impossible to say whether the project will yield a profit. The chances are that the company will break about even through the utilization of every possible article. But the project cannot be measured in terms of money, for it was conceived, and has been carried out, in terms of service and experiment—service to a Government that was hung up with useless ships on its hands, and experiment in tackling a new and massive task. Part of the profit will appear in increased engineering experience.

The 199 ships, swinging idly at their moorings, represented titanic waste, they marked the epitome of uselessness. Waste and idleness, whether of men or of labor or of materials, are fundamentally wrong, for they are the chief cause of low wages and low standards of living. In buying the ships the Ford Motor Company undertook to turn them back to usefulness. It ventured to restore them to their original purpose, to transportation. And in restoring them nothing is wasted—nothing save the dust, blown away by the wind. The spirit and fiber of the ships that rode the sea now ride the land in the form of motor cars.

oring a schedule for the ships had to be orked out. The operation at Fordson, nce started, had to be kept going connuously. This meant that a reserve upply of ships must always be on hand. rom Norfolk to Fordson is approximately ,500 miles. The route called for utmost kill in the handling of the ships, leading s it did through the fog and storm area of ie North Atlantic coast, the difficult t. Lawrence route with its twenty-six cks, Lake Ontario, the Welland Canal, id treacherous Lake Erie, noted for its idden squalls.

The reclamation work has by no means ided, however, with the passing of the ip; it has only entered a new phase. A e must be found—and found within the nits of the company—for every article taken om the 199 vessels, for every bit of metal id cork and wood and cloth. The steel ates comprise, of course, the most imortant item. These are melted in the huge harging boxes and then go into the making motor car and tractor parts. Thirty-even different parts are at present made, ostly shafts, axles and gears. Hydraulic ears, the largest ever built, have been ade for cutting the scrap into usable sizes.

A new process has been devised for re-vering the copper tubing, and drawing it size for use in the motor cars and tractors. he lead pipe is all reconditioned, cut to tandard size, and stored for future call. ork from the life preservers has been tilized in insulating some half-hundred y kilns at the Iron Mountain plant of the mpany in Northern Michigan. Re-gerating units have been installed at some the company's lumber camps, as have hting units, pumps and other equipment. sbestos has been recovered in consider-

In All the World No Other Book Like This!

TWENTY of the foremost authorities on Agriculture wrote this remarkable, unique book of universal interest.

16 Chapters 440 Pages
50 Fine Illustrations

Edited by JOSEPH S. CHAMBERLAIN

Advisory Editor: C. A. BROWNE
Chief U. S. Dept. of Agriculture—Bureau of Chemistry.

"Chemistry In Agriculture"

The Story of Nature's Inner Life

Contents of Vital Importance to Everyone:

Crops And The Soil
Fruits And Vegetables
Maintaining Soil Fertility
Vitamins In Nutrition
Chemistry In Animal Production
Chemistry To Save The Crops
The Evolution Of Our Diet
Fertilizer, Feed And Insecticide Control
Chemistry Of Milk And Its Products
And Seven Additional Chapters of Equal Interest.

Attractive, Durable Cloth Binding

SOLD AT COST

PRICE - $1.00 POSTPAID

Sold at cost for the general good. The book which has appealed with equal force to the executive, financier, industrialist, foreman, farmer, teacher, student and the wide-awake public generally.

Kipling Has a Grouch

(Continued from page 3)

supper. Investigating the cause of the racket, I discovered that the farmers and townspeople were now assembling for their Saturday-night beer. From then until ten o'clock that night there were sounds of good cheer over the ale and cider in the public room.

Sometimes this part of England is called 'Silly Sussex.' During a tour of the 'pubs' after supper I learned the reason for this appellation. The farmers of Sussex do not nurse a can of beer for several hours in studied silence as is often the case in other parts of England. In Sussex they laugh and crack their jokes.

At the Bell Inn public room there was a goodly crowd of bearded old country folk having their bit of fun. For a half-hour I sat in a corner with a glass of good Sussex cider, listening to their jokes. But vainly I strove to understand. Their Sussex dialect was too broad and too strange for an outsider to grasp at first hearing.

FROM the Bell Inn I went to the Rose and Crown. There in the large low-ceilinged public room was a monstrous log fire blazing in a fireplace large enough to roast an ox. An exciting game of push penny was in progress with the barmaid challenging all comers. But again finding it impossible to understand the old farmers, I returned to the Bear, which by that time was doing a thriving business.

That night I slept in a feather bed and the only noise was the mournful squeak of the inn's sign, which swung on rusty hinges outside my window.

When I awoke the next morning the light of day showed me a scene which was well hid the night before. The straggling single street of Burwash with its clusters of cottages lies along a ridge. Below is a peaceful valley beyond which the higher wooded hills of the Weald rise. The sun was on the ridge and the hills, but in the valley was a sea of mist. From the cottage chimneys smoke was curling. A more peaceful scene is unimaginable.

The mellow old village of Burwash has a church, St. Barnabas, which is a perfect part of the scene. It stands across the road from the Bell Inn, commanding the valley below, its steep pointed spire a landmark for the countryside. It was in this steeple that the notorious old foundryman, Master John Collins, hid the guns that he had planned to sell to enemies of the king, as told in the story 'Hal o' the Draft.' Even now in the south aisle of the church is the long, sepulchral slab of iron which commemorates a local ironmistress, one of the famous Collins family.

THE old sexton showed me the brass of Anthony Cruttenden (1660), over which one steps, and pointed out the broken graves in the churchyard. Graves with broken backs were resting places of those who had died of consumption, according to the sexton. 'Them as have had a spice of consumption will have broken-backed graves sooner or later,' he declared.

At the services which I attended that morning the vicar preached a sermon on 'Stewardship' and incidentally alluded to the fact that Mr. Kipling had helped materially in the recent restoration of the roof of the ancient church.

BATEMAN'S, Kipling's home, is hidden in the valley down from the ridge on which Burwash rests. It is a huge well-weathered stone house that gives good evidence that it was built in the 'spacious days of good Queen Bess,' as it truly was. The old house, which appears to be as solid and enduring as a Norman castle, is said to have been erected by a forge master who made a fortune founding guns for the sturdy ships that fought the Spanish Armada and voyaged to the New World.

From a distance the most striking feature of the house is a great group of chimneys. There are six in a row at one place and divers tall chimney pots at either end. A narrow little entrance way flanked by heavy oak benches leads to the front door. Inside the beautiful old house there are enormous squared oak beams, like the timbers of a ship, rich dark oak paneling and dozens of windows with old leaded panes.

On the whole, the people of the countryside appear to be anything but acutely conscious of the presence of the distinguished author in their midst. He is a legendary figure of little importance to many of the old inhabitants. 'Mus Kipling? Yes, I've seen him walking with his dog,' is the noncommittal reply of many. Others first learned of his importance to the outer world when he was ill last winter and the town was suddenly crowded with newspaper reporters. Only from the 'Corporal' and a few other old codgers did we learn anything of a positive nature.

ONE morning before breakfast when the heavy frost was still on the ground I walked down the hill from Burwash to a little bridge over the brook below Bateman's. There I met the Corporal, who came by this title, I learned, because of his former service in His Majesty's Army.

The Corporal was resting a heavy bag on the parapet of the bridge. His beard was long and scraggly and white. His old coat was tied together with string. His boots were heavy and muddy, he wore big mittens and carried a heavy staff. But his face was as rosy as a prize apple and his eyes twinkled merrily under bushy white eyebrows.

After a few remarks had been exchanged regarding the fine weather, conversation turned naturally to the subject of farming. And although the Corporal's accent made him difficult to understand, I soon gathered that the ancient industry of agriculture, here, as elsewhere, was in a bad way. Pointing to a nearby field of hops, he told me that in better times much more of the land had been used to raise this aromatic vine for making beer and ale.

'The farms here have all gone to pot since these farmers' alliances and unions,' the stanch old Corporal declared. 'The land ain't half farmed any more.'

He pointed out certain well-kept fields and meadows across the bridge and said they belonged to 'Mus' Kipling. I saw several new farm buildings and, some distance beyond, the huge roof of Bateman's with its reeking chimneys. In one of the meadows were sheep bearing a large red K on their flanks.

Apparently the Corporal had no respect for Mr. Kipling as an agriculturist, for he immediately began to pick flaws in the author's farm, buildings and methods. The new buildings near the bridge first fell under his displeasure. 'He has put up a lot of new buildings,' the old rover declared. 'I don't understand why he needs such —— big houses! The old ones were good enough.'

'Isn't Mr. Kipling a good farmer?' I asked after he had informed me that the sage of Sussex owned about two hundred acres in this vicinity.

This innocent question released a flood of scorn. For fifteen minutes the Corporal enumerated the shortcomings of Mr. Kipling, closing his tirade with the statement that he was a 'rotten farmer' and that he would like to have a chance to talk to him alone for an hour, to tell him all he did not know about farming.

CONTINUING on this subject, the Corporal said that Mr. Kipling was a difficult person with whom to do. He proved this by pointing out that the writer could not keep help, his foreman having been the last to leave the farm summarily. The fact that the 'fancy' farmer had a foreman, a steward, a secretary and many retainers excited his ire.

When I queried whether he had read any of Mr. Kipling's books, I was shocked to hear him answer that he had, but considered them 'rot.' He insisted that he was a judge of literature, when I remonstrated, on the ground that he had once been an actor and had played the rôles of David Copperfield and Oliver Twist. 'Those be good parts,' he declared, dismissing Kipling and all other modern *litterateurs* in scorn.

Regarding Kipling's Sussex fairies the Corporal seemed to have some doubt. There might be and there might not be fairies, was his opinion, but he added that he had seen many queer things in this country.

'Well, got to be going,' the old man concluded as he shouldered his heavy bag. 'These be chips for my fire,' he explained. 'Chop the chips short and hang the pot low, I say,' was his parting shot as he started up the hill toward the village, leaving me to ponder on his strange attitude toward a great man.

FOR three days I tramped about the countryside gossiping with the workers in the hedges along the quiet lanes. From them I learned that the author enjoys little fame among the peasants of the countryside for his writings and they are not quite ready to accept his newfangled farming endeavors. In fact these hoary gray-bearded old fellows look at Kipling as somewhat of an upstart and newcomer in the vicinity. It seems that it takes more than twenty years, in fact a few generations, for a name or a reputation to take root in Sussex.

According to the local people Mr. Kipling is not often seen. This has been true particularly since his illness last year. I caught but a single glimpse of the some-

what stooped, but seemingly vigorous poet, as he walked swiftly along a road with his faithful dog.

There in the Sussex country which he now appears to love so dearly that any threat of intrusion on his solitude unnerves him, it indeed seems a long way to India, scene of Kipling's unregenerate younger days when he sang so sanguinely about swanking, swashbuckling soldiers and put Mandalay on the map. There it is easy to understand how sleepy Sussex has superseded the spell of the tropics, and how fairy tales and philosophical verse have succeeded the bellicose chants of his youth. In fact 'Gunga Din' and *Puck the Fairy* seem farther apart at Burwash than they do in any collection of Kipling's works.

From the evidence collected from the people of the country where he is now spending the autumn of his life, the great exponent of British nationalism and imperialism is anxious to get his feet firmly planted in the mud of Sussex and little more. He seems to want to shrink into the quiet scene and become identified with it. Has he not written—

> 'I've given my soul to the South-
> down grass,
> And sheep-bells tinkled where
> you pass.
> Oh Firle an' Ditchling an' sails
> at sea,
> I reckon you keep my soul for me.'

But why, now that he sets himself up as a farmer and country gentleman, does he not absorb some of the peace that surrounds him? Why does he snarl at a debt arrangement entered into by his cousin, Premier Stanley Baldwin? Why is he cross with the careless people from the city who come for a short day in the country he thinks so beautiful, rousing him to write:

> 'They string a clamorous Magic
> To fence their souls from thought.'

The answer seems to be that Mr. Kipling having found peace is determined to preserve it for himself alone. He wants not to see heedless city dwellers who cannot ponder long over *his* beauty, when he starts for his morning walk with his dog. Nor does he appreciate the penetration of contentious ideas into his quiet house, where there is no telephone. The world irks him. He would hold it at arms' length, and when it intrudes in person or principle, objectively or subjectively, his old bellicose spirit rears its ghostly head and the intruder gets scotched in biting verse.

Mr. Kipling, I conclude, has become an 'ochlophobist,' a person, according to the Oxford dictionary, 'who has an aversion to a crowd.'

The Comedy of Cross-Purposes

(*Continued from page 5*)

would have made wonderful copy out of an enthusiastic utterance on behalf of the Drama. It was an utterance which would have won the hearts of the public, and the brains of the conservative ones who think they are not the public, because of the man who expressed these sentiments.'

'I feel that the public is already won to the Drama,' said Mr. David. 'I think the developments of the past few years have convinced managers that there is one type of theme, one kind of play, one style of picture, which is sure of overwhelming success. More and more we are turning to that, though of course a few will struggle on in the old ruts.'

I asked by mute attention for further explication.

'THE mission of the Stage,' said Mr. David, 'is religious. We rejoice to recognize this after the success of *Ben Hur*, which was first a phenomenally successful novel, then a tremendously profitable play, and since has been presented with magnificent results in the pictures. You notice that great success can come to a picture or a play when there is nothing religious about it except the name, as in the case of *The Four Horsemen of the Apocalypse*. The great magnates still turn to classics and popular novels for run-of-the-mine pieces, but their big efforts go out in such productions as *The Miracle*. In the very motion picture theaters an awe begins to gather around a man who has been deemed worthy to portray Jesus of Nazareth.

'My press agents, of whom you speak—all college men—have remarked that the theater began in religion. Yes, they have written articles for *The Christian Review* and *The Bible Monthly* setting forth how the Greek drama began with the worship of the gods, and the plays of the Middle Ages were first given in churches in connection with religious festivals. Well, I have been too busy organizing my circuits to go into that kind of study, but—I can see this: If the stage began its career as a church annex, its best policy is religion! So there are hundreds of men in New York, Chicago, London, and every other city, who are busy at this moment planning and writing religious plays.

'The Drama is returning to its place. There will always be a great many shows which are not religious, and some which are irreligious or even anti-religious. Some, of course, will be merely educational. But the great play is the religious play, and the Drama is at its best, not when it tries only to picture the evil in the world, but when it shows, as well as it can, that there is another world, and that there is a God, and that mere education and mere amusement don't count for much.'

MR. DAVID had walked along with me and turned the corner. I was back where I had met the Reverend Mr. Cotton.

'I can see that Religion, Education, and Drama are great forces in civilized life,' I remarked.

'They are,' said Mr. David, 'especially Religion.'

'And any man,' I went on, 'must give his whole life to his calling. Therefore a man must give his main thought to Religion, or Education, or the Drama, or to any other calling which may be his.'

'Yes, indeed,' said Mr. David. 'The other day I met with my noonday lunch club, and sat with Mr. Cotton and Mr. Mann, you know them. We all agreed that the best work is done in any state of society when each man sticks strictly to his own line of work, without interfering with and bungling the activity of others.'

LEARN
to
DANCE
and Keep Young

The Old American dances as revived by Mr. and Mrs. Henry Ford have created widespread interest

To render it possible for everyone to enjoy these beautiful dances there has been compiled and published, under Mr. Ford's direction, complete information and instructions on each of the dances as taught in the Ford School of Dancing at Dearborn, together with calls, music and pictures visualizing different steps.

'Good Morning'

is the title of this interesting book. It contains 169 pages, carefully printed in clear type, and durably bound in attractive paper covers

It also expains the origin and etiquette of the dances; Style and deportment, and how to arrange and conduct a successful dance

Readers of THE DEARBORN INDEPENDENT are now given an opportunity to obtain a copy of this popular book free. It regularly sells for 75c a copy, but for a limited time we are offering a copy of *'Good Morning'* in return for obtaining a new subscriber for THE DEARBORN INDEPENDENT.

Thousands of men and women are just waiting to be asked to subscribe to this great publication. Many of them are your own friends and neighbors. All you have to do is to secure one new subscription and forward it on the coupon below. We will immediately send you a copy of *'Good Morning'* with our compliments.

CHATS WITH OFFICE CALLERS

'I went to the cosmetics department of a big store,' said ***an Obedient Husband,*** 'because my wife asked me to get her some face powder. She gets two kinds, two shades, and mixes them with some mystic rites of her own. When I began to negotiate with the charming young lady at the counter, she seemed quite determined to sell a single package of an entirely different shade. When I held firmly to my instructions, she remarked, "Our men customers nearly all use this." And then I realized that she thought I wanted the face powder for my own beautification.

'It seems, from what I could learn that morning, that while men no longer have a monopoly in the consumption of tobacco smoke, men are acquiring powder puffs, rouge, lipsticks, and particularly face powder of the brunet shade. My grandmother says that at least one of the sexes should wear long hair, and the present situation makes me wonder which it will be.'

ɣ ɣ ɣ

'In Spain one is immediately and constantly impressed by the good nature of the Spanish people,' said ***the Globe Trotter.*** 'The politeness is more than formal, being friendly and cheerful. The Spanish sense of humor is quite similar to the American. No matter what peculiarity of language or dress the Spaniard observes in the foreigner, he has always the feeling that the amusement is mutual. An American woman is an object of interest to the *senorita* with her high comb and mantilla, but the *senorita* immediately appreciates that she likewise is an object of interest to the American.

'Distinct and clear enunciation is a virtue in the Spanish people. In directing a stranger the policeman speaks slowly and distinctly so that the slightest familiarity with the Spanish numerals enables one to get the directions.

'The ordinary rules of sanitary treatment of food are followed more closely in Spain than in the Latin-American countries. This is evidenced by the wider use of package goods, by the substitution of tongs for fingers, and by a more careful washing of dishes. One has a more comfortable frame of mind when dining.

'In numerous ways Spain is making the effort to learn of the advances being made in other countries and she is trying to adopt the best. Spain is coming along.'

ɣ ɣ ɣ

'Books need critics,' affirmed ***the Eminent Litterateur,*** as he launched forth on one of his favorite themes. 'The idea that a man cannot write, so he criticizes, is untrue. A true critic has creative power, but it takes a different form from that of the book writer. He must be a person with wide literary background, and he must be more just and more analytical than the average person.

'A book is an idea. Frequently, in the process of writing the book, the author loses track of the idea. It is the function of the critic to discover the idea, to find what the author wanted to do, whether he did it, and if he failed, why. He is the midwife of the book, but unfortunately he is rarely called in until after the child is born.

'Yet it is an unpardonable mistake for the critic to tell the author how he should do his work. It is futile in any case, for authors are notoriously obstinate; and their obstinacy is justifiable, for after all, it is their idea, and they alone can work it out. Most manuscripts could be improved by condensing. That condensation the critic may safely indicate.

'The reader, too, needs the critic, for, after all, readers are part of books, and most of us understand only about sixty per cent of what we read. It is the duty of the critic to raise that sixty per cent to eighty or eighty-five per cent. The cradle must be warmed for the book, and that is the province of the critic. For example, Conrad's recognition came rather late, and as a result of the right kind of critics. He had been writing for years, before a group of critics, his friends and admirers, explained painstakingly to the public his new study of the psychology of men on the sea, in woods, and in new environments. In other words, the critics pointed out to readers what to look for. And it is a natural consequence that when critics prepare readers for the author, it enables the author to do better work.

'Unless the real critic functions, the pseudo-critic, or ballyhoo man of the literary world, will fool the public. The critic should either puncture the bubble, or help it along. In short, the value of fair-minded and intelligent criticism is that it holds the exploiters in check.'

INDEXES *for VOLUME 26 of THE DEARBORN INDEPENDENT, covering the period from October 24, 1925, to October 16, 1926, are available. The supply is limited. The price is ten cents a copy.*

ɣ ɣ ɣ

The Newspaper Correspondent who has seen much service abroad came into the office with a clipping about China. 'Here is a paragraph,' he said, 'which reveals a whole lot about the situation there, in a very few words. It says: "The Southern soldiers generally refrained from looting when they reached Hangchow except in the homes of foreigners. Such places were sacked."

'This anti-foreign sentiment is one of the important features of China's civil war; and it is the one thing on which all factions agree. Hatred for the foreigner in China is growing, and ten thousand marines in Shanghai, or even a hundred thousand, can't stem it. Fair and honest treatment of the Chinese by the world powers is the only thing that can, and even then it will take years for the feeling to die out. Responsibility for the dislike rests directly upon the foreign nations, and upon the foreigners resident in China. The latter reflect the overbearing attitude assumed by their home governments, and do as much as any other single agency to stir up trouble.

'The attitude of snobbish superiority assumed by many of the white residents is almost unbelievable. The Chinese are treated by many, particularly by Europeans, not only as an inferior race but as scarcely human beings at all. Their contempt for the natives is expressed in many ways in harsh treatment often amounting to brutality, in ignoring and ridiculing the rights and sensibilities of the Chinese, in regarding the lower classes as little better than beasts of burden. One man stands out particularly in my remembrance of the last time I was in China, about four years ago. I'll call him Captain Jack, and I regret to say that he was an American. His way of getting things done was to kick or cuff or whip the particular Chinaman who happened to be working for him. Many a time I have seen a native gaze back steadily at him from under a shower of blows—and gaze not in humility or even in rage, but in a cold, calculating way as though to say, "My day is coming some time; *and then you had better look out.*" That day may be *now.* Of course, Captain Jack isn't typical of all foreigners, but there are enough like him to account for the bitter feeling. And that feeling is finding its outlet.'

ɣ ɣ ɣ

From ***the Wife of a College Professor*** at the University of Nanking comes a letter shedding additional light on the Chinese situation: 'We are expecting the Southern army to take Nanking as well as all this section of China in the very near future. The sentiment is so strong in favor of the South that the gates will probably be opened to them here. We have been wanting China to develop a national spirit and it is growing so fast, and has been ever since the May thirtieth incident, that it keeps us running as fast as we can in order to keep up. Occupation by the South always means strikes and rather a hard time for foreigners, but we feel it is the only hope in sight. The Northern soldiers are unbearable. Of course, you know that the Christian general (Feng) is on the side of the South and is again coming on the scene from the northwest, and, by preventing the entire Northern forces from being thrown against the South, may bring a more speedy victory. We all feel the South will eventually win, unless something unforeseen occurs.'

ɣ ɣ ɣ

'Fifty per cent of the people, by actual count, change their status every year,' said ***the Advertising Man.*** 'A man may be in the market this year, and out next. A family may be out of the market for a certain commodity this year, and in next. Aside from the real necessities, there is an annual fluctuation of half our population, considered as purchasers. How does it come about? By the simplest kind of process. A baby is born, and the expense may put a family back a year as to the purchase of a car or a high-priced radio, or a refrigerating machine. Or a boy may have finished his college course, which releases the family from that expense, and allows it to consider using the money elsewhere. We estimate that every boy who finishes his college course releases his family to the extent of $1,000 a year to be spent on other things. In the case of farmers, a good year enables them to be good customers, a bad year changes their status to that of poor customers. And that is how it comes about that half our people change their purchasing status every year.'

Climbing Mount Baker

(*Continued from page 15*)

ame to a point where another line of re-rning tracks could be seen branching off oward the ridge of rocks on our right. We ust, we knew, be near our objective. We reasted a short slope of steeper snow and ere it was. A chasm fifty feet across with ertical walls of pure white ice, more than irty feet high, cut like an enormous ench across our path. It seemed unending right and left. Here the tracks which we ad been following waltzed about over a nall area and then turned downward again.

The only possibility of access seemed to e offered by a weakness in the opposing all some hundred feet to our left. To cut eps up such a wall would be a task re-uiring at least two to three hours if it ere possible, which was doubtful. A really rmidable work of excavation would be equired. However, it seemed worth while look closer. It was without any decided nticipation of success that we wandered a higher point on the left to survey the bstruction to better advantage. The esult was a thrilling anticlimax. Less than enty yards beyond our former limit of ision the great impassable chasm suddenly arrowed to nothing. Just at the point here it left off, a brother chasm, even rger, opened, but between them, athwart ie obstacle, lay a neat connecting gangway bout as wide as a garden path and as easy follow. A short detour soon put us upon it.

We felt sorry for the party who had been ere before us, when we reflected that they ad been defeated by a difference of only me ten feet in their line of vision. It is in ttle encounters such as this that depends ie success or failure of mountain expedi-ons. One has to investigate the seeming ifficulty, before he can be certain it can e called one.

Above we made rapid and care-free rogress. Our way wound continually be-veen vast trenches and led us steadily steeper slopes. As we mounted, the azure the exposed facets of ice took on an even velier purity. Not to stand entranced by ie unearthly beauty of some of these ice asses seemed a desecration. But time essed. The slopes above were more steep, e could see, all the way to the lip of the ateau, and the final reaches might be ry slow work.

A light snowfall of the week before had vered the slopes with a crisp carpet into hich the spikes of our crampons could bite ith perfect safety; but at a steeper angle is snow might well be powdery, and, if , it would have to be cleared away and a ep hewn in the ice below. Time passes ickly in such labor, our rate might easily ow down to less than one hundred feet hour; and the nearer we came to the last all the taller it grew!

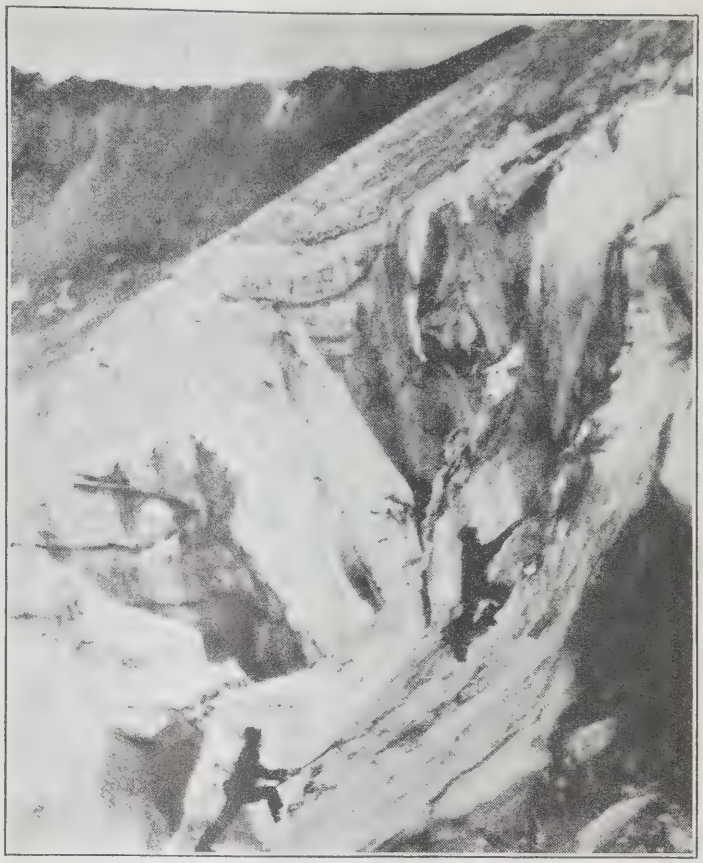
Mountaineering is full of a subtle, con-aled drama. The great peaks constantly reaten difficulties which vanish just when ey seem most serious, a compensation rhaps for the awful suddenness with hich they can loose bolts that strike from clear sky. We had crossed the last cre-sse and were well launched upon the al wall before we knew whether it was ing to yield us an easy staircase or compel to call out all our reserves. For the snow at first did what we had feared. It turned powdery for a few yards and steps had to be cut through it into the solid ice. The angle of the slope was far too high for any risks to be taken; a slip would have terminated, long before the party could have checked itself, in the blue-black depths of a lovely but sinister crevasse that gaped below.

Just as we had braced ourselves for a very toilsome and difficult hour, the snow at this point grew deeper, and moist enough to bind under the foot if carefully and repeatedly trodden down. Thus treated the fragile stuff will form steps up which the climber may walk with perfect confidence. How the heart lightens at such moments! The sky seems more cheerful, the distance to be covered shrinks, fresh energy wells up in mind and body. We were not long in climbing what remained of the slope.

A low belt of rocks juts out of the snow just below the plateau. As we crossed them we remarked with some astonishment a long, thin piece of sash line tied to them and hanging loose, not far distant. It looked white and frail as though it might have been there for many years. The first party and probably the only other party to climb the mountain by our route descended in their own tracks. That was in 1906. Doubtless they fixed this piece of rope to aid them in their descent. To think of it swaying there aloft on that unvisited slope in the winds of twenty years gives one an odd and not unpleasant thrill. It seemed to add something to the wildness of the mountain rather than to take away from it.

All day long streamers of white harmless cloud raced across the summit plateau, coming a little lower as the hours passed and sometimes swathing the upper one thousand feet of the mountain. We had anticipated a cold wind in the final stages of our ascent, and now as we made the last few steps and swung ourselves over the sharp edge to the comparatively level ground above, it was a pleasant surprise to find only a moderate breeze blowing and the mist which enshrouded us shot through and through with sunlight.

A ghost of a sun now and then sailed wildly through the white scud that blew by us, and, as we mounted over a rough, hard-crusted surface of glittering snow compacted of delicate frost feathers and fast frozen hailstones, we could feel ourselves coming more and more out of the upper level of the cloud and into the sunlight. A little later we were standing on the dome-shaped summit looking out in all directions over a broken wilderness of cloud masses pierced irregularly by the black outlines of lower hills.



The peaks threaten difficulties which vanish when they seem most serious.

It was too late to stay long on the summit. We decided to take the comparatively quick descent by the regular route. There is a peculiar pleasure in thus *traversing* a big mountain. To come down from the world of the snows into new country, which one has never seen or visited, is to participate in the quintessence of travel. A fanciful person can almost feel himself a stranger to the earth, entering upon a fresh cycle of existence like a visitor from another planet.

THE descent was rapturous; a few minutes ambling over the undulating summit plateau, then a sudden turn round under a shoulder and one finds oneself trotting diagonally down across an immense, gently tilted slope of snow, evidently on a slope of soft volcanic dust. Here and there the foot strikes through and the snow is stained for some yards by the earthy footprints of the man ahead. A thin crisp film, lying on the surface of the snow sheet, is torn off by one's strides and slips in a whispering, hissing stream beside and below. Halt a moment and the whole slope seems alive with its sibilant slither. A very few minutes of this easy progress and the lower peaks of the mountain rise up as by magic and encircle one. A soft, earthy ridge continues the transformation. By the time it is necessary to stop running down the slope and take to the glacier, one is out of the upper world of cloud and sky and back in the labyrinthine regions where the problem is less one of getting up or down than of making clear headway.

CAN YOU TELL ME?

Question: Does the Government have a Coast Guard Academy on the western coast of the United States? Is there an oversupply of officers from these academies?

Answer: The Coast Guard maintains and operates only one academy, located at New London, Connecticut, which trains young men as cadets for commissions in the Coast Guard. There is not an oversupply of officers in the Coast Guard, the number of places being fixed by law. The number of cadets to be appointed each year is based upon the requirements of the service. The next examination for the appointment of cadets will be held from June 20 to 25, 1927. For further information write to The Commandant, U. S. Coast Guard, Washington, D. C.

* * *

Q.: Please give me some information regarding the sinking of the Lusitania. Was it carrying contraband of war?

A.: The *Lusitania*, a British Cunard liner, was torpedoed and sunk by a German submarine, ten miles off Old Head of Kinsale, on the southwestern coast of Ireland at 2:05 p. m., Friday, May 7, 1915. She left New York, May 1, commanded by Captain W. H. Turner, with a crew of more than 600 and 1,250 passengers, among them 188 Americans. Her cargo was valued at $740,000 and consisted of copper articles, brass, furs and small-arms cartridges, but no guns, high explosives nor loaded shells. She sank about twenty-one minutes after being struck by the first torpedo. The total death roll amounted to 1,154, of which 755 were passengers, 114 being Americans, and, in addition, there were 35 infants. The German claim that the *Lusitania* carried guns was disproved by American officials of the port of New York who inspected the ship before her departure. The Federal District Court of New York, in a decision written by Judge J. M. Mayer and filed August 24, 1918, held that the vessel was unarmed and carried no explosives of any kind.

* * *

Q.: What are the names of the present members of the President's Cabinet?

A.: Frank B. Kellogg, Secretary of State; Andrew W. Mellon, Secretary of the Treasury; Dwight F. Davis, Secretary of War; John G. Sargent, Attorney-General; Harry S. New, Postmaster-General; Curtis D. Wilbur, Secretary of the Navy; Hubert Work, Secretary of the Interior; William M. Jardine, Secretary of Agriculture; Herbert C. Hoover, Secretary of Commerce; and James John Davis, Secretary of Labor.

* * *

Q.: Was Dred Scott ever set free?

A.: The United States Supreme Court decided against Scott in March, 1857, but the whole question was soon decided by the war. Scott and his family were inherited by Calvin S. Chaffee of Massachusetts, were conveyed by him to Taylor Blow of St. Louis for emancipation and were given their liberty May 26, 1857.

Q.: Please tell me the Presidents' pictures found on the various stamps.

A.: The stamps of the regular issue of 1922-1926 which have the pictures of Presidents on them are as follows: 1 ½c, brown, Harding; 2c, carmine, Washington; 3c, violet, Lincoln; 5c, blue, Roosevelt; 6c, orange, Garfield; 7c, black, McKinley; 8c, olive, Grant; 9c, pink, Jefferson; 10c, yellow, Monroe; 11c, peacock blue, Hayes; 12c, purplish brown, Cleveland; 13c, green, Harrison; 17c, black, Wilson.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

Q.: Where are the United States naval training stations located?

A.: At Hampton Roads, Virginia; San Diego, California; Great Lakes, Illinois; and Newport, Rhode Island.

* * *

Q.: By whom was Abraham Lincoln defeated in his first race for the legislature?

A.: The fortunate candidates for the Illinois State legislature in the 1832 election were E. D. Taylor, J. H. Stuart, Achilles Morris and Peter Cartwright, the first of whom received 1,127 votes and the last 815. Lincoln obtained 657 votes, receiving almost the unanimous vote of his own neighborhood, the precinct of New Salem, 277 votes against 3.

* * *

Q.: For what public offices was Abraham Lincoln a candidate and was he successful in all the political races he entered?

A.: In 1832 Lincoln was an unsuccessful candidate for the Illinois state legislature but was successful in the 1834 election and was thrice reëlected. In May, 1844, Lincoln lost the Whig nomination for Congress to Edward Dickinson Baker who was elected in August of the same year. His one election to Congress occurred in 1846, his term ending at the inauguration of President Taylor, March 4, 1849. In the spring of 1849, Lincoln, at the request of some of the leading Whigs of his state, was a half-hearted applicant for an appointment, at the hands of the President, for the office of Commissioner of the General Land Office, but did not receive the appointment. In November, 1854, he was elected to the state legislature of Illinois but resigned his seat that he might become a candidate for United States Senatorship from that state, the Senator from Illinois at that time being elected by the state legislature. This election in 1855 Lincoln lost. Douglas defeated Lincoln for the United States Senatorship in 1858 for the six-year term beginning March 4, 1859, by receiving the vote of every Democrat in the House, fifty-four members, while Lincoln received the vote of every Republican, forty-six members. In 1860, Lincoln was elected President of the United States on the Republican ticket and reëlected in 1864.

* * *

Q.: Where can information regarding British soldiers who served in the Revolutionary War be obtained?

A.: Write to the Keeper of Public Records, Rolls House, Chancery Lane, London, England, for this information.

* * *

Q.: Please inform me as to the number of mules and horses in the United States in 1900, 1915, 1920 and 1925.

A.: Figures for 1900 and 1915 are not available but those for 1910, 1917, 1920 and 1925 are as follows: Horses, 1910, 19,833,113; mules, 4,209,769. Horses, 1917, 21,126,000; mules, 2,915,000. Horses, 1920, on farms, 19,766,000; in cities and villages, 1,705,611; mules, on farms, 5,427,000; in cities and villages, 378,250. Horses, 1925, 16,554,000; mules, 5,758,000.

* * *

Q.: Our American history class would like to know of an event that occurred in 1654.

A.: The whole of Acadia was subjugated in 1654 by an English force from Boston under command of Major Robert Sedgwick of Charlestown and Captain John Leverett of Boston. Peace was effected between the French and the Iroquois also in 1654 and traders again appeared on the upper Great Lakes, and Indians from thence on appeared at Montreal.

* * *

Q.: Did any Speaker of the House ever succeed to the Presidency?

A.: No. Under the Constitution, Congress may provide by law for the case of removal, death, resignation or inability, both of the President and Vice-President, designating what officer shall then act as President, and, by a statute passed March 1, 1792, it was enacted that in such a case the president of the Senate, or, if there should be none, the Speaker of the House, for the time being should act as President until the disability should be removed or a President should be elected. This statute remained in force until January 19, 1886, but the contingency provided for never occurred.

* * *

Q.: What was the extent of the witchcraft persecution in America?

A.: All the American colonies had laws against witchcraft similar to those in England at the time and from the first there were occasional trials and executions on that charge. The great Salem witchcraft delusion occurred near the close of the 17th Century. Fifty-five persons suffered torture and twenty were executed before it ended.

BRIEFLY TOLD

THE PIANO WAS INVENTED about 1710 by Bartolommeo di Francesco Cristofori, an Italian.

WITH A COLLECTION of 2,500,000 specimens representing 113,000 species, the Smithsonian Institution in Washington qualifies as the world's largest bughouse.

NEW YORK CITY has more than one hundred buildings that could be termed skyscrapers.

A WHALE SHARK has 24,000 teeth set in eighty rows of three hundred teeth each.

THE LARGEST BALLROOM in the world is to be built in Chicago. Its construction will cost more than one million dollars and it will provide for 7,500 dancers.

DURING 1926 IN Premier Poincaré's home department of the Meuse in France it was unnecessary to hold a single session of the criminal court.

A MAN IN South Africa has just papered his room with 500,000 used postage stamps.

A MOVEMENT IS UNDER way in Japan for the passing of a law permitting women to be admitted to the bar.

KING GEORGE OF Great Britain has adopted the style of wearing violets on his lapel, held in place by an elastic band sewed to his coat.

KENTUCKY CLAIMS America's prize fat boy. Meredith Taylor, four and one-half years old, weighs 125 pounds, wears size 42 overalls, a size 17 shirt and 7½ cap. Almost as broad as he is tall, he is still growing.

A HOG WITH TWO hearts was butchered at Berkeley Springs, West Virginia, recently. The main heart was normal in size, shape and form. The other was about the size of a hen heart, had the same characteristics, connected at the same place as the larger heart, and lay at the side of the larger organ.

LORNA DOONE NEVER lived and the romance of that name was founded on a myth, according to research workers.

THE 3,000 B. C. gold was embellished with silver because silver was then considered more valuable than gold.

SMALLPOX WAS KNOWN in India in 2000 B. C.

THERE IS NOTHING IN the Koran which orders that women should be veiled or that they should not receive education.

LESS THAN ONE PER CENT of the beef produced in this country is exported.

FIFTY-SEVEN YEARS AGO an American tourist, climbing Mont Blanc, threw his pistol away during a blizzard. The pistol has just been found in a shallow stream at the foot of the glacier.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses interest in life as related to one's work and leisure.

The cover design of this number is by Irving R. Bacon. It represents one of the phases of the process of converting ships into motor cars: a panorama of shipbuilding, but a panorama reversed, starting with a completed ship and ending with a husk.

From keels to wheels well describes the series of operations transforming the vessels purchased by the Ford Motor Company from the United States Shipping Board into vehicles that will travel the highways in place of the waterways of the world. (p. 1)

A vivid narrative of scenes that Joseph Pennell would have delighted to depict has been written around this titanic demolition of ocean craft and the passing of them on to the furnace to provide material for the most modern land transportation. (p. 1)

Rudyard Kipling boasts that he is un-interviewable, and that newspapermen may look out for modern equivalents of man-traps and spring-guns if they attempt to violate the sanctity of his home farm in the south of England. (p. 3)

But something even better than a more or less stereotyped talk with Kipling has been furnished by Howard White, who, while not actually bearding the literary lion in his den, mixed with the denizens of his domain and found that the king of letters had at least one tender spot. (p. 3)

Whether judicious budgeting should run to ornate house furnishing or a refrigerator filled with wholesome food is a question which Mary Willis Shuey takes up with the reader. Mrs. Shuey has a practical mind and practical experience and her conclusions are full of enlightenment. (p. 4)

The topsyturvydom that seems to prevail in certain directions in connection with the functioning of churches, schools and theaters is well illustrated in Charles D. Cameron's story. (p. 5)

Vast as is the sum spent for peaceful endeavor and largely profitable as it is for those who lend, the lenders are not satisfied and require that the people furnish still bigger returns. War loans provide the means for this; it is finance carried to its highest power, for people spend many times more for war than they would do in the same period for peace. (p. 6)

Lent is the season when people are supposed to think more and eat less. The right kind of mental pabulum for this season may be hard to select, but 'Reading in Lent' may help. (p. 8)

There is more about Mary's little lamb this week. Research has given us additional reminiscent lore establishing this supreme epic of childhood more solidly than ever. (p. 12)

Dorothy Pilley, of the Ladies' Alpine Club, England, is the first woman who has ever succeeded in climbing Mount Baker, Washington, by the northeast face. Miss Pilley tells the story. (p. 14)

'The Happy Optimist' is the title of another short story by Hugh Walpole. Human interest is judiciously blended with flashes of humor. (p. 16)

Here are some opinions for and against prohibition:

Galeton, Pennsylvania.

A short time ago 'Mr. Ford's Page' contained a statement to the effect that there is not now as much drinking among the young people at social events as before prohibition lined up among our legislative mistakes. This is not so. In the old days the young fellow who went to a dance full of liquor had to pretty well disguise the fact if he wished to obtain partners for the dance. Now many of the young ladies won't dance with a young man unless he has a bottle on his hip. In other words the exception has become the rule.

My second suggestion is that you use the columns of the INDEPENDENT to fight the growing tendency of the Federal Government to usurp the power of the individual states. Where conditions in the various states are so vastly different, the uniform cut-and-dried formulas of the central government too often fail of their purpose.

Let the states govern themselves as intended by the Constitution.

J. F. BENSON.

Ponsford, Minnesota.

We have been very much pleased at the stand you have taken on the prohibition question. The breadth and strength of your arguments have surely been very inspiring. The following is a short article I wrote for our local paper:

'We cannot understand why there should be so much petty personal bickering as to when, where, how, or why the Volsted Law got to be a part of our Constitution; the great fact exists that it is there, and in our opinion the great question at this time for every honest mind to decide is simply this: "What are the natural fruits of its requirements?" Does personal abstinence from alcohol drinking promote virtue or vice, poverty or wealth, happiness or misery, ignorance or education, industry or indolence, and, last but not least, charity or oppression? Upon this ground and this alone we claim that every true American citizen should honestly and conscientiously determine for himself whether or not the Volsted Act is an honor or disgrace to one of the greatest human documents in all the world, the Constitution of this United States.'

J. W. NUNN.

San Diego, California.

While I do not agree with all your opinions and statements, your analyses of national issues and fearless dissections of subjects which are of vital public interest are intensely attractive, and impart knowledge to me which I seldom find in other periodicals of any description.

More power to the naked and neglected truth.

ROBERT A. HOWARD.

HOWARD WHITE was formerly in the American Consular Service, stationed in the Azores. He is now a writer with the North American Newspaper Alliance and is resident in London, England. Mr. White is a keen observer and a concise and interesting writer.

MARY WILLIS SHUEY lives in New Orleans. She is an authority and prolific writer on things Southern. Her articles on Southern cookery and on the welfare of children and other subjects that appeal particularly to our women readers have appeared from time to time.

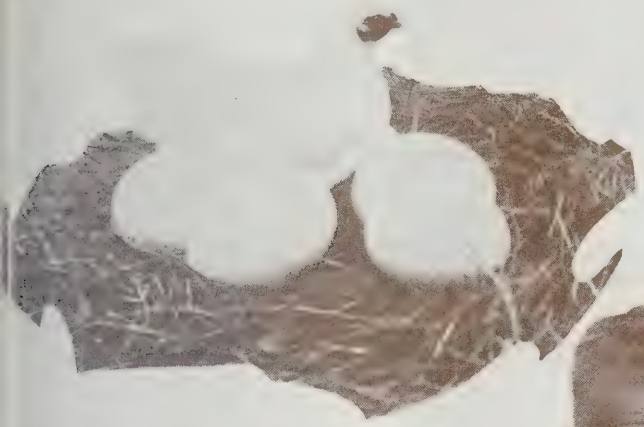
CHARLES D. CAMERON is a journalist and special writer of wide experience. He has made a special study of social problems at close range and his latest contribution to our columns denotes keen observation.

HENRY LAKET, a New Orleans business man of prominence, follows up his former articles on finance with one that shows just where money enters into war-making and war enters into money-making.

DOROTHY E. PILLEY, of the Ladies' Alpine Club, London, England, has established a wide reputation as a mountain climber and writer on mountaineering. Her writing has that vivid touch that only personal experience can give.

HUGH WALPOLE, the eminent novelist, is just concluding a successful lecturing tour in this country prior to returning to England. Other short stories from his pen will appear in our columns.

Curious Incidents *From the* Animal World



This white Leghorn hen in a zoo barnyard discovered a nest of five ostrich eggs. With typical maternal instinct, she attempted to hatch them, but finally gave up in despair.

—Herbert Photos

The goat has for all time been regarded as the emblem of everything that is evil. None the less fascinating is this Himalayan Tahr, a shaggy-haired brown wild goat characterized by short, triangular, sharply keeled horns. That it is sure-footed and somewhat of a climber is evident from this picture.

—H. Armstrong Roberts.

Below—

Newark, New Jersey, is proud of her 'Jack the Hugger,' a baboon whose chief delight is in hugging little puppies. This pet poodle looks a trifle bewildered, but apparently is resigned. *—Herbert Photos.*

Center—

'The Cowboy of the Sea' captures turtles and fish with no paraphernalia other than his bare hands. This 400-pound turtle he brought ashore after a strenuous battle. *—Herbert Photos.*

Left—

'Ponchartrain Billy' is 'Teddy's' favorite taxi. At an alligator farm in Los Angeles, this big collie, 'Teddy,' cares solicitously for a family of baby alligators, and the saurians respond surprisingly to his devotion. *—Herbert Photos.*

WHERE *Shall I Go* NEXT?

Few Fields Are Left *for the* Explorer; Yet I Look *for* Fine Adventures

The airplane bearing Byrd and Bennett, photographed as it left Spitzbergen on its epochal flight to the North Pole.

By COMMANDER RICHARD EVELYN BYRD, U. S. N.

AFTER I came back from the North Pole last June I had six good offers to go into business. One of these was from a successful advertising man who was a partner in a great manufacturing plant.

'But we can give you $25,000 a year!' he exclaimed, when I politely refused to show any enthusiasm about his business. He acted as if I had been impertinent.

'But I don't want to go into business,' said I.

'Why not?'

'Because I have still some exploring to do.'

He reached out and patted my shoulder in a kindly way, as if to say, 'You poor misguided man.' Actually he said: 'But, Byrd, there isn't anything left to explore.'

Luckily I was equipped to dispute him. I unrolled a chart of the world which I had brought along with me and showed him some of the things that are left for man to do and see and find out about on this great globe of ours.

Of course, my especial interest still focuses in the Arctic. I reminded my friend that there is in the region of the North Pole over four million square miles still untrodden by man and unseen by human eyes. In this vast area may lie unknown continents inhabited by strange animals, even human beings. Think of it: an area larger than the whole United States! And one section (north of Alaska) is over a million miles in extent.

I didn't let my mind dwell too much on outlandish speculations. I tried to remember what Kipling said in his 'If' about not letting dreams be your master. But it is quite impossible to visualize a brand new piece of land without peopling it with everything from prehistoric monsters to giants. Just imagine yourself for a moment in the explorer's shoes and see if I'm not right.

The chief goal of another Arctic flight would be the center of the unexplored area north of North America. Brave Roald Amundsen flew across the Pole but didn't see very much on the American side of the Polar Sea. Mists spoiled his view. Even had it been clear he would have seen only a narrow strip. So it is still quite possible that large tracts of land lie north of Canada near the Pole.

'But what use would it be,' asked my friend, after I had run my finger around the chart several times, 'if you did find some land in that awful iciness?'

'Probably no immediate use,' I confessed. 'For instance, I could not visualize mining coal and sending it south. Yet coal is mined in Spitzbergen and sent to Europe profitably these days. And Spitzbergen is only about seven hundred and fifty miles from the Pole.'

'But you couldn't get people to go and live in that desert place, could you—unless they were a lot of Eskimos?'

I couldn't resist the temptation to sit down and tell him the wonderful story of the lost Norse colony of Greenland. How the Scandinavians built up towns and villages of tens of thousands

of inhabitants back in the 14th Century. How war and pestilence came to Europe and temporarily put an end to all shipping.

How when mariners once more went back to visit the poor colonists they had disappeared. How to this day no one knows what happened to that vanished race. How some scientists have pictured them escaping up the Greenland coast and out to the northwest in an effort to reach Europe through the Northwest Passage.

How, if so, it is quite conceivable they may have discovered a land in the Polar Sea which we have yet to find.

I TOLD him that wonderful yarn. I went on:

'Imagine the sensation of presenting to the world a continent and a race of white people that have been spinning around on the earth with us for centuries wholly beleaguered by ice and snow!'

But he only smiled. I smiled, too; for much as I like the story, I can't let myself put much faith in it.

A great many people looked on last summer's Arctic work as a purely sporting adventure. In the eyes of many Americans we polar flyers were just a lot of circus performers.

In a sense that was true.

You see we were all headed for that big unexplored area north of Alaska. I wasn't sure that I could get there this year so I was interested in flying to the Pole to prove that it could be easily done.

Amundsen not only wanted to get to the Pole but he was keenly curious about the unknown area. Captain Wilkins was closest to the unknown area but he had the toughest proposition when it came to hopping off. He had first to cross the Alaskan mountains to Point Barrow. His tragic disappointments are well known, but not so tragic as to prevent his making a flight again this year.

ALL three of us were successful. This may sound funny, but it is true. I proved that a plane could fly to the Pole and back with great ease and comfort. Amundsen proved that a lighter-than-air vessel could make the flight from Europe over to the neighborhood of Asia and Alaska, thereby establishing the possibility of a transatlantic route.

Wilkins proved, despite his accidents, that an airplane was perfectly practicable in the wilds of north Alaska in the dead of winter. All three of us looked on new unexplored territory and brought back scientific data.

I am also interested in the Antarctic. It is difficult to realize what a vast continent there is down around the South Pole, an enormous area far larger than Europe. Amundsen and Scott penetrated this white desert to its highest point over 10,000 feet above sea level; but their exploration left it as little known as was the great North American Continent in the generation following its discovery by Christopher Columbus.

'WE CAN'T use the Pole now that we've got it,' says Commander Byrd, but the attempts that have been made to reach it have opened up fresh areas for settlement in Greenland, Canada, and Alaska. Every day the world is getting more crowded, and the explorer says there are still large habitable areas.

So my plans for the future are not a little based on quick execution and, if possible, on material success. I mean that further Arctic flights attract me only if they offer possibilities of new land and new people. I don't propose to do any circus stunt over the Polar Sea or the Antarctic region just for the sake of the noise.

ON THE other hand, I am not opposed to stunt flying in the sense of long and difficult flights. I am strong for the transatlantic flight. I believe that a successful flight from New York to Paris will fire other men to establish a regular air line across the ocean. With radio developed to its present perfection, and endurance of our big planes what it is, I think we're going to have such an ocean service in the coming decade.

The trouble with stunt flying is that it so often defeats its own end. (Of course, I mean by stunt flying long flights and not looping-the-loop.) Some one crashes or falls down and floats around in the ocean or burns up, and public opinion says: 'Why do they allow such foolhardy pilots in planes?'

People must not forget that mankind pays a price for every sort of progress. The discovery of the North Pole has cost more than two thousand lives. We can't use the Pole now that we've got it; but the exploration that went into reaching it had a great deal to do with the development of seafaring knowledge as well as the opening up of habitable areas in Greenland, Canada and Alaska. In the same way research in physics has cost many hundreds of lives. Yet today we have the radio, the airplane, liquid air, and thousands of other boons to civilization as the result. The same thing may be said of chemistry, and other branches of science.

So when I hear critics condemn a man for taking chances in order to make some memorable flight, my answer is always: *'In counting the cost consider the bargain.'*

I should like to add that wherever I do go next I shall have something definite in view that isn't tied up with any geographic objective. I want to prove that aviation is safe.

I have three children growing up. I suspect that they will feel a good deal about aircraft as I felt as a boy about a bicycle. You know that our mothers and fathers had a hard time learning to ride a bicycle. When you and I came along, riding a bicycle was more or less natural. We learned the trick in a few hours.

I think that's the way it's going to be about aircraft. The children of today are going to catch hold of piloting and fly just as easily as we got hold of riding a bicycle.

BUT the great deterrent in all flying just now is the danger of it. Nothing helps kill the bogy of aeronautical peril like long flights successfully made. When Sir Alan Cobham flew to Capetown and back and to Australia and back, he advertised to the world that the airplane could on occasion be a pretty safe proposition. I think Bennett and I did that, too, when we flew to the Pole and back.

Now that aerial exploration is an accomplished fact I look to see the maps of the earth soon deleted of their blank spaces. There are not many blank spaces left in the temperate zone. But in central South America and in some parts of Africa there are still large tracts of the interior which have never been visited by white men.

SUCH areas as these no doubt offer greatest chances for commercial reward. New discoveries of diamonds are always possible since diamonds can be formed by the action of heat on carbon. A volcano shooting through a coal bed may well create diamond crystals. It wasn't so long ago when a deposit of platinum almost a mile long was discovered in the Ural Mountains.

Another aspect of future exploration is that of developing inland areas and islands. Our present method of reaching inaccessible spots on the earth's surface by motor transport and portage is both difficult and expensive. Roy Andrews, for instance, lost a whole year when he had to come back last autumn from China on account of civil war there. He could not take his motor caravan through belligerent districts. This is particularly disappointing because he had just discovered first tangible evidence that ancient man resided in central Mongolia.

I look forward to seeing the aerial explorer of the future go out with a small staff and make (*Continued on page 23*)

Goose and Gossip With WILLIAM ALLEN WHITE and SINCLAIR LEWIS

By WILLIAM L. STIDGER

IT WAS goose at dinner, and gossip most of the night that followed. William Allen White was the ost in Emporia, a ypical 'Main Street' own—the kind of treet that made Sinlair Lewis famous.

Ex-Governor Henry Allen was one f the house guests lso.

Mr. White carved he goose. He stood p to carve.

His friend Henry Allen, who is about ne same build as Mr. White, told the crowd story which illusrated, so he said, why Ir. White stood.

The story conerned a fat man who xplained the reason e quit playing golf. aid he: 'When I get ne golf ball close nough to hit, I can't ee it and when I get far enough away to ee, I can't hit it.'

A characteristic ews note appeared n the Emporia *Gaette* that afternoon, eading:

—Alvord Photo.

A pose for the 'fam'bly album'—four who waxed playful in front of the camera: left to right—'Bill' White, Jr., William L. Stidger, William Allen White and Sinclair Lewis.

That tall, handsome red-headed man ou may see going around with W. A. White ese crisp days is Sinclair Lewis, author of *Main Street, Babbitt, Arrowsmith* and other ovels that have been rather violently raised by the *Gazette*. Mr. Lewis and his iend, the Reverend William L. Stidger of ansas City, are visiting the White family. enry Allen of Wichita ran up today to et an earful of wisdom and an eyeful of ie red-headed author.

Emporia has a population of ten ousand, in which the *Gazette*, Mr. hite's paper, has a circulation of ve thousand. It has a Presbyterian ollege and a normal school. It has alt Mason who writes the rippling ymes, William Allen White and the hite household, including Bill White, r., just home from college, with the vowed purpose of settling down in mporia for life as a newspaper editor.

Such is this Kansas 'Main Street.' The only difference between this town and the Gopher Prairie of which Lewis wrote, is that Emporia has William Allen White, and he has built such a fine mousetrap, preached such fine sermons, written such fine books, that the world has made a beaten track to his doorway, even though he has built his cabin in the wilderness of mid-America.

The great of the earth come and go. A citizen of Emporia said: 'Today it is Mr. Lewis, tomorrow it is Jane Addams, or Upton Sinclair, or Charlie Chaplin, or Colonel House—always somebody coming and going. It is our chief indoor sport watching the Santa Fe trains to see who is visiting Mr. White.'

Being a humble follower of both William Allen White and Sinclair Lewis I stood by and listened in on conversation and argument. I felt as if I were tuning in on all the sending stations of the earth when those two met. As Dr. Burris Jenkins remarked concerning Mr. Lewis' visit to Kansas City: 'I felt as if I had hold of an old-fashioned electrical machine, one handle in each hand, a negative and a positive, both going full blast. After that visit, I won't need any electrical treatments for a year.'

Mr. White, in his letter inviting us to Emporia, said: 'If I'm not at the train, don't worry—just wait. I may be off following the fire wagons to a fire.' But he was there, promptly and smilingly.

Mrs. Joaquin Miller once told me about the first time that her husband met Whitcomb Riley. They had both looked forward to the meeting for years. Riley invited Miller to Indianapolis. The train arrived. Newspaper reporters were waiting for the first words of greeting. There were none. Miller put his arms about Riley and the two walked off arm in arm without a word for ten minutes. When asked why they didn't say something, Miller replied, 'What was there to say?'

Not so these two prose writers and novelists. They jabbered away and kept at it with few interruptions for two days. I will have to confess that Mr. White did less of the talking and more of the listening, but he seemed glad to do it.

Bill, Jr., came in while we were lunching. He had been out on a murder trial—Emporia's annual—they said. 'We have an average of one murder a year, and it's an event when it happens, as is the trial,' said William Allen White.

Then came talk of the Lewis books. Mr. White started it: 'I'm one of your

six best readers. I bought forty copies of *Main Street* and sent them to my friends.'

Mr. Lewis opined that William Allen White was one of the first editors in America to give *Main Street* its premier boost into the best seller class.

I thought as they talked, 'Why not? Mr. White lives on Main Street and he would find much in that book to verify his own experiences.'

THEN came talk of shows and theaters. *What Price Glory* was coming to town the next week. Mr. White was disturbed. I asked why. He replied: 'Because we are not sophisticated to the Son-of-a-Sea-Cook School of Art yet.'

That seemed to me to be the most penetrating observation on the modern cursing, sex-saturated drama that I had heard for a long time.

The afternoon was spent in the *Gazette* office. It is a typical small-town newspaper office. There is the front business office where Mr. Hughes presides. He is Mr. White's long-time friend, and business manager of the *Gazette*. Mr. White says, 'I go to him when I want five dollars. I say, "Could I get a little cash today?" He looks at the bank book and says, "Maybe. I can't give you five, but here's four!" '

Back of the business office is Mr. White's editorial room, with a big chair, leather seat full of holes, dirty and knife-carved; and an old typewriter which looks as if had come over in the *Mayflower*. Piled in one corner is a half-opened box. It is the only thing that looks new in the office. It is a box containing copies of Mr. White's book on President Coolidge. He autographed one each for the visitors.

Then we talked about books. Mr. White turned from a half-written editorial to chat.

We wormed it out of him that his *A Certain Rich Man* sold more than one hundred thousand copies, *In the Heart of a Fool* nearly that many and the Woodrow Wilson book close to fifty thousand copies—which easily puts this country editor in the best seller class himself.

All we could get him to say about what he was going to write next was: 'I will finish that Roosevelt book. It was interrupted when Mary died. She was in and out of my study so much while I was writing it that when she went away I just hadn't the heart to go on with it.'

We agreed that of all those who have already written a Roosevelt life, and of all those who are planning to write one, William Allen White is best equipped.

'I have it nearly finished. It will not take much work to finish it.'

'Will it be a critically discriminating book, or just a friend's estimate? In other words, will you tell the truth about Roosevelt?' Mr. Lewis asked.

'Whoever would attempt to tell the truth about Roosevelt would be a liar,' replied Mr. White with a smile. We later learned that before the Roosevelt book there will be issued by this prolific author a book of reminiscences over a period of fifty years.

MR. WHITE turned back to his battered machine and one-fingered away at the editorial. It gave me a chance to look about. I was glad of it, for I was fascinated with that office. On an old plush-covered sofa in one corner was a pile of framed pictures as high as a man. They were covered with the dust of years. I'll wager some of them have been there since Bryan first ran for President. I excavated them myself, feeling like an explorer digging into an Egyptian tomb. There were autographed pictures of Bryan, General Wood, Roosevelt, Taft, Harding. On top was a picture of Bryan sitting at a table in the New York Convention, in his shirt sleeves, fanning himself with a big palm leaf, with the most pathetic look I have ever seen on a man's face. Mr. White turned from his editorial to explain that the picture was taken immediately after Bryan had been hissed by the galleries. It had a Bryan autograph: 'I had never seen this picture, but am glad to have it in your possession. W. J. Bryan.'

Back of the editorial room are the reporter's offices, and back of them the form rooms, the linotypes and the job presses. In the basement are the large presses.

IT IS a two-story brick building, a typical 'Main Street' newspaper office, but the great of the earth have gone in and out its double doors.

When I finished digging into that morgue, excavating that tomb of dead history, my hands were black with dust. Mr. White pointed to the next room where the printer's towel hung on the roller, dirtier than ever. However, it made an improvement on my hands.

White was soon opening his mail. One letter was from the Motion Picture Colony—one Will Hays—protesting about Mr. White's recent *Collier's* article on pictures. There was a letter from *Harpers* about Mr. Lewis, a timely coincidence, and Mr. White turned and said, 'Here's a letter about my favorite author.' Another was from an undertaker's journal, *Casket and Sunnyside*, objecting to Mr. White's reference in the Coolidge book to the 'manners of an undertaker.'

Then there was talk about the strangely humorous names that trade journals take upon themselves, suggested by *Casket and Sunnyside*. Mr. Lewis had just come from Kansas City, where a convention of cleaners and dyers was going on; he had seen a copy of *The Cleaning and Dyeing World*.

Then followed introductions all around, from manager to printer's devil. Mr. White's visitors meet all his men; and it is a friendly family, this group of printers, reporters and clerks. They enjoy an average employment in this household of fourteen years, and they seem to be happy. All wear loud neckties. I asked why. A reporter said: 'We have to get 'em pretty wild to keep up with the boss!' I glanced up. The boy was right.

There was a walk about Main Street. Everybody knows Mr. White in Emporia. It's a (*Continued on page 20*)

Home of William Allen White in Emporia, showing part of the 'educated gardens' at the left.

EASTER—*Is It* Christian *or* Pagan?

By CHARLES D. CAMERON

Border by GERALD VAN DER HEYDEN

AT EASTERTIDE, among us, the devout lose thought of all else in commemorating the Resurrection. The gay rejoice, with sighs of memory, at the relaxation of Lenten abstinence. The worldly flaunt the pomp of a new social season. Toddling children in white, basket on arm, wander about the house searching for the wonderful colored eggs left by the White Rabbit. And somebody, devoted to antique custom, repeats the ancient absurdity:

'Easter, Christmas, and the other Christian Holidays are merely adopted pagan festivals!'

The iteration of this nonsense of the season can now be expected like the confetti of an Italian carnival or the horns of a Scottish Halloween. It comes in the ordinary circles of American life as regularly as the hanging of holly wreaths or the outflowering of the immortal white lilies.

The weird notion circulates only within the intellectual range of certain individuals, as the myth of the egg-purveying White Rabbit finds acceptance only among Santa Claus' children. No scholar of the first rank would include the White Rabbit in a treatise on domestic animals, nor Santa Claus in a discussion of philanthropy, nor 'pagan origin' in an authoritative work on Christian festivals. But some numbers of people have actually been found who take the notion seriously, just as there are children who become so convinced of the reality of Santa Claus that it is a heavy task to undeceive them.

The difference between the Child Mind that believes in the White Rabbit and the Sophomore Mind that dogmatizes about the identity of Christian and pagan rites and days, is that the Child Mind is tolerant and enlightened. His White Rabbit does not devour Easter lilies or any other hopeful flowers that grow between the graves of this world. The Sophomore Mind—sometimes visible in a young intellectual flapping immature wings, and sometimes found in an older man whose thought has never ripened beyond the promise of youth—is intolerant. It is unscientific. It is arrogant. It glares upon us with a red signal of danger, for 'a little learning is a dangerous thing.'

When one looks back from this Easter to all the Easters that have been, it seems too bad, indeed, that the old pagans never knew that Christianity was only paganism. Sixteen hundred and fourteen years ago, Constantine the Great issued from Milan a decree of complete tolerance for the Christian religion. This decree, which brought up from sunken catacombs and from obscure exile the chieftains of faith, was issued while Constantine himself was still a pagan—it preceded by some years his assembling of the Council of Nicea and his own baptism.

Of course, it is easy to see the origin of this fallacy of Easter and Christmas as pagan festivals. The fallacy is like an assertion that the American Fourth of July is a festival in honor of Chinese dragon gods, adopted by the superstitious Yankees and associated in their superstition with the idea of their independence.

How could anyone say that? By pointing out that firecrackers were invented by the Chinese as an offering to dragon gods, that punk sticks, with which firecrackers are often lighted, are burned as incense in Mongolian temples. This may not prove to all that the Fourth of July originated in China, but it presents the identical kind of evidence offered to prove that Christmas and Easter originated among the heathen.

We Yankees, of course, know that it was only by chance and accident that firecrackers ever came to be burned on the Fourth of July. The familiar noise-making instrument was the gun, and the gun is what the boys wanted. The firecracker was a substitute—it produced the noise with lessened peril. So it was adopted, not as a Chinese votive offering, but as an American toy.

The word Easter we have taken from paganism, and we of English speech alone have taken it. Nearly all other languages of Europe call Easter by a name that recalls the Passover season, which was also the time of the Crucifixion and the Resurrection. We have taken the word only, and added an entirely new meaning—just as the Scandinavians took the old word *Jul* or Yule—and applied the name of this February pagan festival to the December celebration of the birth of Jesus.

Christmas and Easter and the other great festivals of historic Christianity are of Christian origin and purpose and meaning. Yet the days themselves are not essential to a devoted profession of Christianity, as Puritans, Covenanters, and Quakers, among other sects, have shown.

Sapiro Sues THE DEARBORN INDEPENDENT

Libel Trial Starts Before Federal Judge *and* Jury *With* Opening Statements *by* Counsel

WHETHER Aaron Sapiro, Chicago attorney, was libeled by THE DEARBORN INDEPENDENT is to be decided by a jury of six men and six women sitting in the United States District Court for the Eastern District of Michigan, Southern division, at Detroit, before Judge Fred M. Raymond of Grand Rapids, Michigan. The case is based on a series of articles criticizing the Sapiro Plan for coöperative marketing of farm products.

The articles complained of were published two years ago and Mr. Sapiro asks $1,000,000 damages against THE DEARBORN INDEPENDENT. The trial may last several weeks and promises to go into every detail of Mr. Sapiro's activities in promoting his coöperative plan.

The history of the case begins in 1924 when THE DEARBORN INDEPENDENT, in its issue of April 12 of that year, published the first of the articles complained of by Mr. Sapiro. For the period of a year, other articles were printed at intervals, the last one appearing on April 11, 1925.

Following publication of these articles, Mr. Sapiro, in 1925, filed his libel suit for damages.

His declaration consists of twenty-one counts in which 141 instances of alleged libelous statements are cited as having appeared in the series of articles.

The plea filed for the defense is a voluminous document of more than five hundred typewritten pages, one of the longest and most extensive pleas in court history.

The opening of the trial was fixed for March 15, when Judge Raymond, after listening most of the previous day to arguments on a motion by the plaintiff's attorney to strike the plea filed by counsel for The Dearborn Publishing Company, denied the motion and directed the calling of a jury to try the case.

Trial began before a crowded court room. A score or more of newspapermen were present to send the story out to the country, for it has become one of national interest, due to the prominence of those involved and the interest throughout the agricultural districts in the coöperative plan as promoted by Mr. Sapiro.

Representing Aaron Sapiro in the trial are Mr. Sapiro himself, William Henry Gallagher, Detroit attorney, and Robert S. Marx, a former Cincinnati judge but now of Chicago, law partner of Mr. Sapiro, and William F. Lynch of Chicago. Mr. Sapiro was admitted by Judge Raymond to practise in the United States District Court.

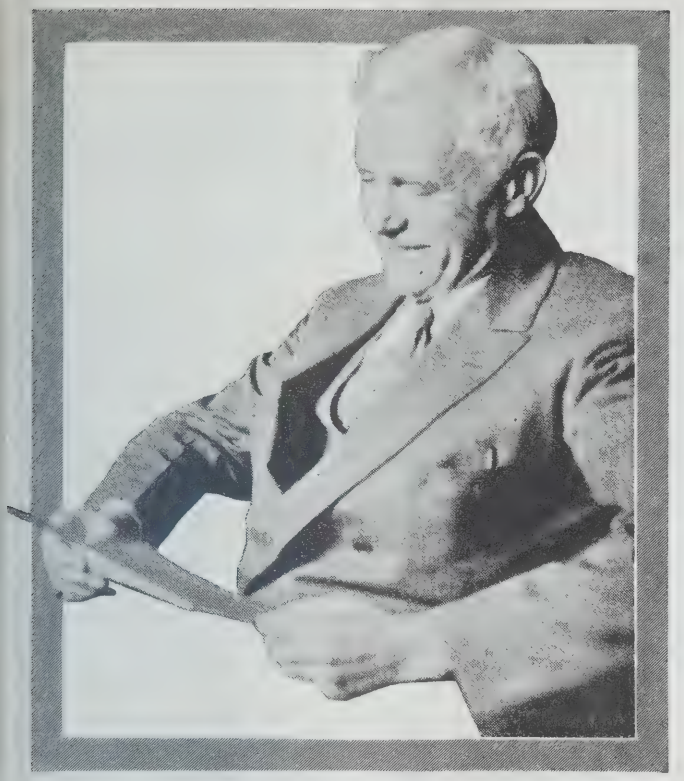
Representing THE DEARBORN INDEPENDENT are U. S. Senator James A. Reed of Kansas City, Missouri, a chief counsel; his law partner, Judg Richard J. Higgins; C. B. Longley general counsel for the Ford Moto Company; Raymond E. Watson, at torney of Kansas City, Missouri Judge Stewart Hanley, and Attorne Ward N. Choate, both of Detroit.

Indications of the extent to whic the defense intends to go in the tria are given by more than two hundre depositions which have been taken i various parts of the country where th Sapiro Plan of coöperative marketin was introduced and in the fact tha more than one hundred witnesses als have been called to testify. How man witnesses will be called by the plaintif has not as yet been indicated by hi counsel.

Under the rule of procedure adopte by the court in which Judge Raymon did most of the questioning of venire men, the jury was completed within a short time.

Before those accepted were sworn in for service, Judge Raymond explained to them that the trial of the case would extend over several weeks, that it would be an arduous one and that any who felt that for physical or other reasons they would not be able to serve throughout make it known and they would be excused. Apparently satisfied that they could endure the

Upper row, left to right—*Carl P. Haag, Amor M. Duart, Ernest Schweim, Herbert Schoenhals, Charles C. Parkhurst, Charles J. Daly.* Lower row, left to right—*Mrs. Grace L. Stiles, Mrs. Cora Hofman, Mrs. Grace A. Jewel, Miss Anna M. Konen, Mrs. Emma Clarkson, Mrs. Anna Brown.*



Senator James A. Reed.

rocedure, none of the jurors made any ffort to be released from service and ıey were accordingly sworn in.

Those on the jury which was drawn om various sections of the district, ɔmprise the following:

Mrs. Emma Clarkson, housewife.
Charles C. Parkhurst, dry goods mer-ıant.
Mrs. Grace A. Jewell, housewife.
Miss Anna M. Konen, housekeeper.
Herbert Schoenhals, hardware dealer.
Carl P. Haag, retired druggist.
Mrs. Anna Brown, housewife.
Amor M. Duart, accountant.
Charles J. Daly, farmer.
Ernest Schweim, retired cafe proprietor.
Mrs. Cora Hofman, housewife.
Mrs. Grace L. Stiles, widow.

Opening statements were made rst by Mr. Gallagher, chief counsel ɔr the plaintiff who took up nearly vo days in presenting to the jurors Ir. Sapiro's contentions in the case, ıd by Senator Reed, who addressed ıe jury on behalf of the defense.

In opening his statements, Mr. allagher dwelt for some time on the w of libel and then in reference to ıe parties in the case said:

'First of all, who are the parties? No ıe need say to a Michigan jury who Henry ɔrd is.

'The other defendant is The Dearborn ıblishing Company. In this case it is ry important for you to understand who ıd what The Dearborn Publishing Company

'We expect to show by evidence in this se that The Dearborn Publishing Com-ıny is merely the creature of Henry Ford, s mouthpiece, his spokesman.'

Regarding his client, he said in part:

'The other person involved in this law-suit is Aaron Sapiro. It is of some interest to you to have some idea of who this man is. You know he is a stranger in our community. He is now a resident and citizen of the State of Illinois.

'He first saw the light of day in 1884 in the city of San Francisco, California, making him now some forty-three years of age.

'When he was nine years of age he was one of seven children, and in his ninth year he had the misfortune to lose his father *through a railroad accident.* That circumstance left his widowed mother with seven children to take care of in the world, of whom he was the second eldest.

'After about a year's struggle with her situation, the widow placed four of these children in a Hebrew orphanage in San Francisco. He was one of them, and he remained in that orphanage until the year 1900.

'During that time he attended the common schools of San Francisco, until he was graduated, and then attended the Lowell High School in San Francisco until he was graduated. At the time of his graduation from the latter institution in 1900, some of those who were interested in this orphanage decided to send him on to institutions of higher education, and he went to the city of Cincinnati, where he entered a Hebrew institution, theological in character, where he continued for some six years, at the same time attending the Cincinnati University in the same city.

'He was graduated from the Cincinnati University I think in 1906 with the degree of Bachelor of Arts. He remained at the university as a second or assistant professor of history for another year, and was then given the degree of Master of Arts.

'Altogether I believe he remained in that city until 1908 . . .

'At the end of that time he returned to his native city, San Francisco, resolved to enter upon the study of law, and accordingly entered the Hastings Law School of the University of California, and at the same time entered a lawyer's office in the city of San Francisco, and studied his law in the law school and in this law office until 1911, when he was graduated from the university law school, and was admitted to practice in the State of California.

'Upon his admission to practice as a lawyer in 1911 he first entered upon the practice of his profession while occupying the position of secretary to the Industrial Accident Board of the State of California. While acting in that capacity, he framed the California law which made provision for Workmen's Compensation.

'After about two years with the Industrial Accident Board, he entered the practice of law, at first with two or three other men in a firm, and after about a year's time passed from that into practice by himself.

'About the year 1915 he was introduced to the subject matter which brings us into this lawsuit. About the year 1915 Governor Johnson of California appointed Colonel Harris Weinstock director of marketing of the State of California. As indicated by its title this office had something to do with the markets of that state.

'Mr. Weinstock had known Mr. Sapiro through Mr. Sapiro's being located in an office with a lawyer who had formerly been Weinstock's attorney. When Colonel Weinstock was made director of marketing, and found the farmers of California coming to him with problems on marketing, he found that very often those problems involved legal propositions and required the consideration and determination not merely of a coöperative marketing expert, a man versed in marketing of farmers' products, but a man versed in law as well.

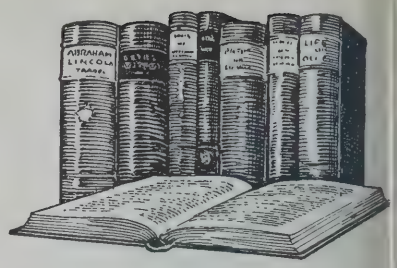
'So Colonel Weinstock called upon Mr. Sapiro to lend to him his experience and his talents in aiding and guiding these farmers who had these problems brought there for solution.

'From his study of these problems and study of the law applicable to them, he evolved himself certain definite, distinct ideas which he believed would be useful to the farmers to put into practice in solving these problems that they found themselves confronted with, and, so, when he was called upon, he had definite, distinct notions to offer, and was prepared to explain and expound those definite, distinct notions.

Aaron Sapiro.

'Now, in due time, the ideas that Mr. Sapiro expressed came to be known as Sapiro's ideas; and the general plan upon which he advocated the marketing of various groups of farmers' products became commonly known as *(Continued on page 26)*

Concerning BIOGRAPHY



THE spark that first made my mind flame into visions and ambitions was a biography. No publisher today would print it, no reader give it house room, its name would not be recognized by the wisest New York reviewer. As you may guess, it happened in days before the biographers thrust the biographed into the shade, when the life was the thing, and the book its servitor. For I do not remember the writer's name, but the fame of his subject will remain as long as my memory functions. It turned away my life, for good or ill, from many possible channels into the one whose control of me I shall never escape. Such is the terrific tyranny of an obscure book taken at the tides of life.

I have been trying to imagine what would have happened to the good man whose life I read in that thin little volume had he fallen into the hands of a modern biographer. It is a useless exercise; no modern biographer would give a thought to my poor hero. But the idea persists, because so much of modern biography is *revisionary;* it goes back over the road to repair the defects of the less sophisticated original biographers. And it loves only shining marks. George Washington is one of them. No doubt the modern biographies of George Washington are true—in the same sense that it is true that your most respectable friend did not beat his wife yesterday; but if that were all that is true of him he would be neither respectable nor your friend. What is 'true' of George Washington most of us learned years ago—I mean the unprinted things—but if it were all the truth, or the determining truth, or in any sense the vital truth, there would have been no discussion about George Washington at all. Written biographies—from Parson Weems to Rupert Hughes—would not require to be corrected; there would never have been any reason to write them.

A little while ago I sat in with a few friends and the gifted biographer of one of the best loved men of the last fifty years. We were discussing the advisability of including in the book the one blot on a singularly straight life. I had almost written *pure* and *sweet,* for there was a hilltop freshness about the man, but see the effect on me of this *Anno Mencken* 1927! —I do not write *pure* and *sweet;* it would not be understood. This man had commenced paternity before society sanctioned it, and it was discussed whether the 'truth' should be told. Some soiled linen once belonging to Robert Louis Stevenson, but long before cast off in his skyward sweep had just been waved before the reading public by two biographers, and the little group was disturbed by what they believed to be 'the new frankness that was coming into biography.

THE incident we were discussing had occurred before the man's mind had waked. It was in his young animal years. It was worlds away from any relation to his life or fundamental character. In another civilization it could be announced without the slightest hesitancy; maybe it can be told in our own civilization when it shall have sloughed off some of its accumulated hypocrisy; but the decision reached by all was this: it was no part of the man's biography—life writing—which his years of conscious labor had inscribed in history. Some day, however, some one with an eye to the cheapjack writer's cheaper dollar will publish it. There is nothing but decency to prevent.

Lives of great men all remind us
There will surely come a time
When some writing chap will blind us
And besmear the Great with slime.

Still, I like the new biography, mostly because it cannot last in its present form. It will lead on to something more lifelike. Take Strachey's little Punch and Judy show which he offered to the world as the life of *Queen Victoria.* Biographers once pleased their public by showing the Great to be human—the Queen visiting a poor sick woman, the Philosopher playing horse with a child, the Statesman fishing in the brook of his boyhood. Biographers now suppose they please their public by making the great seem Foolish. Well, it (*Continued on page 22*)

Unenlightened Material Success

BECAUSE the original motive which binds mankind to labor is the need for physical sustenance, it has been assumed that this constitutes the only meaning which labor can have for man. The standard of sustenance tends to be raised by what it feeds upon. We speak of 'the American standard of living'; we note that luxuries which were beyond the dreams of our fathers have become the common necessities of today. High standards of physical decency, of individual opportunity, of social environment have been reached by successive degrees, and still continue to advance.

There comes a time, however, when the normal sense of acquisitiveness is satisfied and a challenge arises in individuals as to what this kind of progress is worth, and what it all means. This challenge arises most readily in American life. For here we have a tradition of *work*, in contrast to traditions of acquiring fortunes in order to retire from work. We feel here that work is a large part of a man's life, which he cannot relinquish without at the same time relinquishing part of his life. We do not feel, as in some countries, that work is a necessary evil to be strenuously prosecuted in order to amass enough money to escape it.

And just because the fact of work does occupy so large a part of our life in America, we come the earlier and the more demandingly upon it for a sufficient meaning.

THE spectacle of stagnation in the midst of prosperity which looms up in the world today seems to have come out of a surfeit of material success, but out of a surfeit of material success that was not adequately enlightened by a noble meaning. Because the original motive of labor is physical sustenance it should not be assumed that this constitutes the only meaning that labor can have for man. What we call business is stagnating in the lower regions of meaninglessness where it has been thoughtlessly relegated and is now eager to come into its own in the spheres of significance and service.

When the work happens to be, as in America, highly profitable, and surrounded by an atmosphere of plenty in every field—plenty of material, plenty of jobs, plenty of wages, plenty of business, plenty of capital and plenty of profits—in short all the qualities of which impoverished men think they would never grow tired, it is not strange to see stagnation occur, which is first of all perhaps, a stagnation of interest.

For there are two things of which men grow weary in the material sphere, meaningless poverty and meaningless prosperity. It is simply that a dominant condition at either extreme of the scale of goods becomes tiresome unless there is something else added to it. For St. Francis, poverty was a stirring adventure. For a modern, great plenty may be made just as stirring an adventure. The fact is that, as a general observation, both poverty and plutocracy are seen to be insufferably dull.

'The tired business man' is not so much tired of his business as of that which for him has no meaning beyond itself. The desire to 'escape from business' is really a desire to escape into a region of the mind where, it is supposed, business has no place. But if we study the deeper tendencies of the time, it will be seen that *Business itself*, and not merely its servant the 'business man,' *is also desirous of escape into a new region of meaning.* Business—the great human element which we call Business—is stagnating in the lower regions of meaning where we have kept it, and is restless to attain its rights in more honorable regions of significance and service.

It is, of course, a great thing to keep the homes of 110,000,000 people in a state of plenty and to employ in a degree the creative faculties of so great a nation. But our very success in doing this is making it so commonplace as to be partially lost sight of as a justifying end. Indirectly, all our great institutions of education, healing, research, religion, government, art and literature, are supported by Business. But only indirectly, because it is not for these that we work; we do not work with them in mind. We work with money in mind. The meaning which money might otherwise have is hindered by insufficiently inclusive motives.

It is true, of course, that by gifts of stock and other devices, certain institutions are to a large extent supported by the business and profits of commercial corporations. One sees this in the case of certain hospitals in England and of a few educational institutions in this country. But, again, these are not the *reasons* why the managers manage and the workers work. To arouse interest and give a meaning to business, there has been adopted in this country a system of profit-sharing, which in itself is a good thing, though its limitations are obvious; but at its best one sees that it is merely a spreading of conditions which in themselves and at their highest have failed to give that substantial meaning to effort which, as we say, 'keeps up the spirit.'

So that this strange spectacle of stagnation in the midst of prosperity is one which suggests a wholly new problem in the world, especially in the form in which it now looms up. True, it has come to individuals in all generations. True, it has come to society generally after a surfeit of evils, such as wars and oppressions. But now we seem to be facing it, not out of a surfeit of material success, but out of a surfeit of *material success that was not sufficiently enlightened and ennobled by a high meaning.* We shall consider this further.

'Ford Ideals,' 452 pages, cloth bound, contains 98 of these articles. Postpaid $1.00.

OF THE DEARBORN INDEPENDENT

The Bankers' Conquest

THE Bankers' Conquest of Europe has progressed so far that it is at last coming out into the open. Partial details of the Conquest are even finding their way into the daily press. Arno Dosch-Fleurot, noted foreign correspondent, stabs closer to the truth than he perhaps realizes in a recent dispatch from Paris. 'New York, London and Berlin are about to cast their finances together on a plan for financing the newer European states, which grew out of the peace treaties,' he says; adding that the first move is expected to be for Poland with a loan of $150,000,000.

Possibly the most surprising feature of Dosch-Fleurot's story is that it reveals the link between the bankers and the League of Nations. 'Concurrence of the Economic Council of the League of Nations would be obtained to give sanction and determine policies, but no financial controller would be under direct supervision of the League as is the case with Austria, Hungary and Bulgaria. . . . The delicate point is in the method of control. Poland obviously is not willing to submit to a financial dictator . . . The scheme, however, has the virtue of not offending Polish national dignity, *as it is merely a part of a general plan affecting most continental states.*'

Two other intensely illuminating statements are made. They are:

'The idea is supposed to have originated with *Governor Montagu Norman of the Bank of England, who obtained the approval of important financial groups while in New York last winter.*'

'*If the plan is carried out, New York and London, and to lesser degree, Berlin, will financially control the Continent.*'

Nobles All

ENGLAND is greatly agitated by the suggestion that Lloyd George, while Premier, 'sold' titles of nobility. The fact is generally acknowledged, however, and the practice is of great antiquity. Impecunious British monarchs formerly refurbished their treasuries by the sale of titles, and now this royal privilege has democratically passed to the people. Instead of the Crown benefiting pecuniarily, it is the Party that benefits, and perhaps seldom more so than under Lloyd George. At least he holds such a large amount of this secret loot that he *is* the Liberal Party. No Lloyd George, no party funds.

To us it seems an excellent practice, worthy of adoption in this country. Why not devise a Peerage of Profit, to which deserving party contributors could be elevated? Take the case of Mr. Insull, for example: it is rather hard that all that he should get out of his liberal gifts is a senatorial investigation with contempt proceedings attached. How much nicer if the whole thing could have been smoothed over with a 'Sir' for Samuel or a new name altogether—how would Lord of Keokuk do? The saving to the Government in oil leases and land deals alone would be considerable. That in itself is enough to commend the idea. Instead of paying the party contributor with the choicest oil wells or the most profitable water-power sites in the country, he could be rewarded with a title or an 'honor.' Who among us would not thrill to the title of Earl of Elk Hill, or Duke of Teapot Dome?

Of course, there is always a chance that desirable localities may give out, but in that case titles could be issued for notable talents or events connected with the recipient. Candidates for the title of Baron of Buncombe would possibly be too numerous to permit of a selection. But few could honestly dispute with an eminent Philadelphian the honor of Lord of the Stuffed Ballot Box.

Under Cover

UNDER cover' activities in Washington are not confined to federal dry agents. They extend higher up—with this difference: under-cover prohibition agents seek to disclose dry-law violations, under-cover officials to conceal them. Here is the latest instance.

A truck containing twelve cases of valuable liquor was stolen by hijackers while its crew were in a Washington restaurant.

The theft was reported to the Washington police.

It developed that the liquor belonged to a high Government official.

Further, that it was being brought into the capital under federal permit.

BUT—the police refused to divulge the name of the official.

AND—the Treasury Department refused to divulge the name of the permit holder. Hasty regulations were issued leaving to the 'discretion' of minor officials whether the names of those given liquor permits should be made public.

This should end the story; but it doesn't—

A few days later the King of the Rum Runners drove a truck to a Washington precinct police station. Two detectives helped him unload twelve boxes of varying sizes. The boxes were stored in the lieutenant's room—under lock and key. Next day two more detectives supervised their removal to a storage house.

He Did It With His Little Filibuster

SENATOR DAVID REED of Pennsylvania has the satisfaction of knowing that he has probably protected Mr. Vare from further investigation. He did it with his little filibuster in the closing days of Congress. And as Senator Reed's reëlection largely depends upon Mr. Vare's good will, this is probably an important item.

But he also has the knowledge that some half-million Civil War, Mexican War, Indian War and Spanish War veterans and pensioners will have to subsist somehow for two months without their pensions—*also because of his filibuster.*

The filibuster that prevented the Senate from voting funds for the Primary Investigating Committee likewise prevented it from passing the deficiency appropriation.

After trying for weeks to devise some means by which the pension payments could be kept up despite this, the Commissioner of Pensions has at last been forced to acknowledge defeat. *Announcements are being mailed the veterans that the United States Government will be unable to send them their pensions during the months of May and June.* This is their contribution—involuntary, and cruelly extorted—to keep Vare in his tainted seat.

Many of the veterans are blind, some helpless with age. Most are totally dependent on their pensions for the necessaries of life.

Two months' interruption in payments means hardships. These innocent bystanders in the game of politics as it is played by the Gentlemen from Pennsylvania will find it hard to understand why so substantial and trusted an agency as their Government should fail them in their hour of need.

An Uncensored Letter From Nicaragua

PLEASE regard this letter as coming from about one hundred foreign residents and in the neighborhood of thirty thousand naturals of the Atlantic littoral of Nicaragua . . .

'I am an American . . . During twelve years' residence in Nicaragua I have had exceptional opportunities to note the havoc and devastation caused by the "satisfactory rehabilitation of the finances" of the country, to quote from President Coolidge's late message, and I have had ocular proof of the gradually increasing poverty of the people under an ever-increasing indirect taxation through increasingly higher tariff duties on the necessaries of life.

'This "satisfactory" procedure has been going on since 1912, under the direction of J. and W. Seligman, bankers of New York, with their "satrap" here, one Col. Clifford Ham, an American, the actual head of the government. The two chief satellites of this Ham are two other Americans bearing the name of Lindberg, while some of the corporations and business interests, also all American, most benefiting through this peculiar form of rehabilitation have been, and are, headed by men bearing such distinctive names as Weinberger, Wuescher, Zamurray, Shultz, Jung, Wettstein, Fischer, Weil, et cetera, and these men have, to the last one, been active workers for a continuance of the Diaz-Chamorro régime nominally under which, as the Nicaraguan government, they have been functioning in their different capacities to the everlasting disgrace of the United States and to the almost utter impoverishment of the country.

'This imposing satrapy of American interests is really what our State Department, under the secretariat of Philander C. Knox, put in power in 1912, and kept in power by taking away from the great majority of the people the utilization of the franchise through the presence of our Marines at the capital for so many years. In the election of 1924 the people regained the utility of the franchise and elected the so-called National ticket by an overwhelming majority. This was accomplished through the aid of our then Secretary of State Charles E. Hughes, the only friend Nicaragua has ever had in that department of our government.

'Under Frank B. Kellogg our State Department swung back to the former policy of "the people be damned," by again adopting the Knox policy of backing the Diaz-Chamorro gang of exploiting politicians, the willing tools of the bankers; and the results of the honest poll of 1924 were wrenched away from the people, and the revolt of 1926 followed. Since that time our Navy has been openly backing the Diaz-Chamorro faction, under the thin guise of protecting American interests which needed almost no protection; and, it would seem, the crime of 1912 is to be repeated with almost no variation.

'Stripped of all falderal and clumsy camouflage the above is the bald truth of our interference in Nicaragua, so plainly evident to, and so openly acknowledged by, everybody here that we still gasp in wonder at some of the stuff that appears in our press. Not one word of pertinent truth will the American press publish when coming from American sources on the scene of action, but volumes of futile piffle are being published emanating from extraneous sources or from interests to whose advantage it is to hide the truth.

'And the American press is the only press of the world so held in leash. Is this for the reason that it is also subservient to the Hebraic banking interests which undoubtedly have some creature in our Department of State who is in close affiliation with them?

'Soviet Russia has never adopted more stringent means for the suppression of truth than have been adopted here, nor a more systematic method of exploitation, short of actual murder, though, indeed, the deaths resulting from this internecine struggle really come under this category . . .

'As an American citizen I most strongly object to such mid-European procedures being called even un-American, and I desire to express this objection to the American people, and, at the same time, enter an opening wedge for the purpose of righting a great wrong being perpetrated for the second time against a small people.

'Would you suggest how this could be done?

'With the sincere hope that this reaches your hands . . . '

Adventurings *in* HOLLAND

Romantic Nimeguen, Long *the* 'Observation Post' *of the* Netherlands

By
HILAIRE BELLOC

Drawings in Pencil by
EDMOND WARRE

IT MAKES no small difference to one's comprehension of any modern European country whether one's normal mode of entry goes with, or contrary to, the stream of its history in time. For countries grow up in a certain order spreading from some center or base: and travel may go *with* that order or against it.

Thus Spain grew up from the north. It was reconquered by the surviving Christians of the Pyrenees over the Mohammedan governors of the center and south. If you come into Spain by the north, and travel southwards you follow the development of the country. If you go in by Gibraltar and the south, going northwards, you get the development upside down.

People traveling from England have good fortune (in this matter) as regards some countries, bad fortune as regards others. They come into Scotland, for instance, by the natural historical direction; so they do into Ireland by Dublin, and on the whole their entry into France is of the same kind. But they are handicapped as regards the Low Countries and particularly as regards Holland. Holland developed *as the delta of the Rhine.* To bind together in one's mind the history and geography of the place one should approach it from the Rhine, and thence work outward along 'the sticks of the fan' toward the seacoast rim.

It is on this account that I think the best town in which to begin an understanding of Holland is Nimeguen.

The broad stream upon which stands the hill of Nimeguen—a fortress for so many centuries—is called the Waal. The name Rhine is given to a diminished stream which flows on past Arnhem and

St. Steven's Kerk and Waag (weighing house) at Nimeguen.

Utrecht to the North Sea. But it is the Waal which takes up the main body of water and carries on the mighty traffic of the Western Germanies to Rotterdam and the ocean. When you stand, therefore, upon the steep-sided citadel Nimeguen and look down upon the broad stream below, you are seeing the beginnings of Holland: the beginning of the delta where the Rhine breaks into many branches and has built up this fruitful land, the beginning of its cities, geography and history.

THE name is curious and characteristic. It is a Celtic name *Novio Magus* 'The new market.' But it is a Celtic name which has become teutonized. Those who guess at these things have a theory that some Germanic eruption broke here into the Celtic world. It may just as well be that there was a Celtic aristocracy giving names to places, with Germanic underlings whose popular tongue afterwards —in the Dark Ages—submerged their masters' idiom. The truth is we know hardly anything of what happened in the way of racial (or linguistic) movements here. But whatever the fortunes of its origin, Nimeguen is the true gate and entry into Holland. It preserves a large Catholic population drawn from the influences of the Rhine Valley and that also is characteristic in a nation of which rather more than one-third are of the religious minority. For this proportion of religion in Nimeguen is, as it were, the outflow from the Rhine upstream. Then again, Nimeguen is the true gate of the country as being the last 'observation post' or 'lookout' from the hill country over the great flat of the delta. You begin from Nimeguen, the 'adventure of Holland' as it were; the adventure of a unique experience; of a country largely lying below the level of the highest tides, defended artificially against the sea, carrying on its life perpetually by a conflict with nature, and thereby kneaded and annealed into a very strong national substance.

Nimeguen being thus the entry into the country from the Rhine, which has made the country, you see upon it a German impress which is here freshest and weakens as one goes farther west. It is upon the plan of the newer part of the town, which has the quality of the spacious modern German town planning.

But what is historical in Nimeguen is national. It is essentially Dutch in its older buildings, and the spirit of its people. Nimeguen has the quality which we find nowadays so often throughout Western Europe of a place whose ancient function has been abandoned or has changed: a place beginning as a stronghold, ending as a mart.

It played its part as a fortress down to the wars of the early 18th Century, and yet today one forgets that it is a fortress, and one almost feels, though no one can tell the future, that it will never be famous in warfare again.

It seems to lie off the track of conflict. Unlike the other centers of its day which have been deserted by the change in warfare, one does not in Nimeguen see conspicuously the relics of its older character. In Montreuil, for instance (with which so many Englishmen became familiar during the war as headquarters), the old, capital importance of the place is the stronghold which is most vividly impressed upon the eye. There you have the profound ditch of the defense and bits of the old medieval wall standing strongly to the north and west, with manifest guarded entry through what was once an armed gate.

At Nimeguen you see nothing of this. It has forgotten war. Yet to stand on the height of the old citadel so long dismantled, and to look over the great level to the west, and over the broad belt of the Waal at your feet, taking all the water-borne commerce of the Rhineland to the sea, is to feel at once the historic basis of the place. From that height men looked out in the days before the main waters of the Rhine were deflected by the cut of the Waal to the North Sea, and when the great stream ran on its natural course by Arnhem and Utrecht to its various mouths. From that height men looked out, earlier still, over the marshland of the forming delta, great flakes of water and ooze as yet untamed and unsettled by the Roman order.

From that height, perhaps, the first beginners of this land looked out upon a shallow sea that has become Holland and all its wealth in the days before the delta was formed.

If, then, you would understand Holland, come in from the Rhine, climb the abrupt depressive height of Nimeguen and strain your eyes westward and northward over the great flats for the tower of Utrecht and conjure up all the group of cities between you and the sea.

River Waal, with Valkhof in foreground.

Dropping Our Political Pilots

By HARRY PENCE

MAN shall not live by bread alone,' but that which *bread* signifies has its important place in the cosmic scheme. It can't be ignored.

Officeholding, for example—local, state and national—is with us no business or profession at all, but a lot of fellows aspire to and fight for places and preferment. In the main it is not the legitimate emoluments of the offices they seek—but something else—another kind of 'bread.'

This is not a tale of graft. There's enough of that, recorded and unrecorded. Rather is it the present purpose to show how the hit-and-miss of our public officeholding system has worked a cruel hardship even to the veterans inured to its vicissitudes and supposedly well able to take care of themselves. John Beauchamp (Champ) Clark narrowly missed the Democratic nomination for the Presidency in 1912. William Jennings Bryan turned the tide against him and to Woodrow Wilson. And in 1912, due to the Roosevelt defection in the enemy ranks, the Democratic nomination was equivalent to election.

Despite this disappointment there were still signal honors in store for Champ Clark. He was the Speaker of the House of Representatives of the 'War' Congress and as such one of the pivotal figures, 'key men' they are now called, in national legislation during that trying era.

The election of 1920 turned against the Democrats and the veteran Speaker's devotion to public affairs had not allowed him the time and opportunity to keep his own political fences in repair. He was defeated after serving thirteen terms, twelve of them consecutive, and had presided over four Congresses, eight years, as Speaker of the House.

HIS term of office would have closed at midnight on March 3, 1921, but he died on March 2, lacking but five days of being seventy-one years of age. Had he occupied as prominent a position in an industrial or mercantile institution and rendered in its interests approximately the same services, he would several years before have been gracefully retired to an economic competency that would have spared him the humiliation of being summarily 'laid on the shelf.'

It may be that the economic factor did not figure greatly in his case, but 'man shall not live by bread alone' and however inconsequential the matter of 'loaves and fishes' may be, it is a poor system that provides no better fate for its veterans than sending them to their graves with the shadow of defeat hovering over them.

A day or two after the election of 1922 Robert M. La Follette met a friend of Henry Cabot Lodge and inquired earnestly about the returns in Massachusetts. On that occasion Lodge 'just squeaked through' and it was several days before the result was definitely known. The Senate then included in its membership no more dissimilar pair, but personally the men were bound by ties of long association and, however much they differed on public issues, an old friendship still survived.

'I am glad to know that he'll pull through,' La Follette is quoted as saying. 'Henry is getting along in years and a defeat might go badly with him at his age.'

EVEN a near defeat did that. Lodge never recovered from this blow to his prestige. He was two months younger than Champ Clark, and was the ranking member of the Senate, recently elected to his sixth term. In five preceding national conventions of his party he had acted a prominent part, yet in 1924 this seventy-four-year-old veteran, who more than any other man had wrecked the Wilson program and re-established Republican ascendency, was a negligible figure at the Cleveland convention. Political writers made his relegation to the background a feature of their reports and editorial writers the country over commented upon it.

The election of that year did nothing to restore Lodge to influence and power. Quite the reverse. And no one familiar with the career of the Sage of Nahant will question the statement that his last days were embittered and his end hastened by this political reverse. He died November 7, 1924.

La Follette fought every step of his way up and then refused to quit fighting. As with Lodge one did not have to side with him to concede to him honesty of purpose and great skill in the direction of his energies. Opposition only stirred him to greater effort. As governor of Wisconsin he brought about a new era and in the Senate he was as famous for what he prevented from happening as for what he forced to take place.

Senator La Follette faced the break with his party in 1924 a man far from well. Five years younger than Lodge and Clark he was then sixty-nine years of age and had been a Senator for nineteen years. He could, it would seem, remain in the Senate as long as he pleased.

In the preceding Congress, however, a systematic campaign for his belittlement had matured. The death of President Harding and the elevation of Vice-President Coolidge to the Presidency made it necessary for the president *pro tempore* of the Senate to devote all his time to that office and Senator Albert B. Cummins, of Iowa, did not feel justified in surrendering that post and the extra salary it paid, to retain the important chairmanship of the committee on interstate and foreign commerce. La Follette was the next Republican in line on that committee and the conservative element of the party were aghast at the idea of La Follette becoming the head of that particular committee. The Senate does not willingly ignore precedent, but in this case it preferred and eventually selected Senator E. D. Smith, the ranking Democrat.

The final break came in 1924 and La Follette headed a 'third party' movement. Its immediate success was not seriously anticipated by its promoters. It was expected only to establish the nucleus of a party which would gather momentum with the coming years.

But it is related that in the midst of this campaign there came to the aged warrior the conviction that a tide had set in destined to sweep him and his associates to victory. It seems incredulous, but it comes from several generally dependable sources. The result of that election was a great shock to a man whose health was already greatly impaired. What he had said of Senator Lodge was true of himself. He did not live to witness the inauguration of the victor nor the official abandonment of independent political activity by the group that gave him his biggest vote. He died January 18, 1925.

THE year 1926 afforded two striking instances of death following hard upon defeat at the polls, each being the repudiation of a veteran by his own party in primary election.

Albert B. Cummins earned fame as an attorney specially expert in patent litigation before he entered public life. As governor of Iowa he was one of the foremost champions of a moderate tariff, scientifically adjusted by an impartial commission. It became known as the 'Iowa Idea' and it was execrated in the days of its inception as only the 'Moscow Idea' is today, by the ultra-conservative.

From the governorship Cummins went to the Senate, still the advocate of what was then characterized as radical legislation. From tariff his activities shifted to traffic. He took a leading

part in transportation legislation at a time when railroad history was being written in large letters.

In the process of time he settled down as the exponent f safely conservative measures and a staunch supporter of party regularity.

But the forces and factors which had eclipsed a star of the magnitude of Lodge of Massachusetts could not be told that it was dangerous to fool with a little fight in Iowa. When, therefore, Senator Smith W. Brookhart, rampant insurgent, defied leadership, and especially after he called upon the candidate for the vice-presidency to quit the ticket and the fight, it needed only a semblance of a contest to bring about his temporary undoing. It is useless to consider whether he or his Democratic opponent received the more votes. A decision in favor of the other man depended not upon the merits of the case but upon the sordid question of expediency, and the powers that were made the wrong guess. They were warned of the danger but could not resist the temptation. On April 12, by a vote of forty-five to forty-one, the Senate declared Daniel F. Stack the regularly elected Senator from Iowa in the face of the fact that Senator A. B. Cummins, who, as related, had become a 'standpatter,' was up for reelection and that the Iowa senatorial primary took place in June. Brookhart, of course, felt he had nothing left but to enter that contest, and on June 7 another illustrious name, that of Albert B. Cummins, was added to the roster of the 'Lame Duck Club.'

CUMMINS was older by three weeks than Champ Clark, by three months than Henry Cabot Lodge and had been a Senator for seventeen years. He had, as related, been chairman of the important committee on interstate commerce, which he left to become president *pro tempore* of the Senate. He was also chairman of the judiciary committee and a member of the committee on territories and insular affairs. He was seventy-six years of age and half a century of public service had not enabled him to acquire wealth. The small difference in salary between that of a regular member and that of the presiding officer was a matter of concern to him. He did not endeavor to conceal the fact. At an age when returning to the practice of his profession was out of the question, with nothing to look forward to but some unimportant, however ornamental, commission, he was repudiated by his party in his own state and left high and dry in conspicuously respectable isolation.

Six or seven weeks after this blow had fallen he died, July 30, 1926, and while his death cannot be directly attributed to it there can be no doubt that his unmerited defeat was a contributing cause.

In April another Congressional veteran was similarly retired by his party in Illinois. Large sums of money contributed by traction and power interests would seem to have turned the trick. The contributors were of the opinion that their interests would be better served by Frank L. Smith than by William B. McKinley.

Senator McKinley was also in his seventieth year, but was an aspirant for reëlection to a second term in the Senate, though he had served seven terms in the House.

It cannot be said that in this instance his defeat hastened his end. His ailment would likely have resulted fatally regardless of the results of the Illinois primary election in April. But the fact remains that like Speaker Champ Clark, Henry Cabot Lodge, Robert M. La Follette and Albert B. Cummins, his death followed closely upon the heels of a political reverse.

All these men were within five years of the same age and their end came within a similar span. All had given the best years of their lives to national legislation. Most of them had become distinguished as parliamentarians. At least three, if not four, had

Pen-and-ink impression by GERALD VAN DER HEYDEN

displayed talents and abilities closely approximating statesmanship of a high order. Of two of them it can be said that, had they not lived, the destiny of the nation would have been different. To each the end came in a period of anticlimax.

To the writer, to whom none of these men appealed as wholly admirable and who, had he been a constituent, would probably have contributed his mite to the defeat of more than one of them, the fate of none of them seems deserved. He has no solution to offer but it does seem that there should be, for national legislators at least, a post similar to that which the universities have created—that of Senator Emeritus, or Representative Emeritus, carrying with it certain honors and emoluments which would make the position attractive and its incumbent financially comfortable to the end of his days. This is frankly indefinite and fanciful, but—well, there should be some better way than throwing them out bodily at the end of their service.

Change *in* Treasury Policy

By M. T. W.

IN THE opinion of this writer the policy of the Treasury in refinancing public debt maturity has been neither as scientific nor as economical as claimed.

Instead of bridging over the quarterly financing periods by covering shortages of available funds by Certificates of Indebtedness maturing in six or nine months, at 3½ per cent upward, why should the Treasury not offer long-term bonds at two per cent, bearing the circulation privilege? These should be offered as far in advance of need as possible, to permit subscriptions of idle funds in all parts of the country, instead of confining participation practically to New York and the East.

The circulation privilege thus conferred would be extended by making these bonds exchangeable at the option of the holder for lawful money, thus improving on the old 'bridge' idea by making possible an immediate redemption of what otherwise might easily prove for a time a chilled if not a frozen credit.

A further advantage is the supply of needed currency in any section at once. It would also serve as an outlet for the new currency and a vehicle for the retirement of what is now lawful money.

The scientific and economic advantage of this plan is apparent. The conglomerate currency of today would be replaced by a single series system, every note a full legal tender for its face, and the right of issue resumed by the Treasury, *where it belongs*. The interest budget would be cut in half and the currency circulation freed from an onerous tax burden which makes possible a restriction of needed expansion in volume.

Confronted with larger maturities than in the past—so much larger that the total amount immediately needed is unnamed—announcement is made tardily, through circulars of the Treasury, to all bank and many private addresses, of the availability of an issue of 3¼ per cent.

Certificates, at each of the twelve Federal Reserve Banks, may be had by personal application or through member or other banks, at par and accrued interest. These certificates are in denominations of $500, $1,000, $5,000 and $10,000 and preference in allotment is given small subscriptions of the smaller denominations from a distance.

Partial circulation privilege is given by making interest coupons and the certificates themselves receivable for government dues at value to date of presentation.

The HAPPY OPTIMIST

By HUGH WALPOLE

Illustrated by W. W. CLARKE

Copyright, by HUGH WALPOLE

He burst into a roar of laughter.

Seymour Johnson, whose business is to help people out of their difficulties, is called upon by Mrs. Lane who complains that her husband is too optimistic and has got on her nerves. She wants some plan devised to make him less cheerful. In putting a scheme into operation Mr. Johnson is in turn attacked by melancholy and calls at the offices of the 'Society for the Promotion of Happiness.' He is received by Miss Allan, the lady in charge.

I WAS taken into another room where five or six persons, male and female, were sitting in a row on chairs, watching a stout young woman who was saying: 'Now, when I get to six, laugh. You will find it easier if you begin to smile at two, let the smile become broad at four, a faint ripple of laughter at five, and a broad outburst on the word six. Now, one, two, three—— No, no, Mrs. Browning, that won't do at all; that's not a natural smile. Let it come to the lips straight from the heart.'

Mrs. Browning was a rather elderly woman, and looked much nearer tears than laughter, and gave a little gasp of protest.

'I'm very sorry, Miss Jones,' she said. 'I think, perhaps, I could laugh when you say two, and then smile later, after the laugh. It seems to come to me more naturally that way.'

'Nonsense!' said the young woman. 'Now you watch me.'

There followed then the birth, progress, explosion and death of the most extraordinary laugh that I had ever been privileged to see on any human countenance. It was too much for me altogether. I burst into a loud guffaw, at the sound of which all the six students, who seemed to be sunk into a like depth of depression, turned to me with hopeful eyes. The young woman was delighted. 'That's the way, that's the way,' she said. 'Listen to that gentleman. Now you must try to get something as natural as that. Don't be disheartened. Now begin again with me. One, two, three——'

We went into a further room. Here there were some half-dozen men, all middle-aged or over, all with their coats off, engaged in bending down, trying to touch their toes. A thin little man, the instructor, was dancing about in a perfect tempest of rage. 'No, no, no, that won't do at all!' he cried. 'You've got to touch your toes as though you like it. Don't look so gloomy, Mr. Green. As I told you before, you'll find it much easier if you think of something pleasant while you're doing it—green fields and mountain-tops, or a good run in the park before breakfast—something really healthy and fine. Now, then, straight up with one, arms out with two, three half bend to the hips—'

'These,' explained Miss Allan to me, 'are all City men who are either in danger of, or have actually suffered from, severe financial losses.'

'It must be rather melancholy,' I said in the same stage whisper, 'all together like that. Wouldn't it be better to mix them with a few men whose affairs are rather brighter?'

'That's not been our experience,' said Miss Allan. 'We've found that the thought of one another's losses cheers them up. They like to feel that there are some others in the same position as themselves.'

It was at this moment that the great thought struck me. Here, if anywhere in the world, was the true place for the solution of my obstinate problem.

I was taken into a third room, where half a dozen rather elderly men and women were seated in couples, trying apparently to develop friendly conversations with one another. 'This,' said Miss Allan, looking at her pupils with great severity, as though they were most certainly not doing what they were supposed to be doing, 'this we call the Friends in Council Room. We introduce here to one another lonely folk who have not friends or any great interest in life. They come here for an hour in the afternoon and talk together.'

The lonely folk did not look at all as though they were enjoying themselves, except one fat little man, who was pouring out a flood of words into the ears of a rather grim-looking lady, who kept trying to interrupt him with little desperate ejaculations of 'I don't think—but why?' and so on, without his paying the very least attention to her. When we had been there two or three minutes, this lady jumped up and came towards us. 'Miss Allan,' she cried, in a voice not far from tears, 'I have not paid my twelve guineas to come here and be insulted. I don't like this gentleman. I don't want to talk to him any more. I'm going straight home, and you can whistle for your other five guineas.'

I saw then a sample of Miss Allan's remarkable firmness. 'Now, now,' she said, 'Miss Sturgis, hysteria, hysteria! You know that when the clock strikes the half-hour you can all change partners. Why, I wonder at you! How are you ever going to be happy and make nice friends if you don't give them a fair test?' Meanwhile it was amusing to observe the blank look on the face of the little fat man, who obviously thought that he had been a great success. It was when I saw Miss Allan's wonderful firmness, and the sudden submission of poor Miss Sturgis, that I was more than ever confirmed in my belief that this was the place for Lane.

When we returned to the office, I said to her: 'Miss Allan, I have been immensely interested in all that I have seen. I have a friend who could, I think, very much help you in your work. At any rate, he would I know, be himself greatly assisted by seeing this.'

'Is he melancholy, overstrung, unhappily married, or suffering from any incurable disease?' she asked with eager curiosity.

'Not at all,' I said. 'He's a very happy man, and it's just there that I think he can help you. I can't quite explain what I mean just now, but do let him come and see you. I believe it will be worth your while.'

'Certainly,' she answered. 'I'm delighted for anyone to come and see us. Now, confess, Mr.——'

'Johnson,' I said.

'—Mr. Johnson, that you have been

stuck by the radiant spirit that lights up these rooms—the happy faces, cheerful carolling voices.'

'I have been struck,' I answered. 'I've never seen anything like this before, and if anyone had told me about it I shouldn't have believed him. We live and learn.' With which sentiment Miss Allan entirely agreeing, we shook hands and parted.

I LOST no time in conducting my friend Lane to Miss Allan's offices. 'I want you to come,' I explained to him, 'because I think you'll do real good there. The object of the place, as I told you, is to put cheerfulness into people's lives, and, to tell you the truth, from the little visit I made I gathered that the one thing that was absent was that same cheerfulness. Now, you're one of the most cheery fellows I know.'

'Am I?' he asked, his face flushing with pleasure.

'You are indeed,' I answered. 'I never knew anybody who looked so consistently on the bright side of everything, and here you'll find people optimists by determination just as you're one by nature.'

When I introduced Lane to Miss Allan, I saw that at first sight she was disappointed. 'You don't look sick or anything,' she said to him, which indeed he did not.

He burst into a roar of laughter. 'Oh, I'm not sick,' he said. 'Never was better in my life. Isn't this jolly? Isn't it charming? I do like the colour of those walls. I think this is one of the nicest places I've ever been in in my life.'

Miss Allan was a little mollified. 'I'll just show you what we do,' she said. We went once again into the rooms where I had been on an earlier occasion. In the first room today a little group was seated, while the stout girl read aloud a piece of Dickens, having given instructions beforehand that at such and such a place they were all to laugh. It was the account of Sarah Gamp and Betsy Prig having supper in Mrs. Gamp's bedroom. All the pupils were waiting so anxiously for the words that they'd been told to expect, that they missed them when they came, and a severe scene of correction would certainly have followed had not Lane burst into such a roar of laughter that he did duty for all of them. 'By Jove, that's good!' he cried. 'That's jolly old Dickens, I know. That's awfully good.' All the pupils then faintly tittered, and Miss Allan, I saw, began to be aware of some of the uses to which Lane might be put. I left him there, and did not see anything of the family for three or four days. Then I had a letter from Mrs. Lane.

'Dear Mr. Johnson,' she said, 'I know you're trying to help me, and I'm sure you have some clever plan, but I really would be glad to know what purpose you hope to serve by introducing my husband to that place in Victoria Street. He is very interested in it, and has been there every afternoon, and he has come back each evening in most boisterous spirits. He says that it is quite wonderful work that they're doing, and he is thinking of introducing some of their methods into our family. He frightened Johnnie and Dulcie, our two eldest children, last night, out of their very lives by making them laugh according to numbers, with the result that they both burst into tears, and were sent to bed without their supper. I'm sure this kind of thing isn't what you intended, and I think you ought to know what's happening.

'Yours sincerely,
'Viola Lane.'

I wrote back—

'Dear Mrs. Lane,—Have a little patience and you will see that I am right. I don't want to explain more just now. Give me a week.

'Yours sincerely,
'Seymour Johnson.'

TWO days after this Lane appeared in the office. He was looking his jolly self, but for the first time it seemed to me that I noticed in him a rather puzzled, hesitating air.

'Well, Johnson,' he said, 'how are you getting on? Isn't it a splendid day?'

'If it weren't for there being no sun and its drizzling hard, I should agree with you,' I answered.

'Well, of course it's not exactly a day for being out-of-doors,' he added, 'but this is the kind of weather when one loves to be under a roof with a book and a pipe. It makes you feel good. Are you doing anything this afternoon?'

'Yes, several things,' I said. 'Why?'

'Well, I'm going to pay a call on Miss Allan. I'm helping her with one of her pupils. I had a little argument with her yesterday. It seemed to me that she was forcing her pupils into a mood a little too obstinate. What do you think?'

'Perhaps there is something in that,' I said.

'As a matter of fact,' he said, looking at me very solemnly, 'it's a pretty awful thing really when some-

I was present at the very first occasion in history when my friend Lane thoroughly lost his temper.

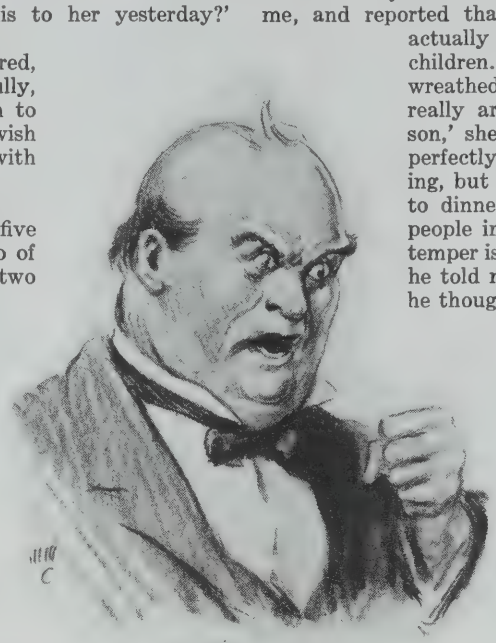
body's cheerful the whole time. Those people at Miss Allan's never drop it for a moment. You've always got to be laughing, smiling, singing and dancing. Of course they're delightful people, and I do admire the work they're doing, but I think they make it a little too monotonous.'

'Did you say this to her yesterday?' I asked.

'Yes,' he answered, looking at me doubtfully, 'and she didn't seem to like it very much. I wish you'd come along with me this afternoon.'

'I will,' I said.

When I had spent five minutes with the two of them, I discovered two things. First, that Miss Allan felt that she had now in her hands somebody who was going to be of the greatest use to her, an ideal instructor, and, secondly, that she had her firm grip upon him, and he was held a great deal more securely than he knew. She made him her model before the class. 'Now, ladies and gentlemen,' she said, 'you just watch Mr. Lane. You watch him laugh, and I beg you to notice how all the muscles of the face are involved at precisely the same instant. Even the body has its share in the general convulsive movement. Please notice the hands, the gesture of the right arm. Now, Miss Beaumont, would you mind reading a little?'



He turned around and swore most heartily.

Miss Beaumont was today reading from Jerome's *Three Men in a Boat*. 'Now,' said Miss Allan, 'at the words "and in he fell" you will see Mr. Lane convulsed with laughter. Watch him very carefully, please.'

For the first time, I suppose, in the whole of his life Lane did not laugh. Miss Beaumont read the words, paused, all the class turned as one man, their mouths open, their eyes wide, staring, and nothing happened.

'I'm awfully sorry,' said Lane nervously. 'Somehow, when you all expect it like that —— Besides,' he added, dropping his eyes before Miss Allan's stern ones, 'I don't think that's very funny.'

'Oh, indeed,' said Miss Allan very severely. 'Miss Beaumont, will you please pick out a piece a few pages on? Let me see —yes, page three hundred and twenty-nine, "then the dog barked." Now, ladies and gentlemen, at the word "barked" it is hoped that Mr. Lane will laugh.'

I was really beginning to be very sorry for my poor friend—he looked so incredibly foolish and at a loss. At the word 'barked' he did bring to the surface a feeble kind of titter. 'It's awfully hard to laugh to order,' he said to Miss Allan. 'Perhaps another day I'll be better.'

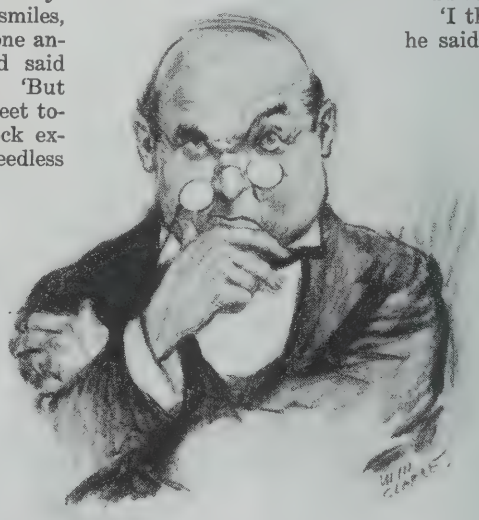
We went out finally to have tea in a tea-shop close at hand. He was quite distressed. 'I really do like Miss Allan so much,' he said, 'and I admire so much the work that she's doing, but I do think that she's not spontaneous enough. What do you think?'

'Yes, I agree with you,' I answered. 'But why go there if it bores you?'

'Oh, no, I don't want to let her down,' he answered. 'I'll help her as much as I can.'

Three days later Mrs. Lane came to see me, and reported that her husband had actually sworn at one of the children. Her face was wreathed with smiles. 'You really are clever, Mr. Johnson,' she said. 'He's always perfectly sweet in the morning, but when he comes back to dinner, after seeing those people in Victoria Street, his temper is quite uncertain, and he told me this morning that he thought it a great mistake for people always to be cheerful. I'm going to give him a bad egg for breakfast tomorrow morning, and have the greatest hopes of the result.'

Miss Allan now had her clutch skilfully fastened upon poor Lane. She introduced him to an offspring of the Victoria Street work, 'The Merry Musical Evenings.' This was a gathering that met in a studio in Kensington with the avowed purpose of all being lively, cheerful, and convivial without the aid of any intoxicating liquor, simply with the assistance of a piano and a Mr. Giles Merryweather, who was famous for his funny stories. Lane, of course, was summoned to these evenings, which occurred every Friday night from 8:30 to 12. He took me with him to one of them, and I have never spent a more horrible time. The cheeriness was overpowering. Everybody was wreathed in smiles, elderly ladies kissed one another repeatedly and said over and over again: 'But you're looking too sweet tonight, dear—that frock exactly suits you.' It is needless to say there were no young persons present. They all told their best stories, songs were sung, and at last there was a little jolly dance. At the conclusion of the whole affair a rather tired-looking clergyman got up, made a little final address in which he said that they were indeed carrying on a good work by raising the voice in merriment and song, that they were showing to the world how happy one might be without anything stronger than lemonade, that laughter and joy were beautiful things to carry through life; and then there was something about David dancing before the Ark, the full purport of which I missed, as I was trying to find my coat, that had been hidden in a corner with a number of others. I may say that it did not add to my personal merriment to discover that my coat had been stolen earlier in the evening. When I acquainted Miss Allan with this, she said it had obviously been taken by mistake, begged me to say nothing about it just then, lest it should disturb the merriment of the party, but that she was sure it would be found in the morning. I may remark that it never was.



For the first time, I suppose, in his life, Lane did not laugh.

LANE'S progress was, after this, extraordinarily rapid. He arrived in my room a week later, about tea-time, looking quite upset.

'I say, Johnson,' he cried, 'I'm hanged if I'm going to their Merry Evenings!'

'Well, I shouldn't,' I remarked. 'You're your own master.'

'No, but Miss Allan's so persistent. She'll come round to the house and fetch me. She's been round several times already. She orders me about as though I'm ten years old. She scolded me like anything yesterday because I couldn't laugh at one of old Merryweather's stories. I tell you what,' he went on, 'it's an awful thing the way they're all determined to be cheerful. It makes one quite blue.'

'I'm sorry for that,' I answered. 'I should have thought nothing would ever make you depressed.'

'Well, so should I,' he said, looking extremely gloomy, 'but you do get tired at that sort of perpetual optimism. Look here, can I spend the evening with you? I'm really afraid to go home. You don't know what a Tartar Miss Allan can be. She never loses her temper or anything. It would be splendid if she'd only swear a bit.'

We had quite a merry evening together, and I found him much better company than he had ever been before, and as we were coming out of the Oxford Theatre, when a man lurched against him and dug him in the ribs, he turned round and swore most heartily.

'I thought for a moment,' he said to me as we walked away, 'that was one of Miss Allan's staff—that man Bright who does the funny conjuring trick. If it had been, I believe I'd have hit him.'

'Oh, you're getting on,' I said.

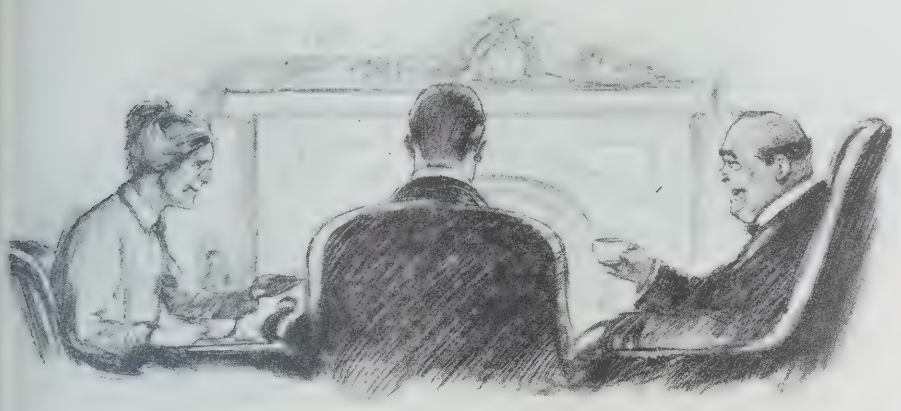
'Getting on?' he asked me. 'What do you mean?'

'Nothing,' I answered.

A few days later Mrs. Lane invited me to tea. 'I really must thank you,' she said, 'before he comes in. It's wonderful how he's improving. That Miss Allan rung up on the telephone this morning, and he wouldn't go near it, and told me to tell her something really dreadful. And when Dulcie woke him up last night by accident

om his after-dinner sleep, he snapped at er just like a real man. I am so grateful.'

While we were seated at tea, the doorbell ıng, and before we knew what was hap- ening Miss Allan was in the room. I could ee that Mrs. Lane was thoroughly fright- ıed of her. 'I'm so glad you've come to ea, Miss Allan,' she said nervously, 'I'll ave some fresh made in a minute.'



'Why do you sit staring at me like that, Viola?'

'I haven't come to tea,' she said sternly, xing her eye upon Lane. 'Your husband as broken his word to me, Mrs. Lane. He romised that he would be with us this fternoon at our funny story circle, and I've ome to know why he was not present.'

'Why, look here, Miss Allan,' said Lane, etting up slowly on to his feet, 'I'm not to e ordered about this way, you know. I was usy over other things.'

'Now, Mr. Lane,' said Miss Allan very almly, 'you know that's not right. You ave us your solemn promise to help us, and ow you're drawing back. When a gentle- ıan's given his word, he keeps it.'

'I hadn't given my word,' said Lane. I simply said I might come. Well, I thought etter of it, that's all.'

'Mr. Lane,' said Miss Allan, shaking her ead, 'is this right, is this good, is this the ay to make others happy?'

'I don't care a hang,' he burst out, whether others are happy or not! I'm sick f seeing people happy. I tell you what, Miss Allan, your place would be a lot better there was a little more ill-temper in it. ll that cheerfulness's got on my nerves, nd it's not real cheerfulness, either. I'm ot coming any more.'

'You are coming, Mr. Lane,' said Miss llan, 'and you know you are.'

I was then present at the very first ccasion in all history when my friend Lane horoughly lost his temper. He was crimson ı the face. 'You dare to say that before my ife!' he burst out. 'Do you know where you re? Why, you've only known me three eeks, and you speak to me as though I'm schoolboy! I tell you I'm not coming to our beastly place. I'm not going to laugh o order, and I am going to lose my temper hen I want to. It's a poor sort of man who oesn't get angry sometimes. You're trying o force all those wretched people into false appiness. There's nothing in the world ıore tiresome than somebody who's always heerful. I'm sure my wife will agree with ıe.'

'I do,' said Mrs. Lane, looking at Miss llan with awe. 'I do, indeed.'

I beheld Miss Allan with deep admiration. She was imperturbable. 'You may criticise my work, Mr. Lane,' she said with dignity. 'I know what I'm doing. You have turned your hand from the plough, you have set your face from the light. Upon your own head be it!' She went.

'Well, I'm hanged!' cried Lane. 'Of all the infernal, meddlesome old women—by Jove, I'd like to break something! Why do you sit staring at me like that, Viola? Don't you think it's irritating enough to a man to be scolded in his own house without having his wife stare at him as though he were an animal out of the Zoo? By Jove, it's enough to make any man lose his temper!'

'That's right, dear,' she said soothingly. 'We'll have some fresh tea up, and you'll feel quite a different man.'

She flung me a glance of triumphant satisfaction. The glance said: 'You have made me a happy woman. I can now act in my natural rôle of man-consoler and man-tranquilliser. I shall also from day to day be able to act in my other natural rôle of man-irritator and man-exasperator. At last my life is fulfilled, and I have you to thank for it.' All this her glance said. She went across and patted her husband's head. 'There, there, dear,' she said, 'you needn't go and see those tiresome people any more. I'm sure we've got a lot to thank Miss Allan for.'

'To thank her for?' he burst out. 'Tiresome, meddling old——'

'Mary, some more tea, please. You'll spend the evening, Mr. Johnson, with us, won't you?'

'I shall be delighted,' I answered.

The First Installment *of*

'The Adventure of the Beautiful Things'

another characteristic story by **Hugh Walpole**, will appear in an early issue. The story is written in Mr. Walpole's humorously satirical strain, with a steadily sustained interest that holds the reader.

William Allen White and Sinclair Lewis

(*Continued from page 4*)

wonder he has any arms left, he waves them to so many friends. It's a wonder he has any smile left, he dispenses it so generously. We met the bookseller, the college president, the mayor, the chief of police, the banker, the lawyer, 'the butcher, the baker, the candlestick maker—'

The walk home was pleasant with a crisp wind blowing from the prairies and some gay banter between Lewis and White: did Mr. White actually enjoy living in isolation in Emporia, or was it bluff?—with a sly dig at gallivanting all over the earth—and to New York a dozen times a year. And then the exasperating challenge: 'You know darned well, Bill, you'd rather be a citizen of London, England, than Emporia, Kansas!'

'I might if they'd give me the county printing,' said Mr. White with a twinkle in his eyes.

Just a word about eyes. There are two pairs of eyes I know in men that haunt me; the brown eyes of Edwin Markham, the poet, which always seem to be looking afar; and the blue eyes of William Allen White, with the same expression. Mr. White may live in Emporia, Kansas, but he gazes out beyond the horizon always. I think that, outside of his slight stature (which always surprises), his kindly, inquiring, farseeing blue eyes are his outstanding physical characteristic. They are a poet's eyes. Edwin Markham himself, possessing such eyes, knows how to describe them in 'How the Great Guest Came':

Tall was the cobbler, and gray and thin,
And a full moon shone where the hair had been.
(*almost true of Mr. White*)

His eyes peered out, intent and far
As looking beyond the things that are.
(*entirely true of him*)

Only the half of him cobbled shoes;
The rest was away for the heavenly news.
(*Mr. White is a world-citizen*)

Indeed, so thin was the mystic screen
That parted the Unseen from the Seen,
You could not tell, from the cobbler's theme
If his dreams were truth or his truth were dreams.

Mr. Markham may have been talking about 'Cobbler Conrad' but he described William Allen White perfectly, the hair, the eyes, and the spirit that is out 'for the heavenly news.'

And why? There was Mary White. Perhaps that is why. Mary was just seventeen and an animated spirit, born to immortality. Mary was loved alike by whites and blacks. A rush home from school, a horseback ride, a wave of her big hat to a passing friend, a frightened horse, a swerve into the low-hanging trees, a plunge, and little Mary White lay with a fractured skull.

Two little negro children sitting on the curbstone crying as if their best friend had gone, on being asked why they sobbed, said, 'Mary White is dead and we'll never get any more horseback rides. Nobody else will ever ask nigger boys to ride.'

Then came that immortal editorial, penned from a father's bleeding heart, which has become a classic of faith and hope in immortality, and is used in school textbooks as an example of perfect English, to go down side by side with some of Lincoln's writing. We all know Mary White because of that.

There was talk about Mary White as if she were still alive. One of us brought away a beautiful picture of that animated child face, a brown sepia, the photograph of a little girl who seems to leap out at you with the unique personalities of both her charming mother and her virile father.

And I thought, as I heard Mr. White talk of his Mary, that perhaps it was this experience which gives him that wistful, expectant look in his eye, the look and the speech of confidence:

His eyes peered out, intent and far,
As looking beyond the things that are.
He talked as one who is done with fear,
Knowing at last that God is near.

Markham surely caught William Allen White in that poem.

Then there was the goose dinner, as only the kitchen of Mr. White can serve a goose. Mr. White was elated. His home is known as 'The House of Hospitality' in Emporia. I heard William, Sr., whisper to Bill, Jr., on the way home: 'Bill, we gotta goose, by gosh! We gotta goose!'

No such meals were ever set before kings. There is a touch of European court days about the White cuisine. 'Bill prides himself on the table he sets,' his friend, former governor Henry Allen, told me.

Mr. Allen showed up in time for goose and gossip. There was table-talk of *The Martial Adventures of Henry and Me*, Mr. White's war book. There was talk of that little friendly bout between Bill and Henry, when Governor Henry tried to put his friend Bill in jail during the railroad workers' strike and the régime of the 'Industrial Relations Court.'

There was talk about Editor White's campaign for governor.

'I don't know what I'd have done if they had elected me,' said the erstwhile candidate with a grin. 'I had a lot of friends and a lot of votes. Several colored girls were talking here in Emporia, and one asked the other for whom she intended to vote. "I'm voting for Mr. White!" Second question was, "Is there any other candidate?" The third girl said, "Yes, I guess the white folks has a candidate too!" '

After dinner there was more gossip. There was a walk in the White garden. Mr. White described it as an 'educated garden.' 'It looks better in the summertime. Come out and see it then.'

There was talk about the proposed waterway from the St. Lawrence to the Lakes, and what an empire it would make of the Midwest. I gathered that these two Kansas editors, Mr. Allen and Mr. White, were for it.

There was a visit to the study upstairs. On the walls were autographed photographs of William Dean Howells, a dozen Roosevelt pictures from hunting outfits to full dress, always with White in the group. More talk of books and the story of how White's mother had read Dickens and Hugo and George Eliot to him before he was ten, in spite of a practical father's protest, 'Mother, you'll spoil that boy reading so much him.'

There was news that White was born Emporia; that he lived there for a few yea when the family moved to Eldorado. The was a memory of watching his mother wa dishes in the kitchen, and learning to re his letters from the headlines of the count newspapers with which the walls we papered. And that is another tale of t trend of a mind and a soul.

'It got too sophisticated in Empori that's why we moved to Eldorado. Then came back to Emporia to college. Then on Lawrence to be classmate with Verne Kellogg, Fred Funston and Senator Boral then to Kansas City as a cub reporter. The to editorial writing on the *Star* under Nelso —and then here forever!'

'Such are the short and simple annals the poor,' commented Sinclair Lewis.

There was talk of Mr. Lewis and h books. Mr. White said: 'I liked *Mai Street* because, at last, some one had tol the story of the sordid exterior of the sma American town, and the struggle one has t keep one's soul's integrity. I liked *Babbi* because it was a great tragedy like Job' *Arrowsmith* was the greatest of them all be cause it is the tale of a man who fought fo truth and ideals.'

Then there was talk of religion and im mortality around the great woodfire in th White living room, with Mr. Allen and th parson 'defending the faith' against Sinclai Lewis and Bill White, Jr., with Willian Allen White a silent onlooker, pacing th floor of that ample living room, like a rest less lion. Came midnight and the ex governor must catch a train back t Wichita.

THE hospitality of an old southern mansion! Breakfast of sweetbreads o toast. A smiling host—and another da with no Rotary clubs or chambers of com merce to claim attention.

Last and most beautiful of all, a climb to the third floor of that roomy old mansion for a brief visit with Mrs. White, confined t her room because of a nervous breakdown but requesting to see her guests in spite o the doctor's orders. Just two minutes with Mrs. White; a word about Mary White, a fleet but burning memory of a comrade woman, keen of intellect, beautiful of fea ture, with shining eyes, misty with the memory of Mary White; a welcome as warm as spring sunshine; an invitation to repeat our visit which made one feel that she meant it; a full appreciation of each of her visitors that was complimentary. Then I knew why it was that William Allen White had dis appeared every hour or so while we were in the house. He had gone up to the third floor where the invalid lay to tell her about the visitors, what they were like, and what they were saying. Then I knew why William Allen White carried Mrs. White's tray each meal himself rather than allow the servant to carry it. Then I knew why he said to us 'You must meet Mrs. White. She's the best of us all!'

And before any of us knew it, the two-day visit of the author of *Main Street* with the editor from 'Main Street' was over.

Can you afford to be without one?

Just think—for only 50 cents you can carry in your car a genuine Goodyear Silver Back Tube Repair Kit! Then, no matter where you may drive, you are insured against the distress and delay of punctures, and such mishaps.

You may never have to use it—especially if your casings are thick, stout Goodyear Cords—but there's certainly 50 cents worth of peace-of-mind in knowing that you're ready for the emergency.

The regular size kit contains a generous piece of Silver Back Repair material, with a tube of Goodyear Cement. The large size ($1.00) contains a larger piece of Silver Back, cement, a pair of scissors for trimming, and spare valve-stems and -caps.

Both kits are packed in sturdy metal containers so that they may be carried under the seat, in the tool box, or door pocket without damage or loss. The container tops are made into efficient, easy-working buffers.

You certainly should carry a Goodyear Tube Repair Kit. Buy it from your nearest Goodyear Dealer.

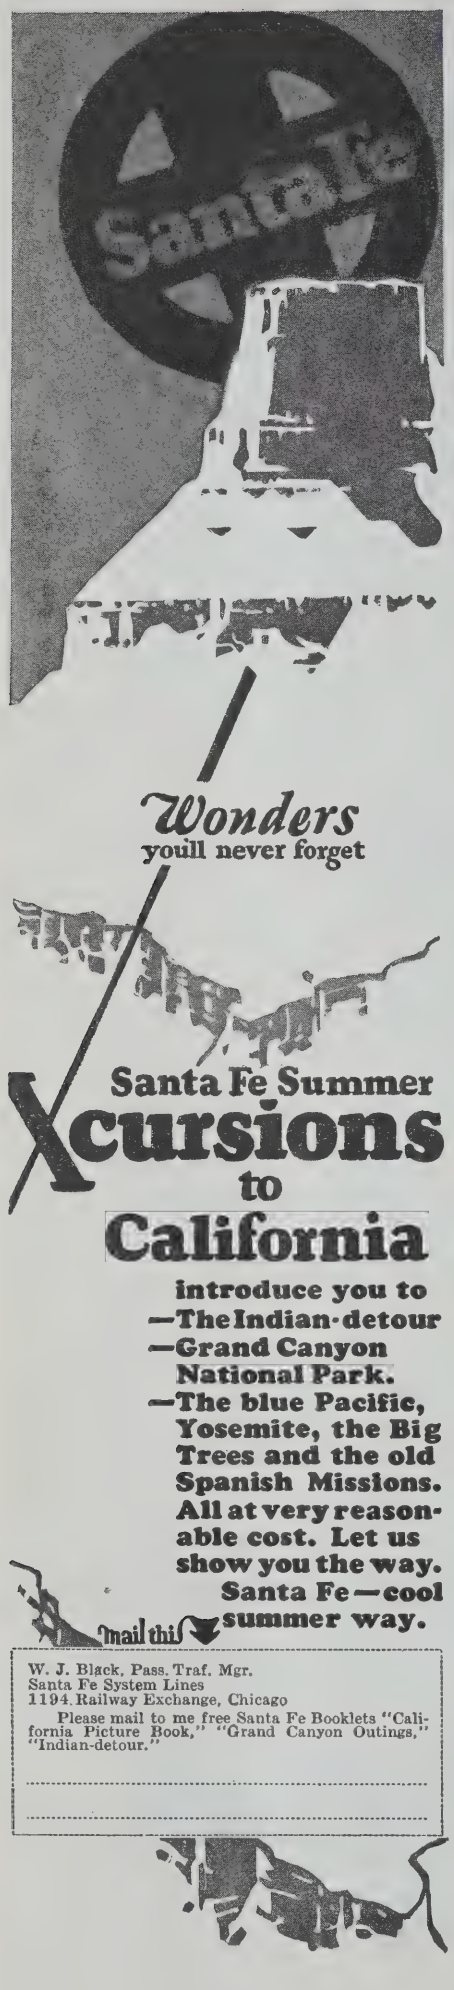
TUBE REPAIR KITS



Concerning Biography

(*Continued from page 8*)

cannot be done; if they were foolish to begin with the public would have known it and biography would take a slump. What was done in the case of Queen Victoria was very simple; a collection of her *Letters* was published which left Strachey gaping foolishly.

Biography deals with the three kinds of fame, that of birth and rank, that of achievement, that of circumstance:—' . . . born . . . ,' ' . . . achieve . . . ,' ' . . . thrust upon them . . . ' I should say that the first includes royalty, the second science, the arts, industry and finance; the third, politics. Under the first head, modern biography has dispelled the worshipful notion that to be born in a palace insures greatness—though some have been Great in spite of it. There will be few revisions under the second head; the Great in science, art and industry will not be put down by belittling pens. But considerable revision has already been done upon the popular notion that mere accumulation of vast fortunes is in itself a claim on social respect. So that the usefulness of the new biography in giving a more correct *valuation* as between fame and greatness should not be underestimated. This man was a king, but a poltroon; very well. It is his value as a man that we want. Then, again, there are the great personifiers of events—the Cromwells, the Washingtons, the Gladstones, the Cavours, the Lincolns. How much was in *them*, how much in the *event?* We need to know that. Young men especially need to know that events do not create greatness, but conscript it. 'The ambushed hour' should be remembered at the back of every live mind. Did not Woodrow Wilson say, 'It behooves all minor authors to realize the possibility of their being discovered some day, and exposed to general scrutiny. They should live as if conscious of the risk.' The *biography of evaluation* is therefore a profitable field for a young man's ranging.

Then there is the *biography of inspiration.* It survives the biography of degradation. As Dr. Barton has pointed out, endless streams of inspiration have flowed from the Cherry Tree story of George Washington, but a whole library of Rupert Hughes' Washingtons would be but multiplied sterility. One test of truth is its inspirational quality; it is positive and energizing. Parson Weems will live when Mr. Hughes is forgotten. It is purely a copy-cat literary fad to damn the believer and exalt the scorner.

I ENCOURAGE boys and girls to read the lives of the doers in every field. Begin with A and let them read the lives of the great actors—I prefer to call them Players, to distinguish them from the showmen. It is a full course in application, sincerity and gentlemanliness to read the life of such a Player as Forbes-Robertson's *Player Under Three Reigns* (Little, Brown and Co.); while the life stories of themselves as written by Otis Skinner (*Footlights and Spotlights*, Bobbs-Merrill Co.) and George Arliss (*Up the Years From Bloomsbury*, now running in *The Ladies' Home Journal*)—I mention only three recent ones that come to mind—will reveal the Theater in a light that should grow general. Forgive me if I do not mention Maude Adams; her recent essay at autobiography *One I Knew Least of All*—was insufficient.

I would show growing youth pictures of every field of work. I would not forget the Church. The Lives of John Wesley, St. Francis, Henry Ward Beecher, Alexander Whyte, Phillips Brooks—or any of the nobler of the American Circuit Riders—are indispensable to an understanding of the ways of men in the world in which youth is to grow mature. Let him tread the romantic paths of Medicine, in company with Reed, Gorgas and Dr. Osler. Harvey Cushing's *Life of Osler* is none too large, though it has been criticized on that score. Open the doors of science, the arts and history with Journals, Diaries, and Autobiographies. The boy will learn more from Pepys, Benvenuto Cellini, Professor Bowers' *Party Battles of the Jackson Period*, Father Campbell's *The Jesuits*, Preserved Smith's *Erasmus*, the *Life of Robert Owen*, than from many histories. These are life. They are not platforms from which self-conscious and pushing biographers exhibit themselves. Beware of the biographer who stars in the part, who makes his subject a 'super.' He is of the dregs of a transition period.

The idea is that we cannot overestimate the inspiration of biography, and there is no key more universally successful in making our youth freemen in their world.

The *biography of information* is largely casual, but useful, and good work is being done in it. I exclude, of course, the propaganda—a good word ill-used—which too often mars it. Since John Hay, for example, no President has been well written about by his secretary. In this connection, Tumulty's *Woodrow Wilson* and other recent books of more recent Presidential secretaries, come to mind as useless work. On the other hand, take the book of a great London editor—A. G. Gardiner's *Portraits and Portents* (Harpers, $3). Here are thirty-seven personalities—only two of them American—President Coolidge and Mr. Henry Ford—limned in lifelike lines, each with that little trick of eye, speech, action or attitude that puts us within the circle of acquaintance. If all are as well portrayed as those whom I have personally met, I must say, here is a living gallery. Names give way to genuine men and women. The British excel in this, probably because they have outgrown the notion that an opponent is a fool. America was not content until somehow it demolished William Jennings Bryan; England labels Dean Inge, but is proud of his stature. More probably, however, the reason is this: the political personage is no longer the great man here in America, and our writers have no technique for understanding and portraying the type of man that is. Our pens are not tuned to the dramatic qualities of industry and finance. Hence our informational biography in this American field, with a few exceptions, is unrelieved balderdash, either in the key of praise or the key of denunciation.

Why cannot we do something like A. G. Gardiner's work in the United States? Have not we the subjects? Or is it that we lack

writers? I remember only one burst of
r frankness with reference to contem-
raneous Americans in a group; that was
e anonymous *Mirrors of Washington.*
litical, of course. It had imitators, but
ey assumed that 'truth' in personal
lineation consists in divulging the fact
t this one played poker and that one
casionally bet on the horses. Of course,
h pokerish and horsey individuals, this
all right, but with men who have gone
h by other routes than the green baize
d the turf, it is all wrong. I have had my-
f the doubtful privilege of seeing some very
hly placed gentlemen in the Government
d elsewhere being, for the moment, their
n unvarnished selves, but a gay moment
1 a. m., with a famous Amendment
newhat disregarded, is very far from
nprising their personality or their biog-
hy. I rather think we do not see our
ntemporary and temporary leaders as
y are, and perhaps the temporariness
s much to do with it. We make our
roes overnight and send them back to
livion the next day. The blessing in that
it prevents a surplus of biography. And
t a little more of the fair and shrewd in-
rmational kind, not to elect or defeat
ybody, but to introduce us all around,
uld be a happy thing.

Where Shall I Go Next?

(*Continued from page 2*)

sift inroads on territory like that of
ntral China. Had this been done in the
t hundred years the century's total
entific progress through exploration might
ve been achieved in less than ten
ars!

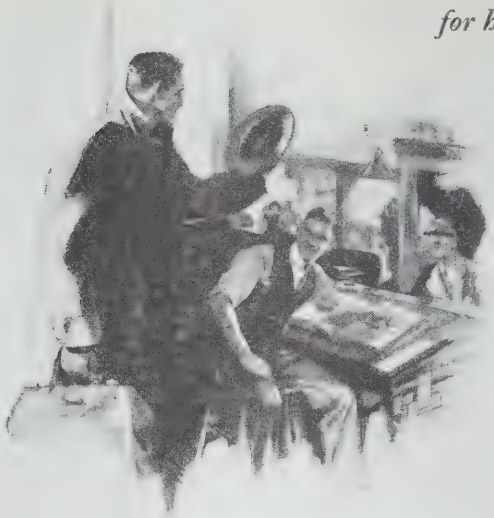
Another thing I have in mind is to visit
ne of the areas in the world, especially
our own country, which people now avoid.
ke a place near home, right here in our
nerican deserts.

The word desert has come to mean an
favorable place barren of all items like
d and water that would support life.
wn through Arizona and New Mexico
d in certain parts of California the
sert regions often have ideal climates
th nights cool and days that are mild
r many months of the year. A great part
that desert would burst into blossom if
ter were only available. It is conceiv-
le that in the coming generation vast
eas of desert land will be developed which
w are a total loss to the country. Scien-
ts claim that if our climate could be
ered so as to give the Far West the same
nfall that New England has, our Ameri-
n deserts would become a series of
radises.

Incidentally, good water is available in
ny parts of the desert by going down
ly a few hundred feet. Fifty years ago
is fact was unknown. Thus by drilling
d using a windmill rich farming areas
ve been opened up in many places.

My idea isn't just to fly around and look
such areas for the fun of it. I believe
th proper surveys and geological in-
stigations made possible by quick air-
ne work the development of numerous
cts of waste lands in the United States
y be greatly hastened.

'He is leaving to work *for himself* at Venice'



Building Independence

out of Sunshine, Friendship and Fun

AFTER all it isn't such a bad world—when a national organization such as the Brotherhood of Locomotive Engineers deliberately develops a community among the most beneficent living and working conditions made possible by Nature, brains and cash.

Back of all the excitement about Florida there has been the age-old truth of a remarkably productive combination of sunshine, soil, temperature, rainfall. There are speed-crops in various areas and one of the most favored of these is the Myakka Valley that lies back of the model City of Venice directly on the Gulf.

Maybe you should recast your ideas of this Summerland a little, for Brotherhood capital has assembled here every factor for a modern ideal farming community backed by the advice of the Venice Farm Board which operates the Venice Demonstration Farm, the Venice Nursery and the Venice Dairy Farms.

Venice Farms are located on good roads, in easy distance of the city; they have main drainage available, are cleared and ready to plant. Venice crops are among the earliest and bring the highest prices in the big Eastern markets.

Venice Farms are sold at moderate prices on liberal terms. It is possible to make a farm pay for itself in a few years, years of sunshine, friendship and fun.

Venice Florida,

Venice a Natural All-Year Resort

VENICE life is divided between agriculture, industry and resort activities. Here's the West Coast's only mainland beach; its most famous fishing grounds; a modern city planned and built by experts, and what visitors call the largest, most comprehensive farm development ever projected in America.

THE VENICE COMPANY
Owned by the Brotherhood of Locomotive Engineers

Intimate Glimpses of ELBERT HUBBARD

By JAMES W. BECKMAN

ELBERT HUBBARD had the most retentive memory of any person I ever knew. He made virtually no notes. Only occasionally would he ask me to write down a name or date. I recall my fears on the first trip that we had gathered no material at all out of which to write stories. Then on arriving back in East Aurora, he started one article after another and dictated them all from memory. I was amazed at the ease with which he did it.

One of the many illustrative instances of his remarkable memory occurred on a rainy night when we were hurriedly changing cars at a small station in Pennsylvania on our way to Harrisburg. In the dim light that glimmered through the drizzling rain, a man came to us, reached out his hand and said,

'Hello, Mr. Hubbard, how are you?'

Hubbard turned and greeted him as an old friend whom he had not seen for years. The man said:

'I've got you this time; you do not know who I am.'

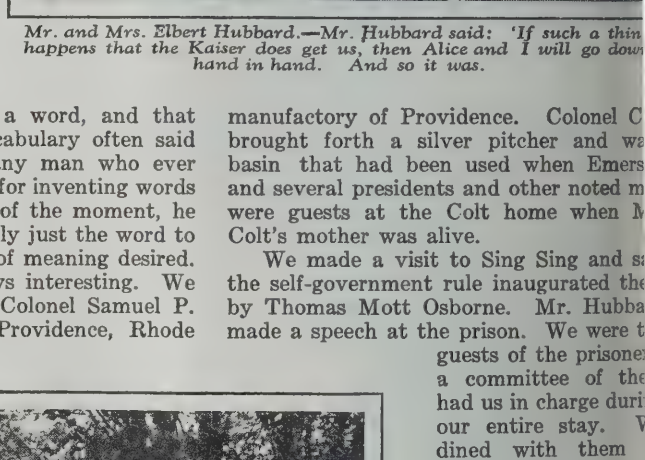
'Oh, yes, I do!' replied Hubbard. 'You are —— ——,' and he spoke his name (I do not recall it now) and told where he had met him. It had been twenty years previously that he had seen the man, and then only once at one of his lectures in the town where the man lived. He even recalled the name of the hall where he spoke and the details of the occasion. And then he asked:

'How is the little girl, the one who was sick?'

The man replied with pride: 'Oh, she is fine. She is a full-grown woman now and is to be married in June.' And Hubbard extended his best wishes. He seemed as happy over it as the father.

People wondered at the immense volume of work which he did and how he had time to write so much. Elbert Hubbard had none of the supposed weaknesses of genius. He worked systematically, incessantly, and with tremendous speed. His mind never lagged, and he turned from one thing to another with utmost facility. Rarely did he hesitate for a thought. So far as anyone knows, I am the only person who ever had the honor of supplying him with a word, and that only once. From a vocabulary often said to be the greatest of any man who ever lived and with a faculty for inventing words of his own on the spur of the moment, he was able to draw instantly just the word to convey the exact shade of meaning desired.

Our trips were always interesting. We visited at the home of Colonel Samuel P. Colt, at Bristol, near Providence, Rhode Island. Mr. Colt was the man who org ized the United States Rubber Compa Among those at the home of Colonel (were Governor Beeckman of Rhode Isl and Samuel Nicholson, president of a l



Mr. and Mrs. Elbert Hubbard.—Mr. Hubbard said: 'If such a thin happens that the Kaiser does get us, then Alice and I will go dow hand in hand. And so it was.

manufactory of Providence. Colonel C brought forth a silver pitcher and wa basin that had been used when Emers and several presidents and other noted m were guests at the Colt home when M Colt's mother was alive.

We made a visit to Sing Sing and sa the self-government rule inaugurated the by Thomas Mott Osborne. Mr. Hubba made a speech at the prison. We were t guests of the prisone a committee of the had us in charge duri our entire stay. W dined with them noon, eating regul prison fare. Th showed us all throu the prison and t antiquated cells, son of which were six fe long, six feet high a four feet wide, a where often two a even three and fo prisoners had bee forced to stay togethe The cells were dark a poorly ventilated. The locked us in one them just to give us t thrill of being locke up in Sing Sing.

In some of the min

Exterior of Roycroft Inn. It is evident that the keynote is comfort.

ork that Elbert Hubbard did numerous ersons wrote things to submit to him, nd suggested ideas for him to dress up, uch as a sculptor has assistants to cut the one to scale for his statues. Some of these eople thought that to submit suitable uff it was necessary to have it a mass of everness and smart remarks. I recall how ngry he was over one such article which as full of attempts at cleverness.

'The trouble with most of these people ho try to imitate my style is that they try be clever all the me,' he said. 'The ay they write, eople would think was a smart aleck ways trying to be nny. Epigrams me only inciden- lly to the regular ne of thought. I on't try to be smart. an epigram comes hen I am dictating, ll right; but I don't nsciously strive for as these writers do.'

As a matter of ct, many of Elbert ubbard's best epi- rams were created s he revised some nger sentences into ort ones.

In keeping with is progressive tend- ncies, Elbert Hubbard adopted simplified elling for *The Philistine*. He did not dopt its use in *The Fra*, however, for, as he id, that was a magazine in which contri- utions of others appeared as well as his wn. So he confined simplified spelling to ne magazine that was his personal mouth- iece.

It was part of my duty to revise the aterial he dictated, when transcribing my otes, and to make any improvements that could. When I gave the typewritten copy him, he would revise it again, many times ith so many changes and interlineations at it was difficult for me to unwind them. he recopying was usually done by typists, nd then I went over the manuscript again, aking any corrections that I felt would be eneficial. Mr. Hubbard would again go ver it and this process was kept up until he finished product was faultless. I have nown some articles to be revised a dozen mes and more.

The last thing Elbert Hubbard wrote r publication was a story about his friend, Grenville Kleiser. It was dictated to me in about an hour at the end of a busy day—his last day at East Aurora—just before he started on a trip South to deliver a few last lectures prior to sailing on the *Lusitania*. It was the last thing Elbert Hubbard ever wrote. It was dictated on the evening of April 26, 1915. Elbert Hubbard left almost before daylight the next morning. He never saw the transcription of my notes. After he had dictated the article to me, he said:

'Beck, I will leave this for you to correct and put into shape. Make the sentences short and snappy. You know how I would do it, anyway.'

And thus did I complete my last task for Elbert Hubbard, for whom it was a pleasure and a privilege to do, because it was appreciated.

It was Elbert Hubbard's ambition to write a book about the World War that would be the crowning masterpiece of his life. It was his plan that I should go with him so that as much as possible of the book could be written on the scenes of action. Arrangements had been made for us to meet the foremost governmental officials and commanders of the Allied armies. H. Gordon Selfridge was to have been chairman of the committee to receive Mr. Hubbard. In his contemplation of the task Hubbard was as full of enthusiasm as a youth eager for the thrills of adventure. He joyed in achievement, and this was to be the greatest achievement of all. Only the plans of Mrs. Hubbard shortly before the sailing date prevented me from making the trip. I went over later, however, as a volunteer in the Twenty-second New York Engineers.

In his farewell talk at the Roycroft Inn on Sunday evening, April 25, 1915, after speaking with his usual good humor, he brought his speech to a close with a tribute to the Roycroft workers.

'I am prouder today of Roycroft and Roycrofters than ever I was,' he said. 'I am privileged to have men and women about me who are capable and trustworthy.'

He pointed out how the Roycrofters should continue their work even if the ship were sunk and he lost at sea. He was warned and urged by many of his friends not to make the trip; but he was not afraid.

With sudden change of mood, at which he was a past master, he said with a sincerity that almost stunned:

'If such a thing happens that the Kaiser does get us, then Alice and I will go down hand in hand. We will not be separated. Either both of us will come back, or neither of us will. One will not return without the other.' And so it was—for on May 7, 1915, came the tragic end.

A few years before when the *Titanic* went down, Elbert Hubbard wrote a tribute to Mr. and Mrs. Isidor Straus which only he could write. The words were almost prophetic of his own tragic end:

'Mr. and Mrs. Straus, I envy that legacy of love and loyalty left to your children and grandchildren. The calm courage that was yours all your long and useful career was your possession in death. You knew how to do three great things: you knew how to Live, how to Love, and how to Die.'

In a way it seemed fitting that Elbert Hubbard's eternal resting place should be the sea. He loved the sea as few men do, and loving it, he wrote what might have been his own valediction:

'The sea knows all things, for at night when the winds are asleep the stars confide to him their secrets. In his breast are stored away all the elements that go to make up the round world. Beneath his depths lie buried the sunken kingdoms of fable and legend, whose monarchs have long been lost in oblivion. He appropriates and makes his own all that is—dissolving the rocks that seek to stop his passage—forming, transforming, rearranging, never ceasing, tireless. Tireless ever, for he gets his rest in motion. With acute ear he listens along every coast and lies in wait for the spirit of the offshore wind. All rivers run to meet him, carrying tidings from afar, and ever the phosphorescent dust from other spheres glimmers on his surface.

'It is not to be wondered that men have worshiped the ocean, for in his depths they have seen mirrored the image of Eternity—of Infinity.'

Sapiro Sues THE DEARBORN INDEPENDENT

(Continued from page 7)

the Sapiro plan. The Sapiro plan, I think the evidence will show, has since come into very, very wide use throughout this country.

'So, bit by bit, and place by place, the farmers of almost every state in the United States had summoned Aaron Sapiro into their midst, and had asked him to expound for them his ideas, and his doctrines, and his principles, for the application of coöperative marketing to the problems of the farmers.

'Perhaps I can describe in a very few words, and do so accurately and faithfully, the extent of this man's activities, and the degree of prominence he has achieved, by reading to you the defendants' own characterization of Mr. Sapiro's activities during this period.

'They say this about him:

' "The plaintiff for some years past has been in the business of developing, organizing and directing the activities of a certain type of coöperative marketing association throughout the United States. His activities have been so closely associated with such organizations, and he has exhibited said plan publicly through the various states of the Union, that the plan upon which these organizations were based has come to be known as the Sapiro plan. A very great number of these associations have been formed among the farmers of the United States.

' "They have been formed in most of the important farming districts of the United States. The organizations developed under this plan and through plaintiff's activities in connection with these organizations had come to affect the production and distribution of many of the agricultural necessities produced by the farmers of the United States. By reason of these facts, the plaintiff, Aaron Sapiro, had become one of the most conspicuous and outstanding figures connected with coöperative marketing of agricultural products." '

FOLLOWING his recitation of Mr. Sapiro's career, Mr. Gallagher took up a discussion of the alleged libelous statements published in THE DEARBORN INDEPENDENT and spent an entire day in going over these, reading each to the jury and denying them on behalf of his client, Mr. Sapiro. Mr. Gallagher's discussion of particular paragraphs from THE DEARBORN INDEPENDENT filled 112 typewritten pages. He declared that contrary to the statements that Mr. Sapiro was the leader of a 'Jewish ring' seeking to exploit the American farmers, evidence in the case would disclose that he was a man of marked ability in the matter of coöperative marketing and that his services were sought by farmers' organizations in various parts of the country.

Several times during the course of his statement, Mr. Gallagher became argumentative, bringing objections from Senator Reed.

In one instance Mr. Gallagher said:

'Now, in the course of the publication of these libels they sought to add sting to some of these aspersions upon him and upon his people, by attacking his conduct as a lawyer.'

This brought an immediate objection from Senator Reed, who in addressing the Court said:

SENATOR REED: Now, if your Honor please, I must object and ask your Honor to caution counsel this is not a case which attacks a race of people and it is evident from the plea. We get it here again, and counsel has been proceeding practically in violation of the Court's injunction for some time. I do not want to interrupt my brother, but we are listening to an argument instead of a statement of facts and we are listening to an argument far beyond that permitted and it should be excluded.

THE COURT: The members of the Jury will understand, of course, that the argument will succeed and not precede the taking of testimony, and any statements made by counsel that are argumentative should be disregarded by the Jury. The function of the opening statement is merely to state in a plain, unimpassioned way the evidence which counsel hopes to produce before the Jury for the purpose of establishing his case, and it is not proper to indulge in argument before the Jury, and so far as the statement is argumentative the Jury should disregard it. I trust counsel will confine himself within those bounds.

SENATOR REED: The last sentence of counsel, where I interrupted, where he said it was a sting in this article against plaintiff and his people, is distinctly crossing the line.

THE COURT: Those words 'and his people' I think should be eliminated from the statement. The jury will understand, and I think I may as well say at this time that there is no such thing known to the law as the recovery of damages for the libel of a race. It is only when the alleged libelous statements refer to individuals that the law permits any remedy or recovery whatever in the way of damages. You must distinguish at all times in this case between an individual and a race. One can criticize theories, plans and schemes and organizations and parties, races, religions, and enjoy a large part of immunity in so doing. It is when he charges, or the claimed libels apply to individuals that they become a subject for the consideration of courts and juries. So that so far as counsel refers to libel of races the statement should not be considered by the jury. Evidence of that type will not be admitted.

In closing his statement to the jury Mr. Gallagher said:

'The evidence will indicate that Mr. Sapiro's activities as a lawyer for these various coöperatives is itself not merely country-wide, but extends even beyond the boundaries of the United States. Various provinces of the Dominion of Canada have called upon him for his services. During this time the organizations for whom he has been called upon to act as lawyer, have been organizations, as the evidence will show, both great in number and tremendous in the scope of the business they conduct. Thus, the Burley Tobacco Growers, starting out with 50,000 members, is 100,000 members in extent today, and does as high as $30,000,000 business a year.

'In the eleven cotton-growing states in which organizations have been perfected, there are upwards of 200,000 farmers banded together in these organizations, doing upwards of $100,000,000 business in a year.

'In the three wheat-growing states of the Dominion of Canada which have called upon Mr. Sapiro for his skill and his attention and experience, upwards of 120,000 farmers have been joined together in an organization doing almost a quarter of a billion dollars of business in a year.

'The character of the services required by these gigantic organizations calls for the most expert and the most skilful brains that can be had in that line of work. The importance of the work that is called for justifies and is followed by the payment of fees that are in proportion to the character of the work.

SENATOR REED: Wait a minute. If your Honor please, I submit that is purely argument.

THE COURT: I think that is argument. It is drawing conclusions from the facts.

MR. GALLAGHER: I will put it in this way then—it is just a matter of the way it is phrased—the evidence will show that the services of Mr. Sapiro are required by these organizations upon many matters of great importance and that fees are given to him of large degree and were enjoyed by him, from various organizations from time to time throughout his activities. During this time his activities as a lawyer not merely were given among the farmers themselves in their various communities, but in a dozen different states he has been called upon to appear before the Supreme Courts of those states in defense of the principles of coöperative marketing that he has evolved, and even before the Supreme Court of the United States of America. Thus the evidence will clearly indicate to you the preëminence that this man has attained in his profession.

When these attacks were made upon him, or were begun to be made upon him, he was in the very prime of the professional man's life—forty years of age. As a matter of law, he had a right to expect that he would be permitted to reap in his profession—

SENATOR REED: That is argument, if your Honor please, again.

MR. GALLAGHER: It is a statement of the law that I have a right to make, and it is not argument at all.

SENATOR REED: That as a matter of law he had a right to expect certain things?

MR. GALLAGHER: There isn't any doubt about that.

THE COURT: Read the statement, Mr. Reporter.

(The statement was repeated by the Reporter.)

THE COURT: Proceed.

MR. GALLAGHER: The fruits of his studies and his time and his labors, without any unjust, uncalled-for, unwarranted attack being made upon him by any individual or group of persons. The evidence will indicate that such an attack was made, and when this evidence is all laid before you for your consideration, we will expect you to return in his favor a verdict fairly proportionate to the damage which you are satisfied has been inflicted upon him in these uncalled-for attacks.

SENATOR Reed began his opening statement for the defense immediately following Mr. Gallagher's closing, and went into much detail in explaining to the jurors what the defense proposes to show regarding Mr. Sapiro's activities in promoting coöperative marketing. His statement, in part, was as follows:

SENATOR REED: If your Honor please, and you, ladies and gentlemen: I shall try, the best I may be able to do, to give you an outline of the facts in this case as they actually exist and as we expect to show by the evidence upon the stand.

Since counsel for the plaintiff spent some time in telling you what the issues would be, I may be pardoned for taking just

few moments to tell you what we think e issues will be and are, although in the d his Honor, in the instructions he will ve you, will tell you what the law of this se really is.

But there are certain things which I ink I may venture upon. Before I do that me say to you that I, of course, have the advantage of being a stranger to you all, d I hope that you will bear with me if I ake the mistakes which strangers are metimes prone to make.

Now, first, what is this suit? This is the se of Aaron Sapiro against Henry Ford d The Dearborn Publishing Company. is is not the case of the Hebrew race ainst Henry Ford and The Dearborn blishing Company.

I think his Honor will tell you that the brew race is not here bringing this suit, d that Mr. Sapiro has no right to come re and recover damages for the Hebrew e, and put the money in his own pocket, damage done to himself.

HIS is not the case of Farmers' Co-erative Associations against Henry Ford d The Dearborn Publishing Company. ey are not here suing. If any damage has en done to them, that is a matter for other tribunal, and another time, and Mr. piro cannot recover damages, if any were ne, to the Farmers' Coöperative Organiza-ns and put the money in his pocket and lk away with it. This is not the case of vernor Lowden, or Mr. Lasker, or Mr. ruch, or Mr. Lazinski, or anybody else. ey are not here suing.

This is the case, I repeat, of Aaron piro, or Shapiro—I do not know just ich way it is pronounced——?

MR. GALLAGHER: Sapiro.

SENATOR REED: Sapiro—in which he is king for a million dollars for alleged in-y to himself. That amount of money asks to recover, not because he has ffered, as I understand his pleading, a llion dollars damages, but he wants to cover all that he may have suffered, if he ffered at all, and then he wants a lot more top of that by way of smart money, for nitive damages. That is the way I erpret his petition.

So we start out with the question now, d my statement of facts will be directed that, of Mr. Sapiro's connection with this se, and the connection of the defendants th the case.

There is another proposition that I ght to mention. I think the evidence in s case will show you, ladies and gentle-n, that Henry Ford never saw these icles; that he has never read them to this ssed hour; that he is the President of e Dearborn Publishing Company is true, t that is a corporation, and that Corpora-n printed these articles, and there will no dispute at all about the language ving been printed that is alleged in the ition as having been printed. I say tition'; 'Declaration,' I believe, is the m that should be used here.

Now, that is the act of the corporation, d not the act of Henry Ford.

So that, as we proceed in this case, you l observe that it narrows itself down into question of whether this man has been ured by the publication of THE DEAR-RN INDEPENDENT, one of the defendants this case, that is, whether he has been ured by that corporation. Now, Mr. llagher told you that there were questions privilege in this case, and he defined in his n way what constituted privilege. It is right of a newspaper to print the news, d even sometimes to print, as Mr. llagher said, statements that may not absolutely true, if they are printed in d faith, and for proper purposes.

I believe that was Mr. Gallagher's own finition, at least it was approximately that.

MR. GALLAGHER: Let me correct you on that. I never said that.

SENATOR REED: Well, I won't argue about it. I wrote it down. But anyway, whether you said it, or I said it, the Court will tell the Jury what the law is.

But, there is one class of privilege that is absolute, and that is the privilege of printing the truth, and you, any citizen has the right to speak of or concerning another the truth, no matter what it may be; and any paper has the right to print of and concerning another the truth, whatever it may be. The law puts no bridle in the mouth of truth.

And so we claim here, and shall try to show you that what has been printed of Mr. Sapiro in all of its real essence was the truth. And as this case develops we think the evidence will show you, and that the law as given by the Court will be, that it is no libel to say truthfully of a man who is a Jew that he is a Jew, and that reduced down to the real situation, this is the same kind of case as it would be if Mr. Sapiro happened to belong to some other race than the Jewish race, and I am casting no reflections upon him because he belongs to that race.

Likewise we think the Court will tell you that Mr. Sapiro cannot capitalize and recover here on any sympathy that may be felt for the people of his race. He stands here as an individual asking for a million dollars of money from these two defendants. That is what we are going to try in this case.

Now, the evidence will show you that much of the language complained of are mere sentences or paragraphs taken out of long articles, torn away from their context so that they have quite a different meaning when they are thus torn from the words that preceded and the words which followed, than they have in the articles themselves, and the words in their true meaning are quite a different thing than the words picked out, or, where a sentence is picked out, as it has been here.

To these words, Mr. Sapiro in his declaration—that is this printed paper filed here in court as a basis of the suit, that is what we call the declaration—ascribed certain meanings, but it is not the meaning that he ascribes to these words that controls in this case. The meaning of these words will be determined by you twelve men and women under the instructions of his Honor, the judge.

So that when we get down to trying this case, these words appear with their proper context, and when we have heard the evidence in the case and the instructions of the Court, it will be for you to say whether or not there is anything libelous or defamatory in them. And, if they are true in substance and effect, there can be no libel because THE DEARBORN INDEPENDENT was within its absolute legal rights.

THE evidence in this case will show you that THE DEARBORN INDEPENDENT has, I think, approximately 600,000 circulation, and that circulation, as I understand the facts to be, is very extensive among farmers. The paper is partially of a magazine character, carrying articles upon different subjects; it deals very considerably with agricultural problems and is taken very largely among the farmers, and in the small towns and villages of the country.

It, therefore, is in a situation where it owes a sort of moral duty to these people who subscribed for it, to print any news that was of particular interest to the farmers of the United States. And if there was anything wicked or wrong or oppressive being done to these farmers it was the special and particular business of such a paper to print the facts. Indeed it may be said to be a part of the duty of every newspaper, if such a condition exists, to print the facts. But, to a paper that circulates largely among the farmers a peculiar and special duty rested upon that paper.

We expect the evidence in this case to show you beyond peradventure of a doubt that these articles printed concerning Mr. Sapiro were printed in good faith; that they were not printed in malice; that they are reasonable—that every reasonable precaution was taken to ascertain the truth of these articles.

* * *

WE WILL show you, ladies and gentlemen, that Mr. Sapiro who sits here is not a farmer. I think the evidence will show that he was born in the city, grew up in the city, that he never owned a farm in his life; possibly he acquired one during the course of his operations. That at the time he entered upon those enterprises I am about to describe he had never planted a hill of corn, plowed a furrow, sowed an acre of grain, or been in any way connected with the practical proposition of farming. There was nothing in his life to cause him to enter upon this work because of a sympathy springing from his experience as a farmer. He was a city boy or man; a city boy, and grew up a city man.

Now, in 1915, a man named Weinstock was appointed State Marketing Commissioner of the State Rural Commission of California. I do not know just what that position embraced in its duties, but it had something to do with the marketing of farm products. Sapiro volunteered as legal counsel for Weinstock and the Association. Now, I do not say it was any reflection upon Mr. Weinstock, but it happens that Mr. Weinstock is or was a member of the Hebrew race.

Part of Mr. Weinstock's duties as the marketing commissioner threw him in contact with the farmers.

So they had in California certain associations of people, of farmers, who had these little associations to help them market their product.

Now, these were old problems as we will show you, and these associations existed there and they existed elsewhere. Some of them existed before Mr. Sapiro was born, and perhaps some existed before I was born—not in California, necessarily, but elsewhere.

Well, these farmers had discovered, as everybody else discovered, that their plans would not work with perfection, of course. They wanted to do better. They consulted with Mr. Weinstock more or less about it, and Mr. Weinstock introduced these farmer folks to Mr. Sapiro, who was acting as volunteer counsel, and in 1917 Mr. Sapiro prepared the articles of association and by-laws for the California Prune and Apricot Growers' Association.

I think the evidence will show you that up to this time all that Mr. Sapiro knew about farming he had learned there through these contacts that I tell you of.

He had become volunteer counsel for Mr. Weinstock and in that way he got in touch with these farmers or fruit growers, and he got this job of preparing their articles of association and by-laws, and I think the evidence will show that for the most part it was a mere change or modification of the old by-laws of these old associations, and that it required no great legal genius, no marvelous new concept, to put together these old ideas. But, I think the evidence will show you that it was about this time that there began to form in Mr. Sapiro's mind, the conception of controlling the organizations of farmers and fruit growers throughout the United States, for the purpose of enriching himself.

And, it was at that time, or about that time, and time is not very material so long

as it is reasonably early, that he conceived this idea of going to the farmers of the United States and the fruit growers, laying before them a scheme for marketing, and telling them that if they would adopt this scheme they would be able to control the marketing of their products, they would be able to fix the price, not the seller and the buyer bargaining over the price, but they would be able to fix it and compel the price to be paid. That in this way they could increase the profit of the farmers to a point where they could all make huge profits. That they could grow rich and prosperous. They could educate their children in colleges. Drive in fine automobiles—not Fords—but fine ones. Relieve their families from hard labor. Live in modern houses. Have bath tubs. And, generally, be happy and prosperous.

That he conceived at this time, or a little later, the idea of organizing the local associations into state associations, of organizing selling agencies for the state associations, of then combining all these selling agencies of the different states into one selling agency for a particular product, mark you, not all products in one, but one for wheat, one for potatoes, one for peanuts, one for cotton, one for tobacco, and so on, and now having got each of these into national associations, that his mind then projected itself across the ocean and that he actually proposed to organize and control at least the wheat product of the entire world. Then he expected to have one Aaron Sapiro, the attorney employed by all of these concerns. The evidence will show you that it was such a dream of wealth and empire as I have described.

NOW, the evidence will show you that his scheme was purely a scheme for the benefit of Sapiro. That was his motive. That he was not a farmer, that his people were not farmers. As he proceeded, the evidence will show, he developed two pet schemes for the purpose of carrying out this grand idea. The evidence will show you that they were schemes devised for the purpose of keeping the control in his hands, one of them was that they were to extend the mere matter of selling the goods on the market to what they call the 'processing' of the goods, that is to sometimes a partial manufacture; sometimes the storing of goods also was contemplated.

Now, to go back just a little, the evidence will show that when he started in to organize these concerns, the general scheme and plan was to go into a community, interest certain parties, generally who were directly interested in selling warehouses, or gaining some advantage, getting up what he called a pre-organization committee. These pre-organization committees would proceed then to interest the farmers, and the whole scheme I shall go into a little later. Having got the farmers interested, the plan was worked out so that the pre-organization committee, which were almost always Sapiro's men, would control the selection of the boards of directors and of the executive committees of the boards of directors. So that he starts in with the pre-organization committee gaining control. One way that this was done was by making it profitable to these people who constituted his pre-organization committee, or his early boards of directors. For instance, he would get together the owners of warehouses and drying plants, and other plants, engaged in the handling of agricultural products. Now, he would bring those people, not the farmers, but the people who were handling the farmers' products, he would bring those people into what he called his 'pre-organization committee.' Proposal would then be made that when they got these farmers organized, the farmers' organizations would take over the plants and factories and warehouses of the gentlemen who had gone in with Mr. Sapiro in the pre-organization committee, and that they would take them over at handsome prices.

Now, the evidence will show that that being the scheme, these people became subservient to Mr. Sapiro, and that while he helped serve them they helped serve him. Connected with that was the further means, we will show you, of tying these people to him, of the recommendations by Mr. Sapiro and the putting over by Mr. Sapiro for some of these warehouse men, and sometimes individuals who had no property to sell, but whose influence was desired, of huge and almost unheard-of salaries to be paid by these farmers' organizations. We will show you that the salaries ran as high as from $30,000 to $55,000 a year, and that these salaries were paid by the farmers out of the products of their lands. That by this and other devices Mr. Sapiro managed to gain and keep control of many of these organizations. And, as I proceed I shall give you many details concerning these matters.

NOW, the plans that he operated on were all very much alike. A description of one of them will, for the purpose of this statement, be a sufficient guide so that as the evidence comes in you can apply it to all. First, the pre-organization committee, picked or influenced by Mr. Sapiro in most instances—of course, all of these cases have their slight variations. Then a crusade among the farmers. Mr. Sapiro—sometimes Mr. Sapiro's men, and from Mr. Sapiro's office, sometimes men on a sort of a flying squadron, sometimes a local man of good standing, went out among these farmers, called meetings, told them the glorious prospect of wealth and happiness for them if they would only join, told them that they could absolutely control the price of products in many instances, and they had prepared a contract for these farmers to sign on the dotted line.

Now, these contracts, as we will show you by the evidence, and we will have some of these contracts here, on a casual reading appeared to be very fair. They provided that a great majority of the board of directors should be actual farmers, actual growers of the products, that they should be actual residents of the district, the members should meet annually to elect, that they could all vote, and they could even vote by mail, the district should always have fair representation, et cetera.

We will show that when they went to these farmers they said to them, 'Now, you will not be bound by this contract unless a certain percentage of the farmers of the district shall sign similar contracts'; that they said to them, 'We cannot control these prices unless we will get into this organization'—sometimes they said 'fifty and sometimes sixty and sometimes two-thirds of all the farmers of the district,' but we will show you that it was left to the pre-organization committee to determine the district, and that it was left to the pre-organization committee to certify when the right number of names had been signed, and that frequently the certificate was made, which made these contracts effective, when, as a matter of fact, there had not been the correct percentage signed up.

THEN we will show you that under these contracts the boards of directors were given very great powers. We will show you that under the contract when signed up the farmer obligated himself to deliver the certain product, let us say potatoes for illustration—that he was made to agree that for a period of years, generally five and sometimes seven, he would deliver to this association all of the wheat, all of the potatoes, or the peanuts or the cotton that he grew—whatever it was; that he was absolutely forbidden to sell any of it on the open market; that he was made to contract to bring that produce to town.

MR. GALLAGHER: If the Court plea we object to these statements, the farm was made to do or forbidden to do.

THE COURT: The form of the stat ment is incorrect.

SENATOR REED: I do not mean it th way, your Honor. I mean under the ter of the contract he was thus bound by t terms of the contract.

MR. GALLAGHER: He agreed to it.

THE COURT: Yes, that statement correct before the jury, but the other one not.

SENATOR REED: That is all I mean. mean when I say 'Under the contract was made to do it,' that under the contra he was obligated to do it. I will try to ke my language absolutely unobjectionabl and further that the contract contain provisions, as I shall show you more detail, that if the farmer sold any of h products, any of the particular produc covered, to outsiders, that heavy penalti could be exacted from him, and that the penalties which he was required to pa under the terms of the contract, generall amounted to about 50 per cent of the tot value of the products. That is to say, som of the tobacco contracts contained a pr vision that if the farmer sold any of h tobacco outside he should pay to th association five cents a pound for all that h sold outside, and that that contract existe when tobacco was only bringing 10 or 1 cents a pound.

AND again, the contracts written b Sapiro contained provisions that if th farmer started to sell his product, they coul go into court and have an injunction issue against him and that they could maintain suit to compel him to deliver his produc and that these contracts ran, as I have said from five to seven years.

The evidence will show you that by a of these contracts, the farmer, insofar as h contracted with reference to any product was absolutely bound by the terms of th contract to deliver to the association.

Then the evidence will show you tha when the farmers' product had been deliv ered to the association, that under thes contracts prepared by Sapiro, the manager of the associations could sell it or not, a they saw fit. They were not to pay thi farmer any cash for his stuff when he brough it in, but the scheme contemplated makin him an advance of a part of the value of th goods, and then the association manager could hold the goods, or they could sel them, and they had the absolute right t sell at any price they saw fit. The evidenc will show you that after he had delivere his products, the farmer had nothing, n right left to say when or how or where or a what price the product should be sold and that all that the farmer got when h delivered his goods was such an amount a the association managers saw fit to pa him by way of what was called an advance ment.

Now, the evidence will show that the the managers of these associations, in orde to get money to pay the expenses of th association, and in order to buy warehouses and in order to make these advancements t the farmers, did go to the banks and borrow money, did go to different financiers, an borrow money.

Now, how did they secure that? Th evidence will show that they hypothecated that is, they pledged, that is, they pawned if you please, this produce that the farmer had brought in, put that up as security fo the loans. That is the way they got th money.

Now, these loans bore interest. An when they came to make the final settle ment with the farmers, if they ever made it they took that interest out of the amoun that was coming back to the farmer an took out all of the other expenses. Th

idence we claim will show that the farmer d pay interest in that way.

Now, just one word further before I into the details. We will show that the n of these organizations was, first, genally, a local organization. Then a state district organization composed of these al organizations. The first local organizan we will show was pretty close, if they d a local organization, which they metimes did have, to the individual mer. When they got the very large anization that embraced the whole state, half a state, or two or three states, the ard of directors, we will show, were the ntrolling body, and had practically dictorial and absolute powers. But we will ow then that the board of directors had e right to select an executive board, nerally composed of from three to five rsons. We will show you that this executive board had all of the powers of the ard of directors when the board of direct's was not in session, and the executive ard was in session all the time, and the ard of directors only met occasionally.

So that we will show that the control s thus in the hands of the little executive mmittee.

Then we will show that in certain inances, at least the attempt was made to nsolidate these regional associations into e general association for the whole ited States. And, as I have said, the n in wheat at least contemplated the ntrol of the wheat of the world.

* * *

NOW, just as a summary, in advance, you please, we will show that in the at majority, if not in all instances, the mers received not the huge profits that . Sapiro had promised, but that in almost ery instance the farmer members reeived very much less from the association an was received by the people who sold eir products on the open market. We ll show that this was due to a number causes.

One of the reasons was that the managers the association, of the management of the ociation, we will show you, was in the jority of instances, the selection of Mr. piro, dominated by Mr. Sapiro, that the nagement would hold the product back m the market, not sell it when the rket was good, as we will show the outsider had the privilege of doing and did; l that having held it a long time, the ociation sold it at much less than the ge of market prices had been to the sider.

We will show that in one instance they mped 22,000,000 pounds of tobacco on market in one day, and that they sold t tobacco for about 30 per cent less than average price received during the year the open market.

Then we will show you another reason. at was the purchase of warehouses, at exorbant prices, generally from men who were in to manage the association, and who, substance and effect sold their own operty through their own agency to these sociations, at prices far beyond the value the warehouses or other plants which y owned. That in a single tobacco sociation these men, largely selected by piro, turned over to the association warehouses in which tobacco was kept stored for re than $2,000,000 more than the plants re worth.

We will show you that these managers in me instances formed partnerships, and in let to these partnerships, in which they re interested, contracts for handling the ducts of these associations, and that they de as unjust and unfair profits out of se contracts immense sums of money.

And, we will show you that Mr. Sapiro was appealed to in some of these instances to bring suits for the recovery of these fraudulent profits, and that Mr. Sapiro declined to serve his clients and to bring such suits.

* * *

We will show you that having developed this plan, the effect of which you will judge, and I am not permitted now to comment upon it, Mr. Sapiro proceeded to the business of selling himself to the American farmer, and I use that term 'selling' in the colloquial sense that it now has. That he called among these farmers and held himself out if not as the Moses to lead them out of the financial wilderness of bankruptcy and into the Promised Land of prosperity, he at least did hold himself cut as the Aaron of the transaction, and that that expression was used.

At the same time, we will show you that Mr. Sapiro had another object in view, namely to absorb under his plan and to bring within his control, the old existing organizations, or to destroy them if they did not come in under his plan. I am referring to the organizations that the farmers had already created.

Now, in order to further this plan, he gave these people to understand that he had been the organizer of the California Fruit Growers' Exchange, the California Walnut Growers' Association, of the Sun Maid Raisin Association, of the Peach and Fig Growers' Association, all of the State of California, and all of which, proceeding upon plans quite different from Mr. Sapiro's, had been able to gather for the fruit growers some substantial benefits. And that wherever Mr. Sapiro went he allowed the impression to go out that he was the master mind of that business, of these associations; but that, as a matter of fact, they had been organized by other men and on other plans. That he went everywhere talking about what *we* have done in California, 'what good results *we* have had in California,' and advised people to follow his lead to the same glorious result as he painted it, and we will show you that he painted it very thick.

We will show you that the plaintiff entered upon a general scheme of publicity; that he got himself written up in the newspapers; that he arranged to be invited to make speeches at various places; and that after a time he had succeeded in impressing the people through these and other means with the fact that he was a wonderful man for the farmers, and sometimes then he began to be invited without solicitation on his part.

We will show you that he went up and down this United States of America from the Pacific to the Atlantic Coast, across the Canadian line into Canada, and clear from that northern point down through the Southern States, making the representations in regard to its plan and his purposes to which I shall call your attention in a few minutes.

WE WILL show you that the scope of his scheme was almost unlimited; that he proposed to advocate the organization and control of every staple farm product, wheat, corn, rye, barley, potatoes, tobacco, cotton, and dairy products; that he had, or at least there was printed in the papers, his picture over the title of 'The Wheat King,' although he had never raised a bushel of wheat in his life.

We will show you that he was put forward as the friend of the farmer, and now I want to challenge your attention, ladies and gentlemen, to this, in substantially all of his discourses, and I think we will show he made many hundreds of them, and in articles which he inspired, he specifically represented that he was not working for money; that his sole interest was the welfare of the American farmer. He stated in express terms that his heart bled for the farmer, and that he had no sordid influences, his heart was not stained with cupidity.

I will show you as a sample of these speeches, repeated in substance and effect throughout the United States, that on April 14, 1920, he journeyed from his western home down into Alabama. And let me say to you now by way of introduction to this article, that we will show that a very large percentage of the tobacco growers of these Southern States are poor tenant farmers, and that what he was saying to them, not only at Montgomery, Alabama, but at other places, and in Kentucky and Tennessee, was said to people to whom the prophecy he made would naturally be alluring.

Senator Reed here began a recitation of Mr. Sapiro's activities in respect to the formation of numerous coöperative associations, as the defense expects to show, covering tobacco and cotton growers of the South, wheat growers, and other farm producers throughout the country. He referred frequently to speeches made by Mr. Sapiro in urging the formation of coöperative associations.

RELATIVE to the formation of the Burley Tobacco Association in Kentucky, he said:

SENATOR REED: Now, the evidence will show you, and I am coming more directly to the Burley Tobacco warehouse deal which I have referred to before, and now I want to give it more in detail. During the war tobacco had commanded a very high price, and the profits to warehouse men were correspondingly large, and, therefore, warehouses had been built far in excess of the needs of the community. That when the slump occurred after the war, tobacco slumped and the commissions or profits of the warehouse men who were handling the tobacco correspondingly diminished.

The warehouse men in this district began to lose money rapidly. They were in debt. Many of them were approaching bankruptcy. That they had had numerous meetings to devise ways and means out of their dilemma. That a committee composed very largely of these warehouse men, along with Mr. Bingham, went to New York to interview Mr. Baruch, and I am now repeating a little of what I just said to you, and I put it in here so that I may speak in sequence. It was through Baruch they were put in touch with Sapiro. When Sapiro came to Louisville it was the committee of these warehouse men, not the growers but the warehouse men, whom we will show were on the verge of bankruptcy, that met Mr. Sapiro, and it was to them he outlined a plan. He proposed to these warehouse men that they would help him go out and organize the farmers into these organizations. They would get the farmers to sign these contracts which bound the farmers to deliver their crops of tobacco. That upon the tobacco thus delivered they could borrow money, and that they would then take the money borrowed upon the farmers' tobacco and buy these warehouses from these gentlemen.

Now, we will show you that this was the plan laid before the men who had the warehouses to sell, and who were very anxious to get the money.

I will show you that he proceeded to carry out that promise and agreement with them. That at the first meeting of the or-organizers, Mr. Sapiro appeared with the minutes of the meeting already written before the meeting was ever held, and in those minutes prepared by him before a meeting was ever held—I mean before the organization had been completed—he re

cited that in purchasing the warehouse properties, the director of warehouses is specifically instructed by the board of directors to deal liberally with the owners of such properties and to err, if at all, on the side of generosity to such warehouse men, having in mind not to waste or spend the farmer too loosely.

We will show that Mr. Sapiro wrote that in the minutes himself as the instruction to the man who was to be charged with buying these warehouses.

Now, after having laid this plan out to these warehousemen by which they were to unload their properties on the association at these liberal prices, he proceeded to put it to a vote whether they would accept the proposition, and we will show you they unanimously accepted.

Now, we will show you that at about this time, indeed at this time, trouble arose with this scheme in this wise: there had been for many years what was known as the American Farm Bureau Federation. That was not a Sapiro organization. It was a federation of state farm bureaus and it was composed entirely of farmers.

We will show you that they did not have warehousemen and bankers in it, and that it was somewhat extensively organized over the United States.

NOW, we will show you that at this time a man named Gustafson—I do not know whether I pronounce that exactly right, 'G-u-s-t-a-f-s-o-n'—was in charge of the marketing department of the American Farm Bureau Federation. That the Kentucky Farm Bureau was composed entirely of farmers and it had requested the American Farm Bureau Federation to send its marketing director to Kentucky to advise with them relative to the formation of a coöperative marketing association for tobacco in their district, and Gustafson came in response to that request. He appeared in Kentucky before the Kentucky Farm Bureau and outlined his plan, and he was about to put it on its feet. That plan, we will show, if carried out, would have resulted in farm organizations then existing in Kentucky affiliating with this really true, sure-enough, if I may use a colloquial term, farmers' organization.

Now, we will show that this proposition of Mr. Gustafson, and the meeting that he had, became known and that Sapiro then had his confederates call a hasty meeting on the very night Gustafson appeared before the Farm Bureau and that working late into the night they prepared a list of names for a pre-organization committee and published that list in the morning edition of Bingham's paper, known as the Louisville *Courier-Journal*.

We will show you that the purpose of this hastily called meeting was to block the movement of Gustafson or organize the real Tobacco Growers' of Kentucky under the leadership of the Kentucky Farm Bureau, into a coöperative marketing association, and that the purpose of Mr. Sapiro and his associates was to head off or anticipate that movement and occupy the field ahead of it.

Now, we will show you that on this pre-organization committee, largely selected, if not entirely selected, by Mr. Sapiro, and by his associate, Mr. Bingham, there was Mr. Bingham, himself, one James C. Stone, one Ralph M. Barker, one John T. Collins, and one Edward Simms, three out of five of this pre-organization committee, which was to be organized for farmers' benefit, were warehousemen who had warehouse properties which were later turned over to the association at exorbitant prices.

We will show you that Stone unloaded his warehouse, which was worth not more than $125,000 for $250,000. That Barker unloaded two warehouses worth approximately $70,000 for $150,000. That Collins sold a warehouse at an exorbitant price, the exact figures I cannot give you at this moment, but it will appear in evidence.

Now, Simms had no warehouse to sell, and we will show you that shortly thereafter he became dissatisfied with this scheme and he withdrew.

Now, before the Burley Association was actually incorporated, Collins died and the active work of the promotion of the association was left to Bingham and Stone and Barker, and that they controlled all of the activities of the association and that Mr. Sapiro sat in with these three men, and that this nucleus of four men prepared the slate of all of the officers and the executive committee of the Burley Association when it was formed; they outlined the plan. Sapiro himself prepared the articles of association, the pre-organization papers, and the by-laws of this association, and it was in these papers that I have told you that the stipulation was written that they must be liberal in the prices they paid for warehouses and err, if at all, on the side of the warehousemen.

Now, we will show you that within a few days after the actual incorporation of the Burley Association, the association through this same Ralph N. Barker, a warehouse man, and who had been made general director of warehouses for the association, purchased 119 warehouses in the Burley district, at a price of $2,000,000 in excess of their market value.

Now, Sapiro, we will show you, drew a resolution, proposed it at the incorporating meeting of the Burley Association, vesting the complete control of that association in an executive committee of five men, and that four of the five men appointed to act on that executive committee for the first year were warehousemen who had sold their warehouses to the association at these exorbitant prices.

In addition to this we will show you that Sapiro, Barker, Bingham and Stone selected the officers of the association for the first year, and they included Stone, as president, he being the man, as we will show, who had sold a $125,000 plant or warehouse for $250,000. He was selected as president at a salary of $22,000 a year.

John W. Kehoe, a vice-president, was also a warehouseman who had sold a $50,000 warehouse for $146,000. Bush W. Allin was made the second vice-president, and Allin had sold a warehouse at Harrodsburg, Kentucky, for easily its value.

Now, we will show you that that is the same Bush W. Allin who within four weeks after the incorporation, organized a re-drying company which he practically owned, and that the total price he paid for the re-drying plant was $15,000, that is, he agreed to pay that, and he paid $4,000 in cash, and was to pay the other $12,000 in equal annual installments of $4,000. That through his associates, Mr. Barker, another one of these warehousemen who was on this board, this man Allin, who was a director and an officer, made a contract with the association for drying association tobacco, and at such an exorbitant price that in nineteen months' time they made a profit of 250 per cent upon their investment.

WE WILL show you that prior to the incorporation of the Burley Association, Bingham, Barker, Stone and Sapiro had agreed that Barker should be made the director of warehouses with full power to purchase all of the warehouses in the Burley district, and he was to receive a salary of $18,000 a year, and, in addition his association, when formed, was to contract with him to furnish him all of the association tobacco that a certain re-dryer in which he was financially interested, located at Carrolton, could handle. We will show they were making contracts on behalf of the association themselves.

We will show you that during the first year the association paid Barker his salary of $18,000 a year to serve it, and in addition paid his re-drying company more than $87,000 for re-drying association tobacco on a contract that he let to his own concern.

We will show you that in the second year the association paid him for re-drying $51,000. We will show you that because of his inside situation and control, his plant got nearly if not quite one-sixth of all the first year's crop that the association handled and his little plant we will show you is located in a small town, and there is no railroad except a narrow-gauge stub line.

Now, we will show you that although it had been represented to and was believed by the farmers that the directors were to be elected by the growers in the different districts mapped out by Sapiro, that matters were so managed by Sapiro and his confederates that fourteen of the twenty-two directors were former warehousemen.

I expect to show that from first to last this organization was under the influence of Mr. Sapiro. That immediately after the scheme of organization had been on foot, these directors, at the instance of Mr. Sapiro, voted him a fee of $36,000 for his work in merely organizing, and a further fee of $12,500 for organizing these subsidiary companies that I have told you of to acquire warehouses.

IT WILL appear from the evidence that Sapiro's chief instruments and associates, Bingham and Barker, wanted to pay Sapiro $100,000, but that they learned there would be opposition at the meeting which was to be held of the directors who were not in the combination or ring, and so finally before the meeting was held they got together and agreed on $36,000, and they were able to put that over at the meeting.

MR. GALLAGHER: If the Court please, I desire to move to strike out the statement that they were able to put that over at the meeting, as argumentative and not a proper statement of facts.

THE COURT: The form of the statement is argumentative.

SENATOR REED: Well, it was passed at the meeting, and through the efforts of these gentlemen, these gentlemen at the meeting supported the proposition and it was passed. I will state it that way.

* * *

We will show you that repeatedly, as Sapiro went over the country addressing meetings of farmers and planters, he stated to the farmers whom he was trying to get into his association, in substance and effect, that he was not organizing these associations for fees. I have already told you that. I repeat, he said it repeatedly, that he was engaged in it from a humanitarian standpoint, that he did not care for fees, that he would accept any sum paid him, any sum the farmers wanted to pay, or the boards of directors might fix, that his heart bled for the farmers, and similar statements.

Now, we will show you in connection with that some facts relating to the Idaho Potato Growers' Exchange. That before taking employment, or was employed, he wrote to the organization manager a letter from which I just quote one or two lines.

> 'You may fix my fees at whatever sum you and your directors think reasonable and I will gladly accept the same. I and my office never quarrel with coöperative associations about fees.'

We will show you that the work done there was very small, that he demanded, however, a fee of $2,500. That this work was not done by Sapiro alone, but by a young man in his office. That the directors

the exchange regarded the charge as orbitant. Finally, they offered to pay $250 as a compromise. Sapiro refused to accept it.

Now, at this time the Exchange was selling its potatoes through this Weyl & Zuckerman at San Francisco. Weyl & Zuckerman had a lot of money of the Exchange in its hands. And, we will show you that when Sapiro got into this controversy, instead of going where the Idaho Exchange was, and bringing a suit there, he did not go there, but that he assigned his claim for fees against this Idaho Potato Growers' Association to his own partner in San Francisco, and that this partner, or one of his partners, who was at that time attorney for Weyl & Zuckerman, as well as attorney for the Exchange—and they sued out an attachment or garnishment in San Francisco, where they planted this suit, against Weyl & Zuckerman. That they tied up the moneys of the Exchange in San Francisco. That they thus compelled the company, if it litigated at all, to go from its home, the distance to San Francisco, to there litigate the case. And, I believe the evidence will show that in order to escape all the expense they would have, the association paid the bill, and we will show you similar acts.

OTHER coöperative organizations formed under the Sapiro Plan which came in for discussion by Senator Reed in his statement included the California Tomato Growers' Association, the Vegetable Growers of California, the California Prune & Apricot Growers Association, Incorporated, the Idaho Potato Growers Exchange, the Colorado Potato Growers' Exchange, the Dark Tobacco Coöperative Association, the Virginia & Carolina Peanut Association, and the Northwest Wheat Growers Association.

Relative to federating the wheat organizations into a national exchange, the statement of Senator Reed was as follows:

SENATOR REED: Now, we will show you that it was the plan of Sapiro to organize wheat associations in all the wheat-growing states of the Union, and, as I have already told you, I believe, to federate them into a national exchange and then organize the wheat growers—

MR. GALLAGHER: If the Court please, this is all repetition of this morning's statement.

SENATOR REED: It is not.

MR. GALLAGHER: Argentina and Australia and Canada and this country, this morning.

SENATOR REED: Well, it takes a moment—

MR. GALLAGHER: I do not care how long it takes. I object to the practice. It is wrong. It is not the time that I am concerned with, but it is the practice I am concerned with.

THE COURT: The statement just recited to was repetition.

SENATOR REED: I was going to add to that I had said that I had said to them that I was going to organize wheat growers of Australia, Argentina—

MR. GALLAGHER: If your Honor please, we have ruled upon that. It is in direct violation of your ruling.

SENATOR REED: Let me finish my sentence, please, sir. That in addition to the countries I have named, Russia. Now, that is the statement.

Now, I am calling your attention to one other matter which I am only going to touch on very very briefly.

That there was held in Chicago a meeting at which Sapiro, Bingham, Eugene Meyer, Frank O. Lowden, Walter Peteet, Carl Williams and Sam Guard appear.

They had a secret meeting in Chicago, about October 9, 1923. Certain of the employes of the American Farm Bureau Federation were invited to this meeting, but none of the officers.

We will show you that the purpose of the meeting was to consummate the plans of Mr. Sapiro in the formation of the coöperative wheat associations in all the wheat states of the country, and then the federation of these associations into a national exchange, and then an international exchange.

This, however, was not the program of the American Farm Bureau Federation. Later these plans became public, and the American Farm Bureau Federation refused to join in them.

* * *

SENATOR REED: Now we will show that it was arranged at Chicago for a meeting to be held in Denver, Colorado on October 30, 1923, and that Meyer traveled, Eugene Meyer traveled from Chicago to Minnesota, North Dakota, Montana, Washington, and then back to Denver, endorsing the scheme. That he was in North Dakota addressing a gathering of wheat growers, and in that he declared that he endorsed the Sapiro plan, and he told the wheat growers if they would organize in a coöperative association on the Sapiro plan he could make a very favorable report with reference to financing.

We will show you that Bernard Baruch loaned this committee, these people who had gotten together, or advanced them $5,000. Julius Rosenwald, another man who was named, loaned them $15,000. Mr. Bingham loaned them $20,000. I think Mr. Sapiro himself put in $5,000. And that all of these sums were to be used by this committee in furtherance of the plan and scheme I have been outlining. And we find afterwards that Mr. Sapiro, and Eugene Meyer, and others of these gentlemen did attend this Denver conference.

Now that is a mere hint to enable you to appreciate the evidence as it comes in. There is a story in connection with the Kansas wheat growers and the organizations affected there, but I am not going to take your time to detail it. There are many others of these associations.

As the evidence comes in you will learn that more than forty of these associations failed, or substantially failed.

These are just a few of the high points of the evidence that I have given, and when this evidence is in we will have shown that these failures of these associations and we will have shown that with the exception of a very few they have been unsuccessful, and that the members have received less money for their products than was paid to outsiders on the open market.

THAT thousands of farmers have suffered terrible losses in Sapiro's organization, that these losses run to millions and millions of dollars. That all of Sapiro's claims that these associations could control prices turned out to be false, to be failures, and that the whole plan and scheme of his organization was unsound and in many respects unworkable.

And that Mr. Sapiro's representations with reference to these organizations were false, and that Mr. Sapiro in almost if not all cases got himself employed by promising and agreeing that he would accept whatever fees these farmers' associations saw fit to fix, and that almost without exception he collected exorbitant fees.

That he had in his mind a dream of fees, through the organization of all of the farmers of the United States, and through becoming attorney for such organizations, and that these fees, if his dream or expectation had been realized, would have amounted to a million dollars.

* * *

We will show to you that Sapiro actually collected from these organizations, which he promised he would work for at such price as they fixed, fees amounting to hundreds of thousands of dollars.

* * *

I believe the evidence will show, and we expect to show, that these fees ran to approximately a million dollars.

We will show that in the articles printed for which they are suing that we have not used the word 'conspiracy.' We have charged the existence of specific facts, and those facts as far as they are issuable here we propose to prove.

* * *

And that if these facts can be properly characterized by the plaintiff as a charge of conspiracy, then we will have proven that charge.

We will prove that Sapiro was directly or indirectly responsible for the failures and losses to which I have referred. We will show you numerous acts entirely unprofessional.

That for a lawyer to go out and promote his own business is unprofessional. That to solicit, directly or indirectly, business is for a lawyer unprofessional. That to obtain legal employment by indirection is unprofessional.

THAT to hold out false promises to clients is unprofessional. That to agree to allow the clients to fix fees, and then to breach that agreement is unprofessional.

That to work for two or more clients having opposing interests at the same time is unprofessional.

That to connive with a lawyer to get business partly in his name and partly in the name of another lawyer, and then to split the fees by previous agreement is unprofessional.

That to induce the organizers of an association without authority to secretly pay a large fee is unprofessional.

That in order to gain control of associations for plaintiff to have confederated himself with interests opposed to the association and to cause them to be paid hundreds of thousands of dollars more than the property is worth is unprofessional.

That to confederate with speculating agencies while at the same time claiming and pretending to be the enemy of speculators, and to be engaged in protecting the farmer clients from speculators—

* * *

Finally we will show you that these articles were printed in good faith for the purpose of protecting the farmers and growers of the United States against these schemes of the plaintiff, Sapiro.

And having shown all of this, we will ask you to find that Aaron Sapiro was an exploiter of the American farmer. I thank you.

Taking of testimony started immediately upon the close of Senator Reed's speech.

W. J. Cameron, editor of THE DEARBORN INDEPENDENT, was the first witness called by the plaintiff. Examination of Mr. Cameron had proceeded but a short time, when Judge Raymond adjourned court over the week-end until Monday morning, March 21.

(A concise report of the proceedings in this case giving the testimony of the witnesses will appear in our next issue and will be continued week by week until the termination of the trial.)

NOTES · COMMENTS · CRITICISM

MR. FORD'S Page this week discusses stagnation in the midst of prosperity.

Commander Richard E. Byrd, like Alexander, is looking around for fresh worlds to conquer. 'Where shall I go next?' is the question he asks himself. The average man would answer, 'There is nowhere to go, nothing left to explore'; but Commander Byrd knows differently. He is already planning new enterprises. (p. 1)

Newspapermen and novelists are usually seen (and heard) at their best in a postprandial symposium. Two interesting personalities are shown in this light by William L. Stidger. They are William Allen White and Sinclair Lewis. Reversing the textbook definition of perspective, it may be said that here we have these men not as they appear to the eye but as they really are. (p. 3)

Charles D. Cameron treats an old theme in a new way. He takes a stab at that increasingly banal banality: 'Is Easter Christian or Pagan?' and lets some daylight into it. (p. 5)

Trial of the libel suit for $1,000,000 damages brought by Aaron Sapiro, Chicago attorney, against THE DEARBORN INDEPENDENT, has begun before a jury of six men and six women in the U. S. District Court in Detroit. The suit is based on a series of articles published in THE DEARBORN INDEPENDENT criticizing the Sapiro Plan for the coöperative marketing of farm products. (p. 6)

Biographies have become the vogue. Great men, and men who are not so great, are having all kinds of things dug up about them. Sometimes the digging is good and sometimes it isn't, for it does not always prove that the evil men do lives after them and that the good is oft interred with their bones. (p. 8)

Windmills, canals, dykes, Paul Potter pastures, and spotted cows. These are the ingredients of which we are accustomed to think Holland is made. Hilaire Belloc sees other pictures, however, and accomplishes with his pen what Paul Potter never attempted to do with his brush. (p. 12)

When a man speaks of firing the cook it is generally found on investigation that the cook has fired herself. This is partly true of politicians who think that they are statesmen. Harry Pence shows in what way. (p. 14)

Hugh Walpole comes along with the concluding and most entertaining installment of 'The Happy Optimist.' (p. 16)

The biographical sketches of Elbert Hubbard as a fleeting personality with a lasting influence are continued by James W. Beckman. (p. 24)

Here are some more things recently said by our readers:

Pasadena, California.

You are to be congratulated on the manner in which you present to your readers the many interesting articles about which we are concerned. It is indeed a great pleasure to read facts, and if we were able to get more accurate information, such as is published in your magazine, it would be of material benefit to all of us.

ROY C. WAGES.

Lennox, Inglewood, California.

I have been a subscriber and critical reader for the last three years and always find some new and interesting information for the general public that other publications do not bring to the notice of its readers.

I trust the time will soon come when THE DEARBORN INDEPENDENT will have the largest circulation of any paper or magazine published in this country.

Keep up the policy of printing the truth without fear or favor.

JOHN H. BATZLE.

Indianapolis, Indiana.

You are to be complimented on your article in a recent number of THE DEARBORN INDEPENDENT on 'Man's Own Flat Wheels.'

I have served with the U. S. Army, in Cuba, Philippines, China, and in France; this aside from my practice in civil life. I want to say to you that your article is surely educational. It would be a wonderful thing if more periodicals would publish articles similar to this one. The public must be educated to think of their feet, just as they have been taught to think of their teeth, eyes, stomach, and so on.

Is there a relationship between your health and your job? Absolutely yes. Everyone realizes that there is a vital link between health and work. If a person is ill, naturally work is out of the question, but when a person merely feels run down he may attempt to stick to the job. At this point a man becomes a cheater, first of himself and secondly of his employer. In the construction of a building, the setting of modern machinery, or what not, the first consideration is the foundation. The same thing is true of the human structure, the feet. The feet are the foundation upon which the human structure is built. Each foot contains twenty-six small bones and twenty muscles which bind the frame together. Undue strain will weaken these muscles and cause them improperly to function, hence releasing the bony structure which results in a painful condition; when this stage is reached and a man attempts to stick to the job he becomes a cheater.

My contentions are that no man or woman can be efficient whose foundation is weakened. Painful feet can be avoided. Feet deserve as much care as any other part of the body, and should have it.

Improperly fitted shoes make more cripples than any other one thing. Shoes should be fitted just as accurately as false teeth or glasses. Remember it is not the amount that one pays for shoes, but the fitting that counts. Occasionally one will find a shoe salesman who does not know how to fit shoes. This is not general, however; most shoe clerks are efficient, and will do their work well if permitted to do so. You will find that most of the misfit shoes are due to the purchaser who will insist upon fitting himself. Let the shoe salesman alone, have confidence in his ability; let him do the job for which he receives a salary, the job he knows how to do, and the results will be very gratifying.

A cheerful mind is said to be a great aid in avoiding disease, but of course the good cheer is apt to be difficult unless there is sound health. A wise man or woman will seek to establish the relationship between health and the job.

Were it possible for you to see just what I see, I am sure you would say that we are becoming a nation of cripples.

DR. ROLLIE R. COOK.

Chaplain-in-Ordinary *to a* FILM

Clergyman Consultant *of* De Mille *Tells What He Saw at* Hollywood

By REVEREND WILLIAM E. BARTON, D. D.

I DID not see it all. Many people returning rom Hollywood have seen, r profess to aveseen, much hat I did not iscover. The ame is true of isits I have nade to Paris nd Shanghai. t is true also of ny own city. I o not go far ut of my way n other cities o see things hat I have rea- on to believe xist in my own ity and which o not interest ne there. But till I do not go round with my yes shut, and I see things that re interesting to me and which hen I relate them appear to nterest my friends.

This is an age in which every nan is meddling with the busi- ess of other men. The success- ul banker is trying to play the ass drum; the successful tockbroker is trying to write oetry; the successful dealer in oots and shoes is trying to be a reacher; and the preacher too ften neglects his main job trying o do something other than to reach. My son Bruce Barton is oth a business man and a literary nan, and he writes religious books hich sell as the books of preachers ever sell when they write on religion. am a preacher, and I write about braham Lincoln. My books on incoln sell better than any that I rite on theology. But Bruce and I ivide the book-buying public between us and catch them coming or going. That is where this story starts.

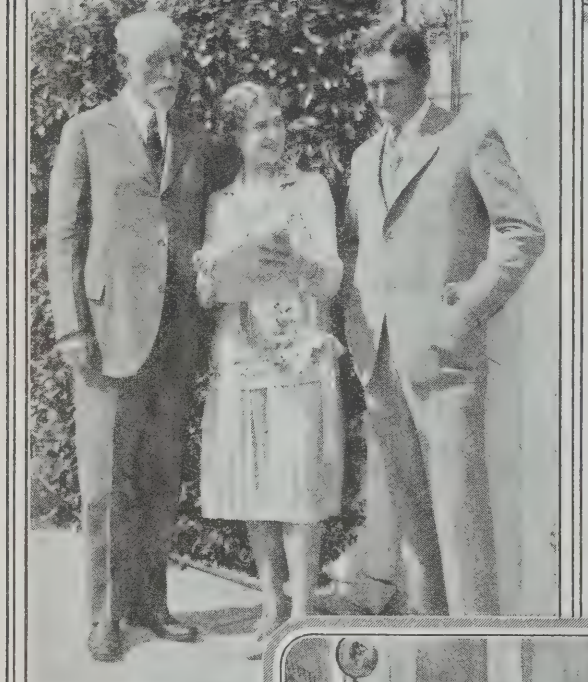
—*William E. Thomas Photos.*

Oval—*The repentant Mary Magdalene, bearing ointment to anoint Jesus. Upper—The Saviour bound in the House of Caiaphas, before the High Priest and Simeon the Pharisee.*

Last summer, Bruce and his wife and family, and his brothers and sister with their families, and I as patriarch of the tribe, were at Foxboro, Massachusetts, where the Bartons have had a summer abode for thirty years. That also is a story, for I do not know of any other family whose situation in this regard is equal to our own. One day Bruce had a telegram of some three hundred words from Cecil B. De Mille, telling him that the De Mille concern was about to begin filming the most notable religious picture ever produced, and that they needed his help in the preliminary work. The telegram read like an invitation to conduct a series of revival meetings—except that it was accompanied by an offer to pay his expenses and those of his wife Esther and to pay him a very liberal sum besides for a month's visit, which meant three weeks in Hollywood.

Bruce wired back expressing his interest, and adding that while he could furnish a certain kind of assistance, if the producers wanted exact Biblical scholarship they should invite me to come also. He got another telegram, this time perhaps of four hundred words, and I got one somewhat shorter

but to the point. The financial arrangement was satisfactory. I had to cancel several summer engagements but I did not lose any money by doing so. In due time we three found ourselves installed in the Hollywood Hotel, with a liberal expense account, and with no need to set our foot on the soil of California as long as the gasoline lasted, and it lasted as long as we needed. Whatever the sins of the producers of motion pictures, they are not niggardly in the amount of money they allow for work like this.



Jeanie Macpherson, with Dr. W. E. Barton, on her right, and Bruce Barton.

The Hollywood people I saw seemed to be composed of those who do not have a job and are working hard for one, and those who do have a job and must work hard to hold it down. Hollywood is about the last place I should advise a friend to go for employment.

Cecil B. De Mille.

I had never met Mr. De Mille, the producer whose invitation we had accepted. I learned from him that he was the son of a professor of literature in Columbia, who had two side lines of activity. He was a student of dramatics, and had much to do with the evolution of a distinctive type of American drama; and he was a lay-reader in the Episcopal church, usually serving some little church in the vicinity of New York City. If the church had a small rectory in which his family could live, and he got the rent free, and not much more, for his service, the growing De Mille family felt prosperous. And when he began to get a little money for dramatic criticism and the writing of plays, 'then,' said Cecil De Mille, 'we had shoes and everything.' Professor De Mille died, and his widow established a dramatic agency, and the children continued to have shoes.

The writer of the scenario, *The King of Kings*, is Jeanie Macpherson, a competent and attractive young woman whom I greatly admired. She gave me her photograph inscribed, 'To my dear Dr. Barton, with whom I have fallen in love.' I showed this to my daughter when I returned home, and said, 'In Hollywood, this simply means, "Whom I esteem a dear friend." But she said, "Oh no, father; in Hollywood, that means, 'Whom I have met.'" '

However, I think Jeanie really liked me, and I liked her. She is American but proud of her Scotch descent. She wants to go to Scotland where she has never been, and to gather material about Rob Roy and the Red Macphersons. I promised her that if I should happen to be in Scotland at the time I would show her where her ancestors were hanged for cattle-stealing. It was a Macpherson of whom Burns wrote:

Sae rantingly, sae wantonly
Sae daungtingly gaed he;
He played a spring and danced it round
Beneath the gallows tree.

Every day we four persons and one other lunched together, and pulled the scenario apart and stuck it together again. There were just the five of us at these daily conferences, and I was able to get an idea how a scenario is built up, and why producers are not willing that authors should sit in and make the scenarios of their own stories. The rest of the time Mr. De Mille worked in his

'And the chief priests accused Him.' Jesus before Pontius Pilate, accused by Caiaphas, the High Priest of the Temple.

Ellen Glasgow *and* 'Barren Ground'

By MAY B. WHITING

Home of Ellen Glasgow.

VIRGINIA has always been to me a land of handsome colonels, of dainty ladies in ruffles, of jasmine and magnolia blooms. I had no special desire to know it better, for I felt that I should never understand its shadowy romance. Then I read *Barren Ground* by Ellen Glasgow and realized that Virginia is a place of labor and conquest, its people toilers, still struggling with the old problem of how to get a living from the soil. The haunting sincerity of the book revealed the state entirely different from my fancy, and I felt that I must see and learn more about it for myself.

On the way down in the train I kept recalling the scenes of the story. Here was the 'featureless landscape' picked by the tenant farmers as 'clean as a skeleton.' On every red-clay road that stretched over the low hills I looked for a girl in an orange-colored shawl 'running toward life.' At the little towns I expected to see Nathan Pedlar loping to the station with the mail, or the village dressmaker waiting to take the train to Richmond for the day. Broomsedge I did see, a-plenty, its tall plume gracefully waving, beautiful, but ensnaring to the feet of progress. 'Broomsedge ain't jest wild stuff,' said old Matthew. 'It's a kind of fate.'

ALMOST any of the farms might have been 'Old Farm' with the hound Rambler and the cat Flossie on the steps and a scuppernong grapevine over the porch. There were plenty of figures bending over their toil which might have been Joshua Oakley, pursued by the 'destiny which dogs the footsteps of ineffectual spirits.' I wondered if within the house the wife was cooking without milk or butter because there was no cow, or if the daughter had spent her savings on a dress the color of her eyes because her lover had admired them.

In Richmond almost the first point of interest I looked up was Ellen Glasgow's house. It is a handsome Georgian mansion, one of the few remaining in the city, with four great chimneys and magnolia and holly trees overshadowing the porch. Everywhere Miss Glasgow is spoken of with pride and affection, and I resolved to call on her as one from the North who desires to know the South better.

The interior of the house is even more charming than the outside, with its wide hall and circular staircase and hand-carved paneling in all the rooms. In the reception parlor a fire of West Virginia coal glowed in the fireplace, above which hung a steel engraving of 'The Burial of Latane,' a well-known Confederate subject. The furnishings were of Colonial design and a bowl of mistletoe adorned the table. Here was the aristocracy and elegance of the South while my mind was filled with its poverty and its struggles. While I was trying to fit together these contradictory ideas my hostess entered.

Miss Glasgow is a radiant, vivid personality, with a golden gleam in the softly waving brown hair, and tawny lights in the sparkling brown eyes. At first meeting she seems one who would write entertainingly of the lighter side of life, its foibles and its ornaments, rather than of its problems. I explained that I had been deeply impressed by *Barren Ground* and that it had given me a desire to know more about Virginia and its people. *(Continued on page 19)*

A Plea *for* Scientific Taxation

By CHARLES JOHNSON POST

IN THE rural court the justice looked down on the culprit.

'Fifteen dollars' fine for having a dog without a license,' he said. 'Might be a sheep-killer,' he added.

In a court in a big city in the same state a police officer stated the charge. The court nodded.

'Drunk and disorderly and fighting in the car?' he asked. 'Fifteen dollars' fine—maybe you'll learn not to be a nuisance next time.'

The line of prisoners moved up. A shabby owner of a tenement house looked up at the judge.

'Violation of the building code—fire escapes unrepaired endangering life of tenants; plumbing a menace to health. Fifteen dollars' fine.'

In that same up-state county the board of tax assessors was in meeting to hear protests and valuations.

'Now, Jim,' said the chairman kindly, 'you know that new cow barn of yours, paint and all, didn't cost you a cent under $1,500. We've only raised your assessment $750 and that only puts on $15 to your tax. You've got no kick coming; that's fair enough. Fifteen dollars—why you ought to be paying $15 more than that, by right.'

In that same big city the committee on protests of the board of taxes and assessments was in session.

The chairman looked at the list of names before him.

'Well, Mr. Jones,' he said firmly, 'you admit that you've put in new plumbing throughout your house—a fine job, too, and you say it needed it. You've painted it and put lanterns in the front door and our assessor says it's the best-looking house now in the block. It cost you anyway $3,000 and all we're doing is raising your assessment so your tax is $15 more. That $15 tax extra will have to stand. Next!'

A YOUNG man stepped forward.

'Your Honor,' he said with embarrassment, 'I bought a lot when I got engaged; it wasn't anything but weeds and tin cans. Then I got married and we built a house on it. It cost $7,500. I am paying interest on the mortgage and paying off the principal. It's not easy sledding. My tax bill of $187.50 is pretty stiff. Most people think it looks better than it did with the tin cans and weeds there.'

'Sorry,' said the chairman, 'but that's the law. Next.'

The self-possessed, clean-cut business man stepped up before the chairman.

'I have just added a new wing to my factory,' he said. 'I have hired one hundred more skilled workmen and am paying them good wages. They spend those wages in this community, and have added that much more to the purchasing power of this city. I have put in $50,000 in new machinery—this means that in some other town in the nation hundreds of men were paid wages to make that machinery. I am shipping ten additional carloads each week from that new wing—and that means more business for the truckmen here and for the railroads that haul it. In other words, I have invested over $80,000, about $250,000 more each year in wages, in this community. And you have raised my tax assessment so that I must pay $2,000 more taxes on that account! Is that common sense?'

'Sorry,' said the chairman. 'Next!'

WELL,' retorted the manufacturer, who knew about dogs and drunks and disorderlies, 'I could keep 133 sheep-killing dogs for that money or pay the fines of 133 drunks and disorderlies! I'd like to shake the hand of the man who said the law is an ass!'

And there you have the tax laws of every state in the United States in a nutshell. Unscientific! That is too mild a word for a jumble of tax laws that actually are repressive and destructive of the very business life of our nation.

Just think it over for a minute. What makes a people prosperous? It is their ability to produce merchandise in all forms and exchange the same. With this production of merchandise invention is stimulated, merchandise is produced more easily and more people enjoy it; new desires create new jobs and more prosperity. The encouragement of the production of merchandise in all its forms is the basis of a nation's prosperity and progress. It is its life.

So that one would think, naturally, that a wise nation and an intelligent people would demand that every encouragement be given to the production of merchandise. And yet we put the penalty of higher taxes on the very enterprises that make more jobs, employ more men, and increase the purchasing power of the country. We fine the owner of sheep-killing dogs; we fine the man who is a public nuisance; we fine the man who allows his tenement to be a menace to health and life; and we do all this, properly enough, in order to keep down the number of these nuisances.

And we fine the man who builds better and safer houses! And we fine the man who increases the manufacturing business of the nation, and increases the amount of wages that he pays, and who adds to the wealth and purchasing power of the country! We fine them by higher taxes. Are these men nuisances, too? If not, why should they be treated as such?

It is time to stop and think—that is, if we want our prosperity to continue—and do some scientific thinking on tax matters and the actual destructiveness of our tax laws.

OUR tax laws are nothing but an evolution of the ignorance of the historic past. They are not based upon scientific principles. Originally taxes were nothing but tribute, or plunder, exacted from a conquered people; and their collection was farmed out to tax-gatherers who extorted as they chose so long as they turned in to the central government a fair share of the plunder.

Then, in feudal times, the king received tribute, or taxes, from the feudal barons who, in turn, exacted tribute from the people directly under them. But here was really a much higher plane, for the king gave a service in return—the service of a common protection to his barons. The barons, in their turn, gave the service of protection and security to those directly under them. This was not so bad, in principle, for it had in it the sound principle of taxes to the government in return from definite service rendered.

But then came the muddled thinking. Just because these taxes were collected from the rich—barons or merchants or farmers—so the idea developed that taxes should be col-

ected from those who made wealth, hat it was just tribute and should be ollected like tribute. As governments xpanded and progressed the idea be- ame crystallized that taxes should e paid out of merchandise and goods! nd the sound principle that taxes are nerely a payment from individuals to he government in return for services endered by the government to the eople dropped out of sight.

Thus we evolved into our present ondition where we apply the same rinciple of penalty taxation to the uisance that we do to the things that enefit the nation and are its source of rosperity.

As one studies the development of overnment since the Middle Ages, ne sound underlying principle is oted—and it has been forgotten or nowed under. It is the principle that axation rests on *services* rendered by he central government in whom the axing power properly resides.

These governmental services—se- urity, good roads, schools, police, fire rotection, courts of justice and the hole mechanism by which a com- unity is administered—are the serv- es which the people must support nd pay for in the form of taxes.

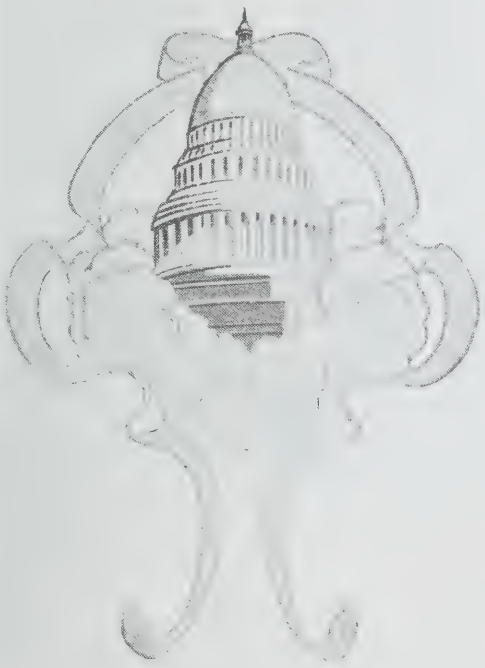
All of these services performed by he government create values. These alues, and the opportunities that lie n them, help to create wealth. So it proper that taxation should be vied against the values that govern- ent creates; it is proper, again, that axation should be collected from this overnment-created wealth. And, since ese values are created by the govern- ent as a whole, they properly *belong* o the government, and *not* to any rivate individual. This is reasonable nd scientific in principle. Any other ne of thought brings us back to taxa- on as a mere form of extortion or ibute. If this is too abstract let us ake the young man who built himself house and home on the weedy, tin- an vacant lot.

WHEN that young man bought the t, the man who sold it to him said: Now, when you buy this lot you have ater piped in this street; the street is aved; there is a splendid school stem here just a few blocks away; e have the finest fire department; in ct, while this lot may cost a little ore than elsewhere, yet you get etter service with it.' Fine.

So he bought lumber for his house— usiness was that much better in mber, plumbing supplies, wall aper, masonry, carpentry, cement, icks; all paid wages to build that ouse; and railroads and truckmen ad to haul it. The young man had ontributed just that much to make usiness better for the country. But s soon as the house was up, along me our unscientific tax system to fine him—I mean tax him—for having helped add that much more business activity and prosperity to the country. Could anything be more absurd? We fine men who are nuisances or maintain nuisances in order to lessen the number of nuisances. And we fine men who do the things that we want to have done plentifully in order to increase business and make prosperity more plentiful!

Or, take the business man who built the new wing to his factory and added a hundred new men to the payroll—with money to be spent in that community. We fine him, too! Could anything in taxation be more unscientific?

These men have added new values to the community. They have helped make business better—not only for their own community but for the entire nation. These are the men who



are making the United States what it is. They are progressive, forward-looking, energetic citizens upon whom the wealth and prosperity of the country depend. And we raise their taxes, make them pay stiffer fines for the benefits they create.

Of course, the business man adds the taxes to his price. The price is higher and fewer goods are sold on that account. Fewer goods require fewer men to make them. Fewer men earning wages make less money to spend in buying goods in all other lines.

In other words, our present unscientific and actually destructive tax methods destroy each year a large part of the purchasing power of every city and every state throughout the nation. And it is upon this purchasing power that the prosperity of our country depends.

If you think that there is only a trifling figure involved just take New York State, for example, where, on our present unscientific methods, the tax valuation is over *sixteen billion dollars*. With a tax rate of two per cent this means our unscientific taxes for that one state are over $320,000,000 a year. Naturally, tax dodging, methods of favoritism and various other causes reduce the actual amount but taxes actually collected for that year amounted to $133,500,000. Some of the tax, of course, was collected from the mere value of unimproved lands; but most of it was collected from the *improvements* of the land—in other words, upon the very things we should encourage and not fine, as if they were a nuisance.

NO STATE can afford to fine its industries with taxation by from $25,000,000 to $75,000,000 or more a year and not seriously affect its purchasing power and business interests.

Observe, on the other hand, what our unscientific tax laws do to the man who owns land—either farm land or city land—and does nothing at all with it, who lets it run to weeds and scrub or tin cans and rubbish. *He pays the lowest taxes!* The man who does nothing to increase the business and prosperity of the community or the nation, who builds no house or plant, who stimulates no industry by purchasing its manufactures for use upon his property—this slacker in our national business life is rewarded by being charged *the lowest taxes* just so long as he *does nothing* to stimulate business and manufacture!

Is that unscientific?

The step to scientific taxation is simple. Let the taxes or fines be gradually abolished on the improvements—houses, buildings, machinery, herds, orchards, crops and all the constructed values that go upon the land and that create business and prosperity—and placed instead upon the value of the land itself. Not upon the *amount* of the land, but solely upon its *value* whether a city lot of high value or a farm, the value of which was made by the farmer's labor upon its raw, unfenced, undrained and bush-grown acres. Exempt the labor values. The foundation of prosperity is production. The foundation of production is purchasing power. As we tax and thus penalize production, we lessen purchasing power. Scientific taxation is a business necessity. And it must not be delayed.

Let me quote you one of the best American authorities in the field of economics and taxation in the United States, Professor Irving Fisher of Yale University:

'Premising, that so important a change should not be made abruptly, I favor the gradual reduction, so far as possible, of the tax burden on industry and labor and taking instead the economic rent of the bare land.'

This is scientific taxation.

Sapiro's Suit *Gets* Under Way

Number *of* Alleged Libels Are Reduced *by* Plaintiff *in* Suit Against THE DEARBORN INDEPENDENT—Jewish Question Out

ADMISSION of questions concerning discussions of the Jewish Question in THE DEARBORN INDEPENDENT was strongly argued by both sides in the second week of Aaron Sapiro's libel suit against the magazine, now on trial before a jury of six men and six women in the United States District Court at Detroit.

The arguments arose over questions put to William J. Cameron, editor of THE DEARBORN INDEPENDENT, by William H. Gallagher, chief counsel for Sapiro, to which objections were made by Senator James A. Reed and Judge Stewart Hanley of counsel for the defense.

In ruling on the controversy, Judge Fred M. Raymond, after discussing it at some length, said:

'Until the questions are narrowed to the extent of showing some authority, either expressed or implied, to publish articles which reflected upon Aaron Sapiro as an individual, the objections to this class of testimony must be sustained.'

Another feature of the week was the filing by Sapiro of a motion to amend the original declaration, the motion striking out more than fifty alleged libels in the series of articles criticizing the Sapiro Plan for the coöperative marketing of farm products which appeared in THE DEARBORN INDEPENDENT over a period of a year between April 12, 1924 and April 11, 1925. This reduces the number of times which Sapiro says he was libeled, from 141 to 98.

After being on the stand for four days and a half during the week, Mr. Cameron was temporarily excused Friday afternoon until he could produce certain papers from the files of THE DEARBORN INDEPENDENT which were requested by counsel for the plaintiff.

Following him, Mr. Gallagher called James Martin Miller, a newspaperman of Washington, D. C., to the stand and questioned him about a conversation he claimed to have had with Mr. Henry Ford at a time he said he was an employe of THE DEARBORN INDEPENDENT.

Mr. Miller was on the stand only a few minutes and was followed by Fred L. Black, business manager of THE DEARBORN INDEPENDENT.

Mr. Black was first questioned by Attorney Gallagher regarding the circulation of THE INDEPENDENT during the time of the publication of the alleged libelous statements.

He then sought to introduce correspondence between Mr. Black and Walton Peteet relative to arrangements for a meeting at which Mr. Peteet is said to have protested regarding certain of the articles in the case.

—International Photos.

Judge Fred M. Raymond, who presides.

Objections by the defense to admissibility of this correspondence as having nothing to do with the case as it affected Mr. Sapiro brought an argument. Judge Raymond took the correspondence under advisement until Monday, and a recess until that time was taken as it was then near the close of the Friday afternoon session.

* * *

The week opened with Mr. Cameron resuming the stand, but before any further testimony was taken Judge Hanley for the defense precipitated an argument by calling the court's attention to there being no ruling on objections made to a line of questioning by Attorney Gallagher for the plaintiff tending to show malice on the part of the defendant.

This first arose shortly before recess on Friday afternoon when Mr. Gallagher was questioning the witness relative to policies of THE DEARBORN INDEPENDENT as to whether he had discussed with Mr. Henry Ford the paper's attitude toward the Jewish people.

In objecting to this question Judge Hanley said:

'The attitude of Mr. Ford toward the Jewish people, or THE DEARBORN INDEPENDENT'S attitude toward the Jewish people, is not an issue in this case.'

The jury was excused during the ensuing argument, which continued for some time. At its conclusion, Judge Raymond passed it with this remark:

'Of course, no evidence has been offered as yet upon which the court can make a ruling. I am glad to have had the argument of counsel; it has enlightened the court.'

The jury was recalled and with Mr. Cameron back on the stand questioning was resumed by Attorney Gallagher, after bound volumes of THE DEARBORN INDEPENDENT were introduced and marked as exhibits.

The first of the Sapiro articles was produced by Mr. Gallagher, his interrogations of the witness regarding it bringing many objections from Judge Hanley of the defense counsel.

Opening the subject, Mr. Gallagher said:

Q. I call to your attention, in Exhibit 6, an article in the issue of April 12, 1924, appearing upon page 4 of that issue, and ask you whether you had any part in the preparation or editing of that article?

A. Well, it very probably passed through my hands. Most of the articles do. I don't know of any reason why this should not.

Q. Are you able to say now whether it was revised or edited by you?

A. All of them were, in some degree, revised or edited.

Q. It was read by you before publication?

A. Yes—very probably, most of them. If not, this is an exception, and undoubtedly I read it.

Q. Are you able to recall now, Mr. Cameron, when The Dearborn Publishing Company first entertained the idea of the publication of that or a similar article?

A. Yes, in a general way.

Q. And when was that?

A. Well, do you want me to give the picture just as it came up?

Q. Very well.

A. We were receiving letters from farmers from the South—Southwest and Western part of the country.

Q. First of all, when was it, that is the question now?

A. Well, a considerable time prior to this, I should say more than—oh, a year or more.

Q. A year before the actual publication?

A. Yes, all of that, I think.

Q. And when the matter was first

onsidered, with whom did you iscuss the proposed publication?

A. Well, the matter of publica-ion was not discussed when the natter was first considered. If you ould like to know how it hap-ened, I would be glad to tell you.

Q. Well, when was the matter f publication first discussed with nybody, approximately when? (Ob-ection to this question was sus-ained.)

Q. When did you first discuss ith anybody the publication by HE DEARBORN INDEPENDENT hich would charge Aaron Sapiro ith being allied with an interna-onal gang of Jews?

JUDGE HANLEY: That is ob-ected to.

Q. (Continuing) Who con-emplated placing the farmers of is country under the domination f an international banking ring?

JUDGE HANLEY: That is objected), for the reason that it is leading nd suggestive; second, for the reason that it indefinite; third, whether or not any such onversation took place would be incom-etent and irrelevant to the issue which elates to the publication of specific articles omplained of.

THE COURT: Take the answer.

JUDGE HANLEY: Exception.

A. When this storm of complaint egan to be strong enough to register itself n my mind.

MR. GALLAGHER: I will ask that that e stricken out as not responsive.

A. I investigated the matter—

THE COURT: Just a minute. The answer ay be stricken. Read the question.

(The question was repeated by the eporter.)

A. I did not discuss it with anybody n the—

JUDGE HANLEY: Just a minute, Mr. ameron. There is an assumption in that uestion, your Honor, of facts that are not evidence at this time, and the very state-ent of it has the effect of proving ertain matters that must be oved by competent evidence nd not by indirection such as ounsel seeks to use.

THE COURT: Take the answer.

JUDGE HANLEY: Exception.

A. I did not discuss it with nyone, in the sense of taking ounsel. I did discuss it with some my associates, subordinates, in ne sense of giving directions.

Q. And besides your sub-dinates, did you discuss it with nybody else?

A. No.

Questioned as to ho are the officers of he Dearborn Pub-shing Company, the itness named Henry ord as president, E. . Liebold as general anager and treas-er, and C. B. Long-y as secretary.

Q. (by Mr. Gal-gher) Now, Mr. ameron, prior to the ublication of the rticular articles now efore you, did you scuss with Mr. Ford e intended publica-on of such an article?

A. No.

Q. Did you discuss with Mr. Ford e intended publication of any article aling with Mr. Sapiro?

A. Why, it was a long time before I new anything about Mr. Sapiro. I knew out the farm situation, but Mr. Sapiro was something that developed—came out of the film when we developed the facts.

Q. Just a minute, please.

A. We did not know Mr. Sapiro.

MR. GALLAGHER: Read the question to the witness.

(The question was repeated by the Reporter.)

A. No.

Q. Not at any time before the publication?

A. No.

Q. Did Mr. Ford discuss the publication of certain articles in your presence with anybody else?

JUDGE HANLEY: Just a minute. Will you read that?

(The question was repeated by the Reporter.)

JUDGE HANLEY: That is objected to as the question is indefinite, it does not identify any articles when it refers to 'these' articles.

MR. GALLAGHER: We will incorporate—

JUDGE HANLEY: Second, it is incompetent, irrelevant and immaterial anyway, whether it was discussed.

MR. GALLAGHER: I will put the question in this form: Withdrawing my last question.

Q. Did Mr. Ford discuss, in your presence, with anybody else, the publication by this company of any articles in which Aaron Sapiro would be charged—

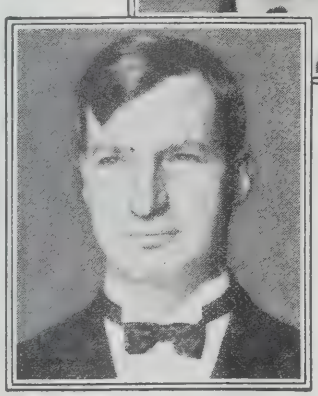
JUDGE HANLEY: That is objected to.

Q. (Continuing)—with being allied with or coöperating with an international band of Jews?

JUDGE HANLEY: That is objected to.

THE COURT: Take the answer.

A. No.



William H. Gallagher. Above—Walter F. Lynch.

Mr. Gallagher then began reading the alleged libelous matter in the first Sapiro article, questioning the witness regarding his knowledge of certain of the statements. Many objections were interposed by Judge Hanley for the defense.

It was developed that material for the articles was gathered by Harry H. Dunn, a writer of Berkeley, California, who wrote under the pen name of Robert Morgan. Mr. Dunn was assigned to the work following receipt by THE DEARBORN INDEPENDENT of letters from many farmers throughout the country, according to testimony. Some of the correspondence with Dunn previous to publication of the stories was introduced.

A four-hour argument, during which the jury was again excused from the court room, came when Mr. Gallagher asked the witness:

'Now, what is the fact as to whether up to that time your plans for the publication of these articles were plans against the Jews generally and not against Sapiro particularly?

This again brought objections from the defense side which has contended since the case opened that the Jewish question is not an issue in the case, a contention which was made by Senator Reed in his opening statement to the jury when he said:

'I think his Honor will tell you that the Hebrew race is not here bringing this suit, and that Mr. Sapiro has no right to come here and recover damages for the Hebrew race and put the money in his pocket as damages done to himself.'

The jury was excused again while counsel argued the question before the Court.

At its conclusion the jury was recalled. Mr. Cameron resumed the stand. Judge Raymond asked the court reporter to read the question which had brought on the argument. He then ruled on it, sustaining the objection made by counsel for THE DEARBORN INDEPENDENT.

Further correspondence with Mr. Dunn, author of the articles, from THE DEARBORN INDEPENDENT files, was then introduced and was under discussion when court adjourned for the day.

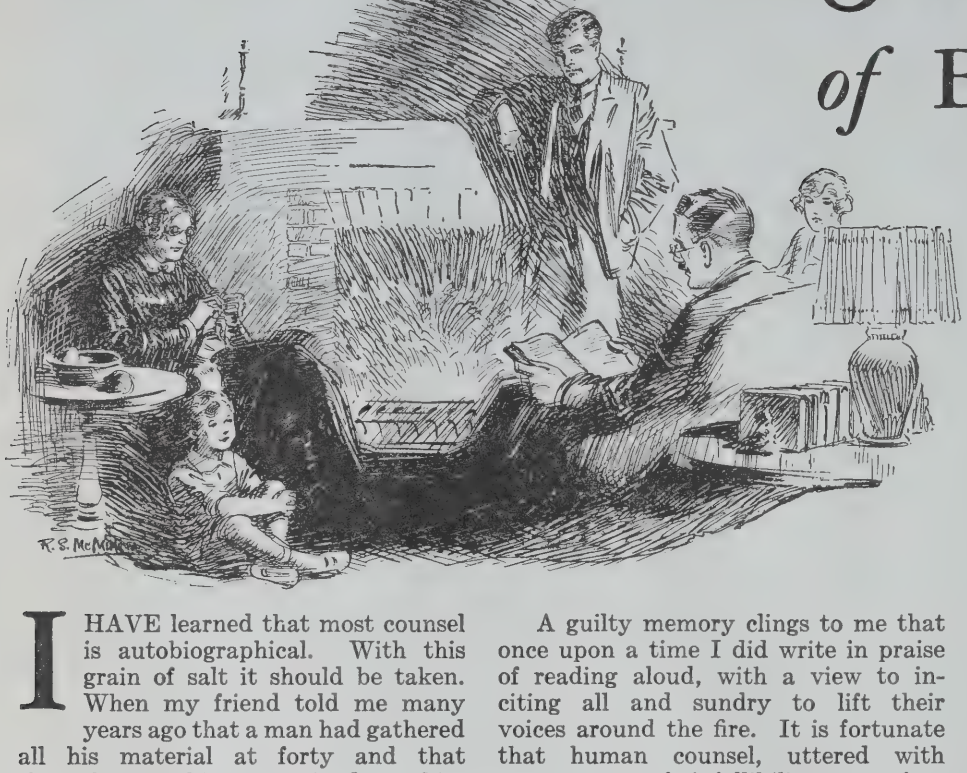
* * *

The Tuesday session opened with Mr. Gallagher continuing his questioning on correspondence with Mr. Dunn relative to the articles and to eliciting information from Mr. Cameron as to his passing on the articles before they were printed. He then began the reading of alleged libelous statements in the articles complained of, interposing occasional questions to the witness regarding them. As he progressed in the reading of portions of the articles, Attorney Gallagher began inclusion of headlines, paragraphs, sentences, and phrases not mentioned in the plaintiff's declaration.

Continuous objections by the defense side to excerpts from the articles and to questions put to the witness reached a climax when Mr. Cameron was asked what conversation he had with F. L. Black, business manager of THE INDEPENDENT relative to a conference Mr. Black had with Robin Hood, former publicity man for the National Council of Farmers' Coöperatives, and Walton *(Continued on page 26)*

Of counsel for the defense: left to right—Judge Stewart Hanley, Raymond E. Watson, C. B. Longley, Ward N. Choate, and Judge Richard J. Higgins.

The Imposition of BOOKS



I HAVE learned that most counsel is autobiographical. With this grain of salt it should be taken. When my friend told me many years ago that a man had gathered all his material at forty and that thereafter nothing remained to him but rearrangement, I was at once impressed and dejected. For it seemed to set a deadline to freshness and suggested hardening of the mental arteries. But I have since found that it was true—for *him*. He had *stopped* at forty and is now like a man rearranging an old library that never grows, but slips softly more and more behind the moving spirit of life.

Likewise, when another friend gave counsel to abandon all reading for a year, it seemed to have the sound of wisdom. Surely it is sometimes good to close the gates of the mind to every wandering vagabond, and mark it 'Private' for a time, to discover what will steal from its secret places, shy thoughts that flee like birds from traffic, modest musings that dare not show their faces before those that have attained the dignity of Books. But again I found that my friend's counsel was good—for him. He was a slave to his reading. He thought in terms of the last pages he had cut. He was a victim of the tyranny of print. But he never followed his own counsel. What he writes smells of some other's pen.

I would deal more kindly if I could with a more recent counsel. An author of vigorous body and mind said, 'Some day, will not you write a page in favor of reading aloud?' He likes to read aloud; he dramatizes; his magnificent voice booms out the passages; and the farmers round about come in to hear him; they are his first public. So again, you see, the counsel is autobiographical, and maybe none the worse for that.

A guilty memory clings to me that once upon a time I did write in praise of reading aloud, with a view to inciting all and sundry to lift their voices around the fire. It is fortunate that human counsel, uttered with every tone of infallibility, so often fails of its end, for in this instance alone what havoc might have been wrought in all quiet family circles!

AND yet I dare say none have profited more than I by hearing reading done aloud. There used to be Friday afternoons in school, very special occasions which came every week, when awe-stricken pupils—they were 'scholars' then—spoke pieces and Teacher read to us. Those Friday *seances* have made it extremely difficult to disentangle fact from fancy in my recollections of childhood years, for I seem to have been visiting with the *Swiss Family Robinson* when they had their memorable adventure, and like the old man of Bristol who knew Defoe and said he wore goatskins I have need of proof to persuade me that I was not Robinson Crusoe's other companion on his island. Nowadays when everybody is asking whether our educational systems are worth while, I boldly answer, Yes, if they read *Robinson Crusoe* on Friday afternoons. But even this is partly a truce with convention: it must have happened in school, yet I do not recall a single teacher of the period, and I do not remember that a book intervened.

Then there was Mrs. Linn. I do not suppose you ever heard of Mrs. Linn. I wonder if anyone who ever heard of her, remembers. They were few enough who knew her, and naturally they would be still fewer who remember her. It was this way: we attended a mission Sunday school of the straitest sect which offered a very legalistic system of salvation to the world. From all my years of constant attendance and assiduous attention I carried away only this, that immersion was the Scriptural form of baptism. Which may be true, as open fires were the only Scriptural form of heating, and wells the only Scriptural form of municipal water supply.

Into the midst of all this came Mrs. Linn on Thursday nights, with a book of which I had never heard, out of which she read to us such things as *Evangeline* and *The Courtship of Miles Standish*. Blissful day, when one first tastes the flavor of chosen words! It was a new baptism into a new world. I am willing to believe that God sends into the world prophets and troubadours, and that the latter in our day may be called Readers. Mrs. Linn was one, though doubtless she thought she was merely doing a bit of social work among the underprivileged, as I believe the word is.

I cannot miss mention of the zealous professor, but his name escapes me and no memory of his face remains. It was in those hazy days of youth when the film of the mind protects it from the touch of reality and one does not know that 'life is real, life is earnest,' when nothing really gets through that has not strength and point to pierce the film. I know now that his zeal was to be autobiographically interpreted, but I did not know then, and maybe he did not. But he had apparently made a recent discovery of Carlyle, and in one of the college halls, after hours, he offered to share it. It is a bold and pathetic thing to do and is possible only through the sheer energy of a new idea. But it was thus I was ushered into the august presence of The Everlasting Yea and The Everlasting Nay, and learned that all was not island romance nor Longfellow's saga measures, but that literature was also the wrestling of the spirit with the dangerous angels who carry swords of flame to guard the tree of knowledge.

SO THAT it is perhaps clear that I am at least not indifferent to this matter of reading aloud, so much do I owe to it. But I say, leave it to the Readers—leave it to the Readers. Ability to read aloud is a gift; do not lead those who lack it into the presumptuous sin of pretending to have it. There is need of Hearers, too. I who do not read aloud am a member of the honorable host of Hearers, (*Continued on page 18*)

OF THE DEARBORN INDEPENDENT

Distinctly a Problem for Business Men

HOWEVER tired one may have become of the reiterated statement that prosperity is a matter of 'psychology,' it cannot well be evaded in considering the matter which has engaged this Page during the past two weeks. Of course, the saying is merely one of those which gains wide currency because it seems to dispel an equally wide vacuum of thought. What everyone says, no one has thought much about. We might just as well arise and repeat 'Ivory Soap,' or 'Socony,' or 'Royal Baking Powder,' as repeat these current 'wise sayings,' for both are put into our minds by the same processes, and are not the result of our own thinking.

Business, as it was done in the Old Era, which is now passing, was habitually a coward. It is a coward today in so far as it retains Old Era elements. A particular phase of its cowardice was a fear to admit that business was or could be bad. Anything but that! It was even afraid to admit that the weather could be bad. Any big newspaper office will furnish stories of protests made by merchants against news items announcing that rain could be expected tomorrow or that a cold spell was coming for Saturday.

The superstition of the so-called business man is that if he only says 'business is good' often and emphatically, business will be good. That is to say, one would assume that to be his superstition, judging from what the business man gets newspapers to print. If it were a superstition it might react on the business man himself, but it doesn't. At the moment he is thus preaching the efficacy of faith, he is practising unfaith by setting up protection for himself in every direction. It is the buying public that he wants to believe that 'business is good,' so that it will continue blithely and unsuspectingly as before, until suddenly it realizes that business may be good in statistics, and in newspapers, and in political interviews, but that it certainly is not good in the concrete experience of the producer and breadwinner.

One would say that so patent has this strange hypocrisy become that the public must instantly know that the moment the press begins the ballyhoo that 'business is good,' it is a sign that something is seriously wrong which it is desired to conceal from the public.

No one practises this strange form of self-deception about a telephone that is out of order, or an incandescent bulb that will not function, or a government that is incompetent.

The supreme opportunity of Business to learn the principles which control it comes in just those periods whose existence it is most loath to acknowledge. Business has not been distinguished for its foresight, so it must take second-best and use its hindsight. Even this it does not do voluntarily.

It is agreed that the last taste of difficult business conditions which this country had was due to the ill-measured activities of a few men in control of the higher financial machinery of the nation. We may assume that their intentions were good, but there is no choice about the verdict that their judgment was bad. As it was stated at the time, they wanted to start a 'slow leak,' but it developed into a complete 'blow-out.' Whether anything was learned from that experience is not known, but the same machinery exists to this day without change or improvement.

> *THE truth about business might as well be faced. A broken telephone connection cannot be repaired merely by the chanting of words. Nor does prosperity come from wise sayings. The nation is again in a puzzling time. There are great stocks of money and great stocks of goods, but a stoppage has occurred in the machinery of exchange. Once more the old methods have failed. The Money Masters are sitting back waiting for them to come into operation again. But present conditions will not pass until they are acknowledged and solved. They present a problem which is distinctly one for genuine Business Men.*

Today, the country, all rosy orations and political assurances and optimistic editorials to the contrary notwithstanding, is again in a puzzling time. Perhaps the best way to describe it is that it is a 'breathing spell.' The statistics which show the contrary are unreliable since they do not distinguish between sound business and unsound business. When sound business declines, you can always keep statistics up to the mark by an intense artificial stimulation which produces a mass of unsound business. Sound business is that in which goods pass and are paid for. Unsound business is that in which goods are forced out for the sake of keeping up the appearance of movement, and are not paid for. The country has now had practically nine months of unsound business. The general statistics of the latter half of 1926 must all be discounted on this ground.

To evade seeing this or to avoid acknowledging it is simply to increase the degree of the confusion which must later be straightened out.

The present condition is marked by great stocks of money and goods in the country. It is not poverty that confronts us, but the insufficiency of the old methods and motives to deal with a condition of plenty. The work is waiting and the means to accomplish it are here, but there is a stoppage in the machinery of exchange. The old methods which could be hammered through in a condition of poverty prove suddenly unadaptable to a condition of stagnation in the midst of prosperity.

And what is being done about it? Nothing. The Money Masters are simply waiting until the conditions subside to the point where the old methods may become operative again. *But they are not going to subside. They are going to remain, and they must be faced.* This is a new problem in economic life, and the sooner it is recognized, the sooner can work upon it commence.

There is no use waiting for the economists to act; they will only write the history of what is done. The problem is one distinctly for the genuine Business Men.

EDITORIALS

OF THE DEARBORN INDEPENDENT

Internationalism Plus

THERE is this to be said in favor of those who are shaping this nation's foreign policy: *They have learned to keep out of European entanglements.* The lesson was hard-learned. It came only after the United States had been voted into the back door of the World Court, and then unceremoniously trundled out again. But it was well learned. The latest American note to the League of Nations proves that. The note deals with the 'disarmament' plans of the League. It definitely rejects European proposals for:

International supervision of all armaments.
International regulation of essential national industries and activities.
International restriction on the study of methods for combating poison gas and bacilli.

The doctrine set up by these rejections is vital to the nation. It would be absurd to place American industry under a set of rules promulgated by outsiders; it would be fatal to turn over supervision of American arms to a clique of international politicians. As to the matter of poison gas, the American note is specific and emphatic: 'Training in chemical departments is essential by modern governments in order to combat possible attacks of a like nature by hostile nations.' The Geneva Protocol outlaws the use of poison gas and other substances, but it has been the sad experience of the world that such bans are often ignored. For this nation to deprive itself of the right to guard against such a contingency would be the epitome of folly.

Disarmament is sincerely desired by Americans. They have demonstrated that time and again. But they have learned to watch for the worst while hoping for the best. America's experiences in pursuing the chimera of disarmament have been disappointing. Groping along in search of some illusory ideal, the country has banged sharply against the realities of European politics. The League of Nations conference has strayed away into a maze of super-internationalism, from which the United States has just extricated itself. President Coolidge's proposal for a new conference on the limitation of naval armaments has met with abrupt refusals from France and Italy *on the grounds that it should be conducted by this same League.* And the Washington Conference left the United States in the unfortunate position of the small boy whose pants were stolen while he was teaching the other boys to swim.

Getting Acquainted

THIS month will see the beginning of another invasion of France. It will be, however, a peace-time invasion, probably the greatest in history, an invasion of tourists and dollars rather than soldiers and bullets. And it will be a welcome invasion. Three hundred thousand visitors are looked for from America alone, including the 30,000 Legionnaires who will journey to Paris in the fall. From Britain 800,000 more will come, and from other countries an additional 1,000,000. These visitors, it is estimated, will spend in the neighborhood of $400,000,000 during their stay—a tidy sum for any nation to receive.

It is no disparagement of France to say that this financial aspect probably looms higher in Gallic eyes than any other. France is in difficult financial straits. Money is badly needed, and if the country can make itself inviting enough to attract hundreds of thousands of money-bearing guests, surely that is something decidedly to its credit. But there is another and vastly more important aspect to this summer migration: *the intermingling of races.* Friendship comes from friendly contact. Misunderstandings disappear when men gather around the same table to discuss their differences calmly. The enmities of the world will vanish *only* when the peoples of the world—men and nations—get acquainted. France is afforded a wonderful opportunity this summer. The two million visitors represent something more than two million purses. They are two million potential missionaries of friendship.

An Expert on the Death Penalty

A LETTER from Warden Lewis E. Lawes of Sing Sing Prison:

'Your attitude toward the death penalty is courageous and intelligent, and will in my opinion be of inestimable value to the cause of abolition for which a little band of us have been fighting against great odds for several years . . .

'It may interest you to know that my conclusions are based upon twenty-three years of prison experience during which I have been in intimate contact with over five hundred murderers and have supervised exactly one hundred executions.

'I have studied the death penalty from every angle and find no justification for it unless one accepts the principle of *lex talionis* (the law of retaliation). Considered from the practical standpoint of "does-it-work?" it falls down completely and positively.'

God Has Made Us Neighbors

SENATOR BORAH is doubly fortunate. He is possessed not only of a keen intellect, but of a rare aptitude for oratory as well. When he speaks, he *says* something—as even opposition newspaper editors are obliged to admit. The other evening he spoke at New Haven. It was a routine, mid-season address on Mexico; and as the Senator's views on Mexico are fairly well known, the editors looked for nothing better than a paragraph announcement of the speech. But Borah has a happy felicity of phrase. During the course of the evening he carved out a phrase so round and full and satisfying that reporters seized upon it and flashed it by wire to the four corners of the earth. It was:

God has made us neighbors; let justice make us friends.

The words have a ring of sincerity and earnestness which set them in a niche by themselves. They deserve to live, not only as a phrase but as a national policy.

The Cost Continues

THE war is nearly a decade in the past, but it still bears directly on the trend of the world.

The stoppage of useful world activities for four and a half years cannot be translated into dollars and cents. The value to the world of the millions of men whose lives were snuffed out cannot be estimated.

But it is the continuing cost that presses hard today. This continuing cost is reflected in wholesale commodity prices of the present as compared with those of 1913. As given by the National Industrial Conference Board the increase over the pre-war level is:

United States	47 per cent
France	527 per cent
Canada	51 per cent
Germany	31 per cent
United Kingdom	46 per cent
Italy	581 per cent
Japan	201 per cent
Australia	58 per cent
Belgium	759 per cent

Thus the cost of the war continues. Unborn generations will still be taxed to pay for this generation's folly.

Less Education—More Energy

THIS comes from a pedagog:

'The great need of education is less of it—less education and more energy.'

From an outsider, the criticism might be held unfair by educators. Coming as it does from within the academic ranks, it must be given serious consideration by them. The statement is that of Dr. Charles Gray Shaw, professor of philosophy at New York University, noted as an educator, a lecturer and a writer. He says further:

'Instead of having professors exchange chairs in their respective colleges, it would be better to have the professor swap his chair for the desk of a business man. Business men do not know the rules of syllogism, but they reason better than teachers of logic. They have to do it. These men of affairs may not be so familiar with foreign languages, but they speak and write better English than those who teach rhetoric. They have to, or business would fall off or go to the wall. The captain of affairs is doubtless so weak in economics that he would flunk a sophomore examination, but he knows how to make the thing the professor talks about. The college ought to set up practical relations with the world, *not for the world's sake but for its own.*'

That is good sense. It should be brought to the attention of every university professor and every high school teacher in the country. *The college ought to set up practical relations with the world.* Real advice *to* educators *from* an educator! Formal education in recent years has seemed something apart from the world, not of it. It has dealt in theories rather than practicalities, it has tended to create a paper existence while ignoring the physical basis of life. Sharp criticism has been leveled at the modern educational system, but the criticism has come largely from business men. Now it comes from the college. That is a hopeful sign.

A Parental S O S

IN THE 'agony column' of the London *Times* appears the following: 'A parent would appreciate advice from any with successful experience in correcting naughty boys.' What a confession of helplessness! Speaking directly, the only way to correct naughty boys is to correct them. 'But how?' asks the helpless one. To use a Gilbertian phrase in its general sense, it would appear that the best way would be 'to make the punishment fit the crime.' If the naughtiness is only of a trifling nature, a word of warning and advice may be sufficient, but if it is of a serious character, more drastic measures would have to be adopted.

Boys are created neither angels nor devils; they are a sort of a blend of the two. To wring the evil brew out of them requires some strenuous laundering occasionally, but in place of putting them on the ironing board the modern tendency is to whitewash them. At a later stage the whitewash won't hold and the ugly spots begin to show underneath.

'The wisest man the world e'er saw' said something about sparing the rod and spoiling the child. He probably knew what he was talking about. Rehoboam, his son, must have given him more trouble than enough, and Solomon himself was not a shining example of what a well-trained young man should be. He spoke out of the wealth of his experience.

A good many years ago there appeared in a popular magazine an article on 'The Training of Parents.' Perhaps the lack of training in parents is the root cause of the predicament in which this English parent finds himself.

LUCY PERCY, *the Countess of Carlisl*

A Political Woman *of the* Seventeenth Century

By FRANCES H. PFEIFFER

Illustrated by RUTH A. THURBER

FROM the accounts we have of her, Lucy Percy, Lady Carlisle, was one of those political women, so active mentally that she had to be doing something; who was influenced, not so much by high purposes as by personalities in high places—by first one prominent man and then another.

It is not easy to be quite exact in one's estimate of Lady Carlisle because she seems to have lacked a woman biographer, whose sympathy might have given us a different impression from that we now have, that she was not a womanly woman, not really great, although she held so exalted a position and sprang from such an ancient family. A daughter of the Earl of Northumberland, and the wife of Lord Hay—afterward Lord Carlisle—Lady Lucy was a Percy, so, came naturally by her love of political intrigue, as well as by her great beauty and sparkling wit. One is led to think of her as hard and brilliant.

Her father, the ninth Earl of Northumberland, spent nineteen years in the Tower of London under suspicion of having knowledge of the notorious Gunpowder Plot. The only protection left for his family was seclusion; and it was during those years of her young womanhood, on the lonely estates of her great ancestors, that Lucy Percy seems to have laid the foundations for that haughty and virile independence which ever after characterized her.

Lucy's sister, Dorothy Percy, had married the son of Lord Lisle (Robert Sidney), who, in after years, became the Countess of Leicester, the mother of the patriot, Algernon Sidney and his lovely sister, Dorothy. Lord Lisle's wife was that wealthy Welsh heiress, Barbara Gamage, whom he had married at the close of Elizabeth's reign, and who was still a young woman when King James and his Queen paid an unexpected visit to her home, Penhurst; although Lady Barbara was not at home, Ben Jonson writes:

Her linen, plate and all things right,
Though she was far; and every room was drest
As if she had expected such a guest.

Years later, when Lady Barbara had grown elderly, and her son had married Dorothy Percy, she seems not so well prepared to receive the visit from her new daughter-in-law's sister, Lucy Percy, and that lady's fiancé, Lord Hay—at least there seems to be some anxiety in Lord Lisle's letter to his wife, announcing the prospective event:

Sweet Hart,—Yesterday I dined wi my Lord Hay at his house by Sion, a there he told me, which I had not hea afore, that my Lady Lucy had sent wo that she would be at Penhurst on Tuesda and my Lord Hay thought to be there, a that you did expect them.

The next lines show that the 'o folks' were not so eager for compan

This sudden going of theirs cannot put off, seeing it is their own choice. Wh company goes with my Lady Lucy, I kn not. I heard from some of my servants, w heard it at my Lord Hay's, that M Isabella Rich goes with her, and so speech there was of my Lady Carew's goi but that is uncertain. This night I sup a dine at my Lord Hay's where I shall kn what they resolve on; tomorrow mornin God willing, I shall be in London . . On Tuesday, God willing, I shall be wi you, but am not sure yet, whether I sh come along with m Lord Hay, or be the afore him. I belie he will look I sh accompany him.

The prepara tions for this 17t Century house party seemed to b making quite a sti even in so great an fine a place as Pe hurst. Lord Lisle letter goes on:

I will bring m plate with me, as told you, and m cook and my gentl men. Other compan I do not propose bring, if it be not S John Packenhame. you will have an thing from Londo send me word by t morrow, and I w provide it. Give m blessing, I pray yo to my children, an God protect you fro all harm.

Your most lovin husband,

R. LISLE.

At Otelands, the 2 of July 1617, to m most dear wife, the L dy Viscountess Lisl

From anothe source, the *Journ of Anne Cliffor* Countess of Dorse we learn that Lor Lisle did invite othe

The only protection left was seclusion on the great estates of her ancestors.

How wonderful it would be if we could look back and see them, say, at dinner in the stately dining-hall—the beautiful women, their gorgeous gowns, the men in their colorful attire, the soft candlelight, and could hear scraps of the fine conversation for which Penhurst was noted!

ompany—that 'my Lord of Mont-omery' was there, and the Earl of Dorset, 'and a great deal of other ompany'; and that a man was sent n purpose to bid Lady Dorset to be the party, but that her Lord, in a mper with her about her lands in Westmoreland, would not allow her to ! We learn from this same source, at they hunted, and that Dorset ent the night at Penhurst, probably ithout any compunctions about his ife's absence.

That is all we know of that great isit! How wonderful it would be if we uld look back and see them, say, at nner in the stately dining-hall—the eautiful women, their gorgeous gowns, e men in their colorful attire, the soft ndlelight, and could hear scraps of the e conversation for which Penhurst as noted! But alas, we can only agine. Lord Hay had not, as yet, arried into the family, and all obably went off amicably. Three ars later, however, after he and Lady ucy had been married for some time, a family meeting at Petworth, the ercy girls' respective husbands had ite a row! Hay's 'vanity and in-lence was so insufferable' that orothy's husband 'was actually pro-oked to strike him, and the two Lords ere parted with difficulty.'

The marriage had been arranged by ing James between his favorite, ay, afterward Lord Carlisle, and Lucy Percy, 'that incomparable beauty celebrated in the poems of the most exquisite wits of her time.' They were well matched. Lord Carlisle was a gay blade, who lived in oriental magnificence. Clarendon says of him:

> He had no bowels in the point of running in debt, or borrowing all he could; and after having spent £400,000, which, upon a strict computation he received from the Crown, he left not a house nor an acre of land to be remembered by.

Lord Carlisle was not the sort that the straight-laced Earl of Leicester would care for; and Northumberland did all he could to keep Lady Lucy from marrying him, saying, since he, himself, was a Percy he 'could not endure that his daughter should dance Scotch jigs'; he even kept her with him in the Tower for some time. A glance at Vandyke's portrait of that calm, cold, self-sufficient face, and we are not surprised to know that Lucy Percy married to please herself. Northumberland, later, softened toward his unwelcome son-in-law, because it was through Lord Carlisle's influence that he was released from his long imprisonment.

Lady Carlisle survived her husband by twenty-four years—very active years!

Her wit and beauty made her a great favorite at Court, and Queen Henrietta seems to have formed a strong attachment for her. It was this close friendship with the Queen—whose secrets she did not hesitate to reveal—which attracted to Lady Carlisle the 'wise, severe and haughty Strafford,' who wrote to Laud about her:

> I judge her ladyship very considerably. She is often in place and extremely well-skilled how to speak with advantage and spirit for those friends she professeth unto, which will not be many . . . She will not seem to be the person she is not, an ingenuity I have always observed and honoured in her.

So she possessed the saving grace of sincerity!

On the eve of Strafford's impeachment he wrote to Radcliffe:

> For the love of Christ take order that all the money due my Lady Carlisle be paid before Christmas, for a nobler more intelligent friendship did I never meet with in my life.

If she had lived in this century, Lady Carlisle might not have cared, after all, for women's clubs. She was not attracted to the society of her own sex. She liked men—great men. Rumors floated about her friendship for Strafford; and, after his death, the transfer of her regard to Pym was 'talked about.' However exemplary her conduct, so prominent and independent a woman could not hope to 'escape calumny.' Sir Toby Matthew said that she could not love in earnest, but that 'she felt a woman's strong pride in attracting to her the strong heads by which the world was ruled.

(Continued on page 20)

The Weiser Typhoon— OLD BARNEY

By H. G. SALSINGER

Walter Johnson jumped from a 'horse and buggy' league into the big show and never left.

THOSE who attempt to name the greatest pitcher of all time will find it difficult to get away from Walter Perry Johnson. The late stars, Christy Mathewson, Denton T. (Cy) Young, Grover Cleveland Alexander, Ed Walsh, Rube Waddell, Amos Rusie and Charlie Radbourne, were all pitching giants but Johnson has a record behind him that cannot be dismissed and a future in which to complete that record. Forty years of age, Johnson is starting his twenty-first major league campaign and Clarke Griffith, owner of the Washington team and one of the best judges of pitching material the game has known, is authority for the statement that Johnson has a number of seasons ahead of him. 'Pitching every fourth day, Johnson is bound to win more games than he loses. He will be next to unbeatable except in July and August. He is never at his best during the burning stretches of summer,' said Griffith.

Cy Young, pitching twenty-two years, won 508 major league games. He won 291 of these in twelve years in the National League and 217 during ten years of American League competition.

JOHNSON, in twenty years, has won 411 games and lost 273 for a percentage of .601. During these two decades of hurling he set three outstanding major league records:

He won 112 games by shut-out scores; struck out 3,449 batsmen; and allowed less earned runs a game than any other man who has pitched from twelve to twenty years.

Since his début on August 2, 1907, he has set a number of minor records. He pitched the largest number of consecutive shut-out innings. He went fifty-six innings without being scored on in 1913. This is more than six complete games. He won sixteen consecutive victories in 1912, tying the mark set by 'Smoky Joe' Wood, who was pitching for the Boston Americans. He has pitched and won more games than any other hurler in the American League. For nine successive years he led his league in strike-outs and he was the strike-out king during twelve of his twenty seasons. In six different years he won more games than any other pitcher.

No one knows where Johnson will finish, or when. In 1926 he won fifteen games and lost sixteen for a fourth-place team, but in eight, or exactly one-half of his defeats, he was beaten by a single run. In mid-season he suffered eight successive defeats, six by one run. He is at his worst in mid-season.

Considering Johnson's supporting cast, his record stands out as a remarkable achievement. In only four of the twenty seasons with Washington has Johnson pitched for good teams. In 1924 he won thirty-two games and lost twelve and in 1913 he won thirty-six and lost seven. Washington hit the chutes the following year and did not make another bid for baseball glory until 1924, when the city won its first pennant. In this season Johnson, having passed the crest a few years before, still managed to win twenty-three games and lost only seven. The following year, with another good team supporting him, he won twenty and lost seven. In these four years Johnson won 111 games and lost thirty-three, for an average better than .770. But even in two of these four years the Washington team batted below .260.

When Johnson came to the majors from the wilderness of Weiser, Idaho, in 1907, he joined a last-place team and for four years after his début his team was either in last place or next to last. In ten of his twenty seasons he pitched for second-division teams whose mistakes discounted much of his brilliant delivery. It has always been a matter of conjecture just what startling records Johnson would have created had the fortunes of the game thrown him with a winning combination.

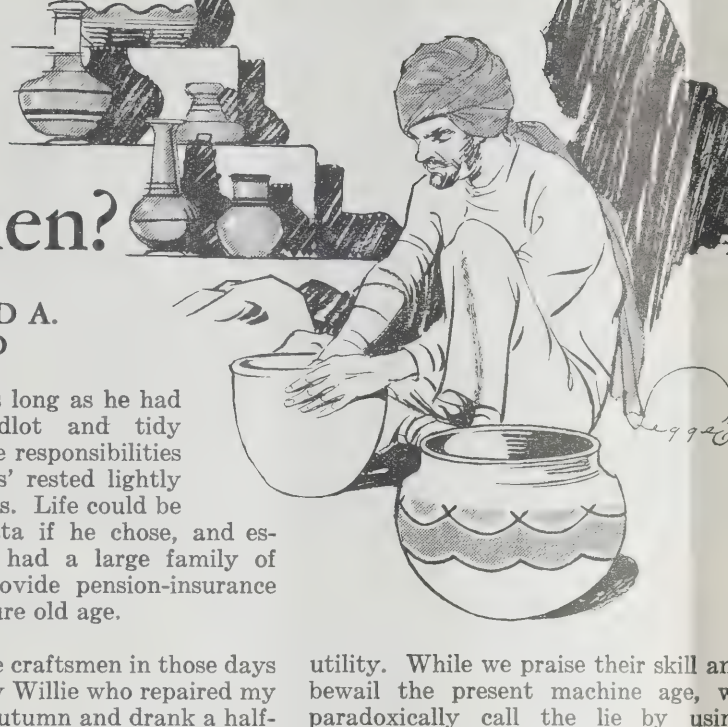
Johnson jumped from a 'horse and buggy' league into the big show and never left. Few pitchers in history have made that jump. Pitchers need polish before they reach the major fields and they are usually kept in the high minor circuits for a few years for seasoning. Johnson never got that seasoning. He was raw and uncultured in the ways of pitching when he made his first appearance against Detroit. He lost three to two because he could not field bunts, but he showed such dazzling work that he never got out of the Washington uniform. He showed Detroit more speed than ball players had ever seen before.

He is the only pitcher in history who ever got through on a single delivery. He used nothing but a fast ball. Batsmen said, 'You can't see his ball, you just hear it.'

They predicted that he would not last. 'He'll burn himself out in a couple of years. No player living can pitch that fast and keep going.' But Johnson continued pitching that high, hard ball for fifteen years before his speed showed signs of waning.

He never tried to fool batsmen. They knew what was coming and where it was coming. They were set to meet it, but few of them (*Continued on page 21*)

What's Become of the Old-Time Craftsmen?



By DONALD A. LAIRD

WALKING down the main street of a village in India we find the entire industrial activities of the community dissected for us. The one-man pottery is in full blast, shaping a vessel of which there is a duplicate no place in the world. Next to him is the coppersmith hammering on an article which is an exact replica of nothing man has before cast his eyes on. The dairyman and his one goatherd pass down the street, serving his customers directly from the dairy herd without the intervention of straining or bottling.

These are supposed to be craftsmen we have seen.

Not so many years ago all the industrial activities of the world were performed by similar craftsmen. They had no particular production schedule. They had no particular price for their commodities; the amount charged was usually what they thought the customer would pay without grumbling. No two articles were exactly alike. All showed the crudities of rough hand-construction. They were designed largely to please the fancy of the maker and without regard for points of mechanical superiority.

The craftsman was his own boss. He worked when he wanted to and how he wanted to. As long as he had a small woodlot and tidy garden plot the responsibilities of his 'business' rested lightly on his shoulders. Life could be one grand siesta if he chose, and especially if he had a large family of children to provide pension-insurance for his premature old age.

If they were craftsmen in those days then the Weary Willie who repaired my umbrella last autumn and drank a half-dollar's worth of bay rum with the fee he earned was a craftsman. There may have been some craftsmen in these 'grand-old-days-never-to-return' but I am afraid that if we keep our emotions quiet for a consideration of facts we will discover that most of them were merely tinkers who botched most of their work and were utterly lacking in the skill that the real craftsmen of today must exercise to produce the perfect-working, standardized conveniences and luxuries you and I demand. We occasionally buy an antique which was made by one of the master craftsmen of yesteryear. But never for utility. While we praise their skill an bewail the present machine age, w paradoxically call the lie by usin present-day products and just lookin admiringly at the craftsman's co trivances. There is a romantic glamou about the antique, but not one-thou sandth the craftsmanship there is to m typewriter, or my rugs, or my house.

I visited a unique institution la summer. Their avowed purpose is t revive the old-time craftsmanshi Printing is the avenue of self-expressio they use. I went to the establishmen expecting to find the 'craftsmen' a busy, due to the wonderful opportun ties they had for self-expressio But in the six visits I mad only once did I find them a work. They were too bus 'crafting' to wash the ink o their type, which was corrode with dried ink; the pliab rollers which distribute ink ov the type surface were als covered with dry ink whic was checked like a mud-ho baking under the summer su

They were calling inactio craftsmanship. You will di cover many who find an appe in old-time craftsmanship b cause of the unlimited op portunity it offered to tak life easy. They do not realiz that man's muscles and brai have been superbly engineere for work.

It is a disappointing revela tion to find how many thin that craftsmanship means u shorn locks, a Windsor ti and sheer laziness.

A young woman of m acquaintance came to Ne York from the sunny Sout She had (Continued on page 2

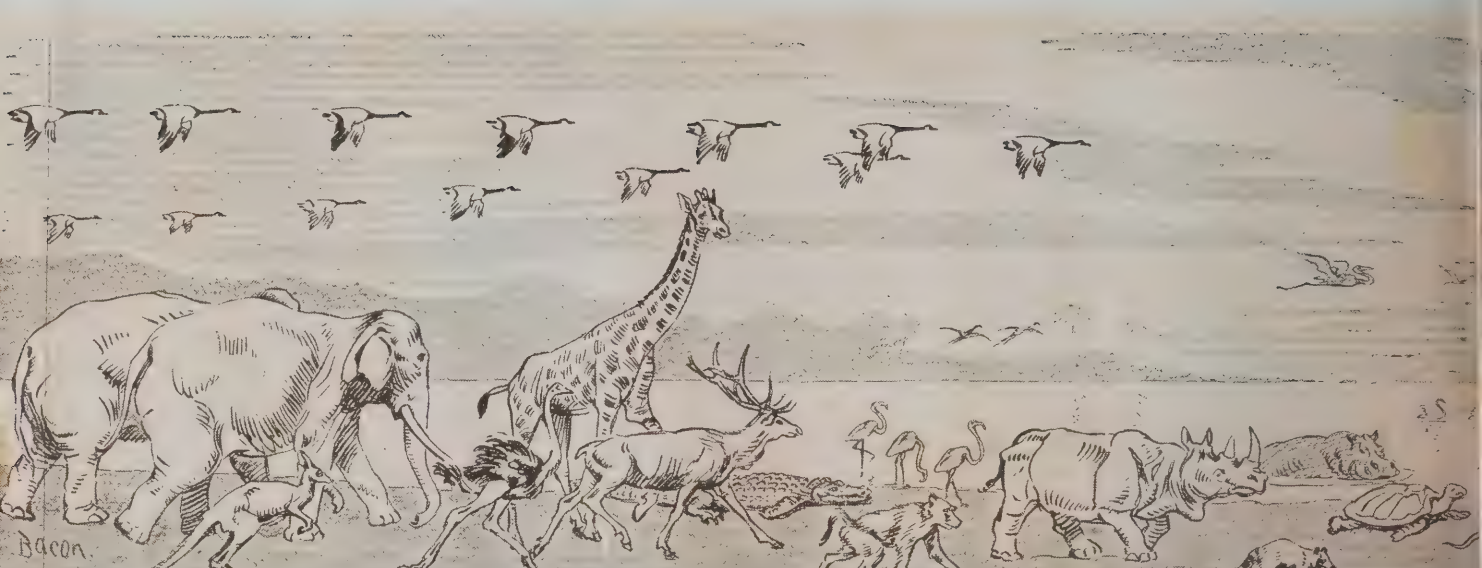
'Your first novel will be your last novel,' the editor said, 'unless you get out of the Village.'



What Becomes of the
When T

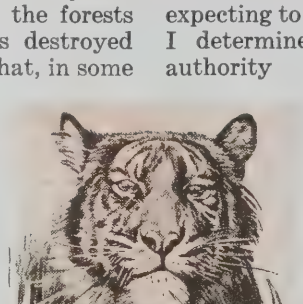
By HUGH A. ST

THERE is a legend among the natives of Central Africa that somewhere at the 'back of beyond' there is a land of lost elephants. The black hunter as he explores farther afield than his fellows is always expecting to chance upon it, and to secure untold wealth for himself and his whole *kraal*. The origin of the legend is not far to seek, for no native has ever been able to explain to himself where the elephants go when they die. He never finds them dead in the forests unless some human hand has destroyed them, and so he has assumed that, in some mysterious way, they, sooner or later, take the road to the lost land where they live forever and ever, or die in peace.

Now, while it was not this legend which set me asking the question which forms the caption to this article, it illustrates very clearly the difficulty of answering it. I remember the query first came to me many years ago in England. In those days, I loved nothing better than to go out with rod or gun and take what wood and stream and field would give me. The part of the country where I was living was well supplied with game, and returning, maybe in the dusk of a summer evening with my bag,' I remember again and again asking myself what became of all these animals when they died in the ordinary course of nature.

I asked many persons, I remember, just that question, farmers and gamekeepers and other people who might be expected to know, but I never got a satisfactory answer. They would tell me that rabbits, for instance, probably died in their burrows, and yet in the next breath would tell me, what indeed everyone knows, that a wounded rabbit having run to ground will come out of its burrow to die.

Well, for many years I went about asking this question in various parts of the world, never receiving any answer that satisfied me, and so, a few months ago, I decided to make more serious inquiry into the matter, and, rather doubtful, half-expecting to be shown up for an ignoramus, I determined to apply to the highest authority I knew, namely, David Starr Jordan, president emeritus of Stanford University. I wrote Dr. Jordan the following letter:



Dear Dr. Jordan:

For many years past I have been contemplating the writing of an article on a subject upon which I would greatly value your views. The title of my article would be something like this, 'What Becomes of the World's Wild Animals When They Die.' Perhaps the best way of putting you in possession of my idea would be to state a concrete case.

San Francisco Bay is famous for its seagulls. Hundreds and thousands of them are to be seen following the ferries and flying over its waters. I do not know what the average life of a seagull is, but no matter what it is, if the mortality among seagulls is anything equal to that among human beings the waters of San Francisco Bay or its shores ought to be daily strewn with dead seagulls. Yet, in all my excursions about the Bay region I have never yet seen a dead seagull that had not been shot or otherwise destroyed by some humanly occasioned mischance.

Take another case, the sparrows of London are equally notorious, hundreds and thousands are to be seen in almost every street. If the mortality amongst sparrows were equal to the mortality amongst human beings, there really would have to be a special scavenging department to remove the dead sparrows. Yet, the finding of a dead sparrow choking a gutter pipe or lying in the street is so exceptional as to occasion comment.

Now, I have asked this question of many people in all parts of the world, always with the same result. They could not answer it or had never thought of it before. Occasionally, I have had people point to the fact that they had quite frequently come across dead wild animals, but they were obliged to agree that where they had found one, they ought to have found hundreds.

I discussed this whole question with a friend of mine a short time ago, and the other day he told me that he in turn had put the question to an old Californian rancher, who had lived sixty years in the wilds. My friend's experience was the same as mine. The old rancher confessed that he had never seen a dead wild animal that had died a natural death. And, he went on to recall how some sixty years ago at his father's ranch in the Sierra foothills, hundreds and thousands of elk used to come down at a certain season of the year from the mountains to shed their horns. The woods, he said, were full of them, yet, he had never in all his experience seen a dead elk.

I should be greatly interested to learn your views on the matter. I am sending copies of this letter to some others who, I think, would be likely to have given the matter some thought. When I have received a sufficient number of answers I am hoping to get down to the matter and deal with it comprehensively, that is, as comprehensively as I can from a purely layman's point of view, for I am not a skilled naturalist or trained in that direction from a scientific point of view.

By return mail came Dr. Jordan's reply. It at once set my doubts at rest as to whether my inquiry should be taken seriously. Dr. Jordan, I found, was no more enlightened than I. He wrote:

Dear Mr. Kennedy:

I have myself often wondered what becomes of the birds and animals when they die

orld's Wild Animals
Y DIE?

DERT KENNEDY

n natural death, as so many of them theoretcally must. Perhaps none of them live long enough to die a natural death, for, as Mr. Seton says, 'The life of every wild animal is a tragedy.'

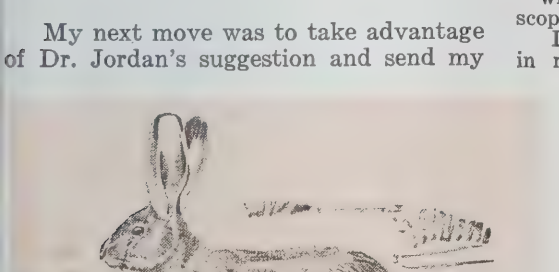
I have wondered even what becomes of fishes. We find the skeleton fossils in the rocks, but we do not find them dead on the beach or on the sea bottoms, excepting where they have been thrown out dead from nets. I have never seen a dead seagull, or any other sea bird that had died a natural death, though I find a good many sea bird skeletons in the Miocene rocks of Santa Barbara County.

Some of these men like Ernest Thompson Seton ought to be able to help you out. I fear that I cannot.

Very truly yours,
David Starr Jordan.

I have placed your letter in the hands of Professor Snyder, our best authority in bird life here. Dr. Joseph Grinnell at Berkeley is the best in the state.

My next move was to take advantage of Dr. Jordan's suggestion and send my inquiry to Dr. Joseph Grinnell of the University of California. Meanwhile, I could feel that my view of the matter was changing. The fact that the question was an entirely unanswered one to a man like Dr. Jordan caused me to wonder how it was that the matter had never been made a subject of exhaustive scientific inquiry. I knew that if such inquiry ever had been made Dr. Jordan would be familiar with it and its results, but apparently nothing had been done.



I was to get considerable light on the reason for this from Dr. Grinnell's reply. Writing from the Museum of Vertebrate Zoölogy, Dr. Grinnell said:

Dear Sir:

As to the question 'What becomes of wild animals when they die?' I should say there is no mystery whatsoever. The remains are *eaten up* by living animals. The world of carnivora is peopled to the limit of food supply continually, just as is the world of plant feeders. When any animal becomes decrepit even, it is likely to be pounced upon and its immediate demise is consummated. The remains are quickly engulfed, not necessarily only by being eaten by large animals, but through decay —which is a process of being eaten by microscopic organisms.

In my trips afield, I find no difficulty in recognizing the disappearing remains of numerous birds. It happens that just this morning a Plain Titmouse which has been singing around the Museum building came to grief. It is lying dead on a roof opposite my window, but doubtless it won't lie there long—with so many Blue Jays snooping about.

As bearing further upon your query I would call your attention to the inclosed reprint of an article of mine. Your main question is dealt with in the marked paragraph.

Very truly yours,
J. Grinnell.

Well, at first glance this would all appear to be plausible enough. But the question had been too long with me t enable me to accept such an answer for moment. To me Dr. Grinnell's lette simply bristled with inconclusive state ments. Supported, as I was, with D Jordan's frank admission that he coul not answer the question any more than could, the explanation afforded by D Grinnell was altogether too simple to satisfy reasonable doubt. And so I determined to grapple with the matter once again, and to invite Dr. Grinnell to a further consideration. The following is my answer to his letter:

Dear Dr. Grinnell:

Many thanks for your letter of the 6t It contained many helpful suggestions, but am wondering if I might trespass still further o your kindness. The fact is that the answe that you gave me is one that I have ofte received in the course of my questionin through several years, and the reason why am instituting this 'more intensive campaig is because I feel that it is inadequate.

You say that there is no mystery attachin to the disposal of wild animals. Now, grante that this is the case, is it not strange that one's journeys about the woods and wi places, which often lead into entirely untrodde paths, one should practically never come acro a wild animal in the process of being consume I know that one does occasionally con across such remains, but the wonder is th one does not come across them regularly and large numbers. Your explanation does n seem to me to account for the observations the old California rancher, referred to in m first letter, who, in the old days when the woo were full of elk, admitted that he had nev come across an elk that had died a natur death.

Even more difficult for me is it to accoun on the basis of your explanation, for the di posal of London's sparrows and pigeons, San Francisco's seagulls. If the mortali amongst London's sparrows were equal to th amongst human beings, hundreds and tho sands should die annually. What is the bi of prey that disposes of London's sparrow More difficult still is it to account for Londo

pigeons or New York's pigeons for that matter. In London, as you doubtless know, they swarm everywhere. Public buildings are protected against their nesting; veritable clouds of them are at times to be seen circling over the city streets. The question arises, What is the bird of prey which disposes of the London pigeon, and that so rapidly and completely as never to leave

any evidence of destruction—not even the feathers?

Now, I know perfectly well dead pigeons are found, as is also evidence of destruction. But such evidence to be truly indicative of any regular system of disposal should, to my thinking, be incalculably greater than it is. As to the disposal of dead wild life by the natural process of decay this seems only to increase my difficulty. We all know how long it takes for a dead animal to disappear through the natural process of decay. You will see a dead cow lie out on the desert for months and months before the carcass disappears, and even then the skeleton remains.

I read your interesting article on the comparative safety of sea birds, and again the difficulty seems to be increased. If the seagull has so few enemies, and its life is so comparatively safe, what does happen to the dead seagulls? And is it not a fact that if the process of mortality is anything like that among human beings they ought to strew the waters. Yet, Dr. Jordan in his letter to me, writes: 'I have never seen a dead seagull or any other dead sea bird that died a natural death.'

Forgive this inordinately long letter, but I should so much like to discuss the matter thus further with you.

Meanwhile, I had sent the same inquiry to Charles H. Kellogg, the well-known student of birds and beasts of the forest, who lives many months of every year in the open and has a capacity for friendship with wild life which few human beings attain. His reply, written characteristically on the back of a folder, 'En route to Los Angeles,' reads:

Dear Mr. Kennedy:

It's the same question and problem as, which came first the hen or the egg. Man as yet cannot answer.

You will find all naturalists tally with you in your observations but as to conclusions—??

Sincerely yours,
Charles Kellogg.

This reply from Mr. Kellogg fortified me to receive, as I did next day, a further letter from Dr. Grinnell. Dr. Grinnell returned to the attack with vigor. He would not depart for one instant from his first position.

My dear Sir:

I have your further communication of the 11th, reasserting your failure to understand what becomes of the remains of various birds that die. In my turn, I must reiterate my own conclusion that there is no difficulty whatsoever in accounting for the disappearance of animal remains.

It must certainly be the experience of those, as in the case of myself, who are in the field closely observing natural phenomena day in and day out for weeks at a time, that remains of defunct animals *are very frequently* encountered. Remember that there are 365 days in the year, that the mean population in bird life throughout our territory does not probably reach a figure above six individuals per acre. The mean rate of reproduction per year is probably under 300 per cent. That would mean a maximum of a dozen dead bodies per year to be accounted for on one acre; and that would be one every 30 days!

As for London, I am unfortunately not familiar with the conditions there. But if Londoners are as careful in their street sweeping as, say, obtains in Berkeley, there is not much show for an English sparrow or even a pigeon remaining in plain view very long.

Very truly yours,
Joseph Grinnell.

Well, as I read this letter, I had it in me again and again to controvert statements it contained. The dozen dead birds per year, per acre, working out at one every thirty days, did seem plausible enough until I recalled the fact that birds, like humans, do not spread themselves over the earth's surface like so many sown potatoes, one to an acre, but that over stretches of hundreds of square miles there might be few or none, while in some small favorable locality there might be tens of thousands. Then again, it is not only a matter of birds, but of millions of other wild animals. Even on the sown potato principle, Dr. Grinnell's acre should have many more silent occupants every month than one dead bird.

Then the point about the scavengers, even in Berkeley, one might reasonably expect that a bird would occasionally fall to the ground just after the excellent scavengers had passed that way, and so 'remain in plain view' at least twenty-four hours. I did not, however, write to Dr. Grinnell any further on the matter but instead sent my letter of inquiry to Luther Burbank. By return mail there came this reply:

Dear Sir:

I am as much in the dark about the question which you ask as you are, to say the least, probably more so. So am unable to help you in any way, much as I would desire to do so.

Respectfully yours,
Luther Burbank.

That seemed to me to be enough.

Imposition of Books

(*Continued from page 8*)

and it is we who certify the others in their gift.

Some people should never read aloud, except as penance and for the mortification of their pride. I have in mind a minister—indeed, many ministers, for they have the lordliest reading of all to do, and not one in a thousand is fit for it. This particular minister, however, is a literary man and reads his own compositions beautifully. He sets such great store by his sermons that I am sure he studies how to read them well. But when it comes to what he calls the Word of God he mouths it, makes it 'preliminary' to his own performance, and could be shamed in his reading by any schoolboy. He does not accord Isaiah or Luke the ordinary courtesy due to masterful men of letters. But how Richard G. Moulton, professor of literature in English in the University of Chicago, would read the Prophets and the Evangelists and reverently repeat without intonation the words attributed to God! If I were a millionaire and could find another Moulton, I would found a church in the center of the great city, and there should be Reading only, and the multitudes would hear. Not so drastic a proposal as it seems; Mrs. Eddy tried it with some success.

That is why I am conscious of some mental reservations when Bible reading in schools is proposed. We know, of course, what the proponents mean and all the good they intend to accomplish. But if I were in league with Satan and could choose the readers, I could make the Bible a stench in the nostrils of the whole younger generation merely by having it read by those who do not belong to the guild of Readers. It could be done.

There is a modern novelist who changes his mistresses every year. In doing so, he acts consistently upon a philosophy of life which he has formulated. He is competent, no doubt, to write upon life as he lives it, but he does not do that; he writes about life as you and I live it, and I doubt his authority to carry on in that direction. If he wrote of life as *he* lives it, only bootlegging publishers would have anything to do with him. So he takes the philosophic essence of his own miserable and unhappy life, and injects it into pretended stories about us.

Books have no more right to be impostors than individual persons have.

The imposition of books can be avoided by keeping them in their place, by reversing the positions readers and books usually assume toward each other. If I say to a book, 'Entertain me,' I set it upon the stage and I sit at its feet. If I say to it, 'Paint me a picture' or 'Show me what manner of person this great one was,' I set it up, and sit at its feet. It is Authority and I am the humble listener.

With all but a few books, it is wise to reverse this arrangement. Let the book sit at your feet and sue for your judgment and favor. Emancipate yourself from the delusion that print has a infallible quality. Outside an authentic record of experience or the report of some true work of research, there are few books which we should not place at the Bar while we, the readers, ascend the bench. That is criticism, an art in which they say America is deficient.

Ellen Glasgow and 'Barren Ground'

(*Continued from page 3*)

'I am pleased to hear that,' said Miss asgow, 'for it is a story that I have had my mind at least ten years, and it took e three years to write it. I made no conssions to popularity and I have been a tle surprised myself at its wide appeal, it is long and serious and it is not a love ry. I wrote things honestly as I knew em to be.'

HEN I expressed a little of my belderment that from an environment like is should come a story of the soil, so listic that it seems as if it must have been part of the writer's experience.

'In a way it is,' agreed Miss Glasgow. y father had a place in Louisa County ere I spent a good deal of time as a child. ose days among the farmers are among most vivid of my life. I felt their uggles if I could not wholly understand m.' The brown eyes had lost their aming and grew soft and tender as she ntinued, 'I was also around with the ored people in their cabins and I learned ir sorrows. I think that I never was ant for the city, there seems such a ong feeling for the country in my blood.'

'And doubtless a heritage of love for rginia and her history, too?'

'Yes. My people settled here before the volution and this has always been our me. They were country people, as all rginia planters were.'

In Richmond it is as if the War of the bellion were fought yesterday. Sometes it seems the burning question of the y about which dispatches may be exted hourly. It is impossible to be in the y without feeling the spell, and before I alized it I was asking,

'And did your people suffer in the vil War?'

'My father had just graduated from ashington College, now Washington and e University, and was connected with the edegar Iron Works. He was among the st to volunteer for the Confederate Army, t General Jackson wished him to remain were he was in order to help get the munition out. The ore came from the lley of Virginia and as the Federals adnced the works were pushed farther and ther into the woods. My mother, with of her children, was in Richmond duran part of the siege and some of the time was in the country with her people. we in the South know what war means.'

Somehow I felt a touch of embarrassnt and hastened to turn the conversaon into more commonplace channels.

'And did you go to school in Richmond?'

HE brown eyes took on a new gleam of rriment. 'I don't suppose that I went to ool two whole years in my life. They ted me off when I was eight. I remember October morning well. I was dressed in k with a white bonnet and I had a lunch with beaten biscuits and sponge cake. was the lunch box that tempted me. ey set me down at a bench and I was tented enough until a class of older girls ae thundering through the room. Then ed, leaving lunch box and all behind.

'They did not try me again until the t year and then with no great success.'

'When did you first write for publication?'

'My first short story appeared when I was fifteen. I commenced my first novel, *The Descendant*, at eighteen. Then I had trouble and laid it aside. When I was twenty-two it was published by Harpers.'

I expressed my admiration for Miss Glasgow's heroines who, with each succeeding novel, grow out of the 'sheltered' type which I had associated with the South.

'After the war,' replied Miss Glasgow briefly, 'our women worked. They had to support themselves and perhaps their children.'

Since *The Descendant* Miss Glasgow has written fourteen novels, most of them dealing with life in the South, and forming a panorama not of a chivalrous maze, but of a land where stern battles are fought and won. In *Virginia* we find, it is true, the 'sheltered' girl, brought up in a household where the mother scrubs the floors before the daylight lest any one see her doing manual labor, and where the watchword is, 'Virginia must be spared,' but when girlish charm is gone the 'sheltered' type becomes a bore. *The Battle Ground* shows Virginia of the Civil War, and *The Miller of Old Church* presents a group of rural humorists by no means unworthy of George Eliot.

IN *Barren Ground* we see the romance of work when love has been found insufficient for life. The unswerving realism of the story, together with its spiritual truth, makes it a notable addition to our literature, thoroughly American in characterization and ideals.

I remarked that I enjoyed Dan and Beersheba, and instantly the expressive eyes grew soft and tender.

'I felt as if I knew those horses,' said Miss Glasgow, 'and I loved them. Animals in the South sometimes have a hard time of it. This year, especially, with the drought, the farmers do not have sufficient fodder. I am president of the Society for the Prevention of Cruelty to Animals here in Richmond and we have just established a shelter where we can take care of stray dogs and frequently find homes for them, but we can't do much for horses except buy a few unfit for service and destroy them. It is slow work; there is so much indifference to animals.'

I suggested that Richmond with its literary traditions and its present coterie of writers must be a delightful place in which to work.

'It is,' agreed Miss Glasgow. 'I like its quiet, and they say that now it is one of our few Anglo-Saxon cities. I am often in New York but the psychological atmosphere of rush troubles me. I love Richmond and I know its problems. I like to help in such a charity as the Afro-American Home for the Aged. I like to attend service there and hear the old-type Negroes of my girlhood sing in their quavering but melodious voices. Naturally I lead a busy life, work in the morning, golf in the afternoon if the weather permits, and we Southerners like to entertain.

'True, it is lonely in my big house. I was next to the youngest of eight children and now I have one sister who lives in Philadelphia and a brother who lives in London. But this is my home and I could not bear to change.'

No More Razor Blades To Buy!

Amazing New Invention Guarantees You 365 Slick Shaves a Year—Makes Old Blades Keener Than New!

KRISS-KROSS marks such a radical advance in new shaving comfort and economy that it deserves to be called much more than a stropper. Rather it is a super-stropper—a blade rejuvenator! Almost literally, it makes a new blade out of an old one every day and makes hundreds of keen, quick shaves blossom where only one grew before!

KRISS-KROSS strops your blade (any make) on the diagonal just like a master barber. Eight "lucky leather grooves" do the trick in 11 seconds. Automatic flip-flop action. Pressure decreases automatically every stroke. Nickle jig flies up to notify you when your blade is ready with the *keenest cutting edge that steel can take!*

Unusual Offer

Right now—to introduce KRISS-KROSS stropper, I will give you a surprising new kind of razor without extra charge. Really 3 razors in one. Instantly adjustable to any shaving position. A flip of the finger makes it (1) T-shape; (2) straight (old style) or (3) diagonal (new way). Gives a *sliding* instead of *pulling* stroke. Simply zips through the toughest crop of whiskers. Made of *rustless* metal. Comes with 5 special-process blades and is entirely unlike anything you ever saw before.

Get Details!

This astonishing offer is limited. Send the coupon for information on amazing KRISS-KROSS inventions today. They are sold only through authorized representatives—(or direct from the factory)—and are even more remarkable than I can tell you here. Clip the coupon today for full details. No obligation.

AGENTS!

Make big money as KRISS-KROSS representative. J.C. Kellogg made $200 in 7 days, H. King earned $66 in one day.

Spare-time workers, office and factory men make $5-$10 extra a day just showing KRISS-KROSS to friends. Wonderful new 'Permanent Income Plan.' Check bottom of coupon and mail at once!

Lucy Percy, the Countess of Carlisle

(*Continued from page 13*)

Lady Carlisle turned her active mentality to the study of systems of government, to intriguing in state affairs, and obtained, through her wit and beauty, a powerful influence. Her political activities, it was said, were not built upon any fixed principle; she wished, only, to be active! She seems to have been feared, rather than understood—in fact, she could hardly understand herself.

Lady Carlisle's outstanding political activities were the bringing about of Lord Holland's abandonment of Charles at York in 1641: in engaging in negotiations between the Prince of Wales and the City, giving the Prince advice as to his conduct toward the leading men; and in sending secret messages to the Prince when he blocked the Thames. She pawned a pearl necklace, Clarendon says, 'for £1,500, which she totally disbursed in supplies and making other provision for the expedition for the Earl of Holland.'

For these and other intrigues, she was arrested and committed to the Tower, where she had been with her father, and where she remained, this time, for eighteen months.

While staying at Leicester House, London, with her sister, Lady Leicester who had just lost 'a sweet little boy,' she was suddenly arrested by Colonel Harrison, who, Lord Leicester indigantly remarked, entered the house, read his warrant and made her prisoner, without allowing her to speak to her sister.

John Evelyn writes to Sir Richard Browne:

They have confined and examined the Lady Carlisle, upon which there is now a strong guard. Some are not ashamed to say that they mean to put her to death; others that her honourable brother shall assure them that she shall no more play the stateswoman.

Through the influence of powerful friends she was released.

It was, undoubtedly, Lady Carlisle who notified Pym of Charles' intention to arrest for treason the five popular members of Parliament, and thereby saved them. Evelyn notes in his *Diary*: 'I shall not forget the kindness of that great lady, the Lady Carlisle, that gave them timely notice.'

At the Restoration she was received at Court and continued to intrigue, this time for the return of Henrietta to England. She was opposed by Clarendon who could not brook the political 'interference' of any woman, least of all a woman like Lady Carlisle, and yet he always mentions her favorably.

Lodge says that, strangely enough, poets wrote almost wholly of her personal charms, seldom mentioning her mental powers or her virtues. This, he thinks, is nothing against her moral character, and that while she had enemies, as a great woman is bound to have, no one except Sir Philip Warwick has spoken directly against her conduct, and this he had done quite freely. He refers to her as:

That busy stateswoman, the Countess of Carlisle, who has now changed her gallant from Strafford to Pym, and has become such a she-saint that she frequented their sermons and took notes.

Waller, the poet who celebrated the charms of Lady Dorothy Sidney, writes of that lady's aunt:

To The Beauty of My Lady Carlisle.

Your beauty next our solitude invades
And warms us, shining through the thickets shades . . .
Carlisle! a name which on the bark is wrought
Of every tree that's worthy of the wound.
From Phoebus' rage our shadows and our streams
May guard us better than from Carlisle's beams.

Sir Toby Matthew, the Elbert Hubbard of the reigns of James and Charles, wrote a panegyric of her shortly before she passed away in 1660. The dedication was by the notable Dr. Donne, who could, even for those days, lay it on thick:

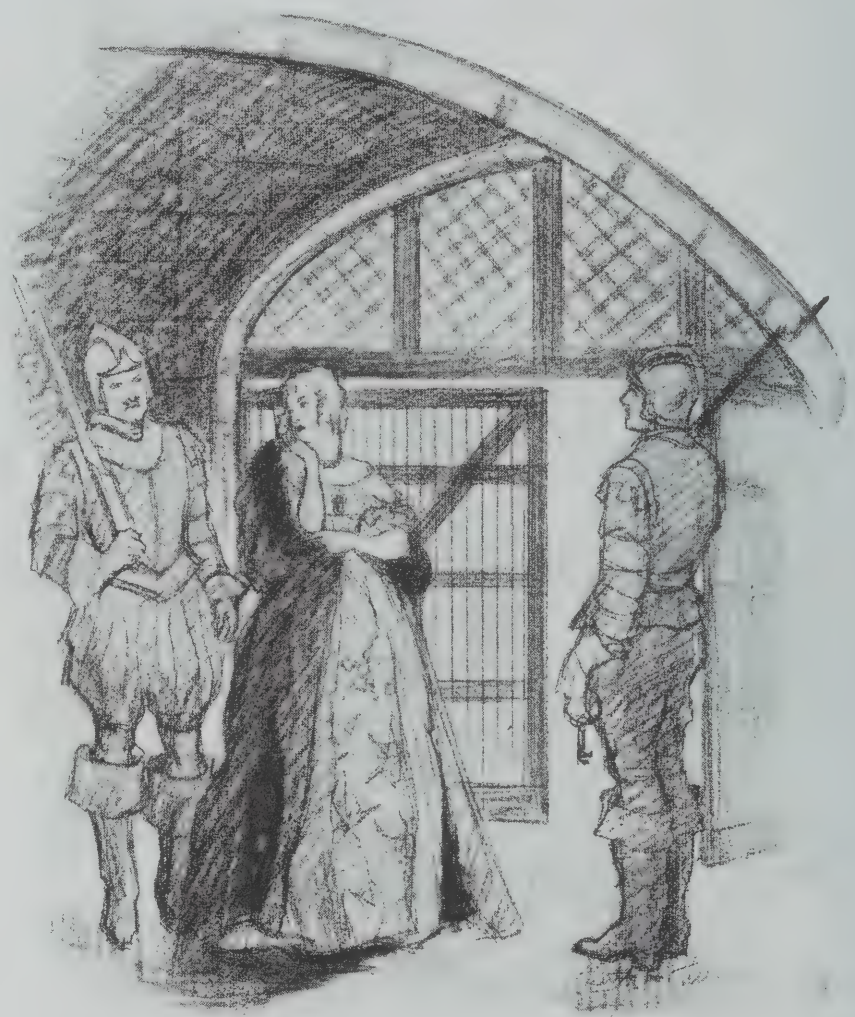
But Madam, that which concerns us more than all this is a hope that . . . we were to hear that your Ladyship were to favour us with many years to come with your presence here, whose absence would make such a chasm in our Galaxy that it would grieve us less to see all our saints ascend into the heavens, than that the earth should lose so much of her splendor, beauty and goodness.

Among the more intelligible passages of Sir Toby's panegyric are these:

. . . She more willingly allows of the conversations of men than of women; yet, when she is among her own sex, her discourse is of fashions and dressings, which she hath ever so perfect upon herself as she likewise teaches it by seeing her . . . She hath too great a heart to have naturally any strong inclination to others . . . She is too lofty and dignified to be capable of friendship and of having too great a heart to be susceptible of love . . . She hath a grace and facility, I might say a felicity, in her expressions, since they are certain and always in the fewest words.

The following lines may be the keynote to her character:

She is in disposition inclined to be cholerick, which she suppresses, not, perhaps, in consideration of the persons who occasion it, but in a belief that it is unhandsome toward herself . . . She affects



She was arrested and committed to the Tower, where she had been with her father.

extremes, because she cannot suffer any condition but of plenty and glory.

The sources from which we get the truest glimpses of Lady Carlisle are the letters of members of her family and her contemporaries. When Lord Lisle warned his wife of Lucy Percy's visit to Penhurst in 1617, and ended his letter with 'God protect you from all harm'; and when Lady Leicester, in later years, wrote, 'My sister is still here, and all the children well,' these are only unintentional interpolations and yet there are things that force us to believe this great lady was not a really sympathetic, loving woman. Lady Leicester, her sister, writes in cipher regarding political aspirations of her husband in which she refers to Strafford:

But I fear 154 (Lady Carlisle), who has more power with him than any living creature, will do nothing for our good. When you write to 142 assure yourself 154 (Lady Carlisle) will never fail to see it, and from thence it spreads all over England.

Lady Carlisle, unlike her niece, Dorothy Sidney who was so loyal and loving, seems to have had 'too great a heart to be susceptible of love' even for her own family, for her sister again writes:

I have no more cause to fear the ill offices of 154 (Lady Carlisle) than formerlye; for it is no new conceit, that she is not affectionate to me or mine.

As soon as she hears of her sister's recovery, she writes again, with much about Strafford in her letter, and asks a favor for him:

I was desired of my Lord Deputy to send some of your servants to bye him 2 beds, one of crimsone velvet, and the other of matched damask; the crimsone of silk fringe, and the other of gold and silver; but I, that dayr saye anything to you, will let you know that by giving this command to your servants you will do him a huge favour, . . . I have not been well this week, therefore excuse my strang writing. If you find anything new for a New year's Gift, send me word by the next; and let my Lady Spencer knowe that my indispositione keept me from writing to her.

Then comes Dorothy Osborne, that wide-awake, 17th Century young woman, who has a few words to say to William Temple, about the great Lady Carlisle, and, as usual, it is right to the point:

I should be pleased to see anything of my Lady Carlisle's writing, because she is so extraordinary a person. Pray tell me how you like her, and what fault you find in my Lady Carlisle's letter? Methinks the hand and the style both show her a great person, and 'tis writ in the way that's now affected by all that pretend to wit and good breeding; only I am a little scandalized to confess that she uses that word *faithfy* she that never knew how to be so in her life.

I have been told that I have too much franchise in my humour, and that it was a point of good breeding to disguise handsomely, but I answered . . . It was not to be expected that I should be exactly bred, that had never seen a Court since I was capable of anything. Yet I know so much —that my Lady Carlisle would take it very ill if you should let her not get the point of honour; 'tis all she aims at, to go beyond everybody in character. But are you not afraid of giving me a strong vanity with telling me that I write better than the most extraordinary person in the world?

One of the last entries in Lord Leicester's journal records the passing away of his sister-in-law, 'whose wiles had turned so many heads, who had plotted with every party in turn, and was still as active and lively as ever':

She had dined well, but about two hours after, was suddenly taken as she was cutting a piece of ribbon, and called for her chayre to go to the Court, where the Queen (Henrietta) then was, but, without ever speaking one word, she dyed about 5 or 6 o'clock. It may be observed that it was upon the 5th. of November, the day of the Powder Treason, for which her father was suspected and imprisoned. She was younger than my wife, by almost just as much time as she outlived her . . . aged 61 years and a little more than a month.

Today there are women like Lady Carlisle. We meet them, often. We pay tribute to their splendid minds, but we do not love them. Maybe they are not wholly indifferent to love. Maybe they are unable to make themselves known—to give forth their true essence. Far be it for us to judge human nature in the 17th Century—or in the 20th!

The Weiser Typhoon

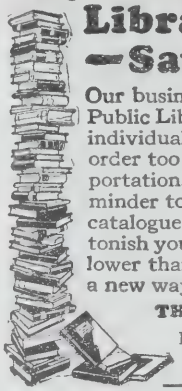
(*Continued from page 14*)

did so. Just 3,449 batsmen have swung at and missed a third throw or heard the third strike called by the umpire.

Nature fitted Johnson well for the skill he has displayed. He is tall, rangy, strong, and has exceptionally long arms. His pitching motion is the best the game has known. He has perfect rhythm. He delivers the ball in a wide, sweeping motion, side-arm, 'throwing it from third base.' This style of delivery, the perfect rhythm, enables Johnson to pitch with the least possible exertion. There is never an ounce of strength or energy wasted. Besides this physical ability he has perfect mental poise. He never becomes ruffled. He has always been the gentleman of the diamond, never offering an excuse, never complaining.

There are two classes of pitchers. One class depends on the stuff the ball carries to win games. These pitchers have so much on the ball that they can throw it past batters. The other class works on the batter, depends upon controlling the ball and putting it where the batsman does not care to have it. They depend on outguessing the batter. For years Johnson belonged to the former class. All he had to do was to get the ball over the plate. He had such dazzling speed that the batter found it impossible to strike, except on rare occasions. Then, when that terrific speed began to wane, Johnson developed a slow ball, a curve and a change of pace. He began mixing his delivery and working on the batter. He used his fast ball for variation; it was no longer his chief play. He continued a winning pitcher, and if the prediction of the astute Griffith holds true he will remain with the winners for seasons to come, and when he departs from the clubhouse a last time he will leave a record that a number of pitching generations can make their aim.

Buy Books Where Libraries Buy —Save Money



Our business is primarily with Public Libraries, but over 3,000 individuals buy from us. No order too small. We pay transportation. Tear this out as a reminder to send for our 52-page catalogue. The low prices will astonish you. From 40% to 60% lower than retail prices. Learn a new way to buy books.

Chaplain-in-Ordinary to a Film

(*Continued from page 2*)

own office and Miss Macpherson worked in hers, and if we saw them or had a short note from one of them the conference was brief.

I heard this illustrative story about Mr. De Mille while I was in Hollywood:

When the big religious picture, *The Ten Commandments* (which, by the way, was written by Miss Macpherson and of which Will Rogers says you can tell just where Moses stopped and Jeanie began), was being filmed, two of the leading characters had sat long in the De Mille outer office. Becoming impatient, finally, they sent into the sanctum sanctorum the message, 'Moses and Aaron want to see God.'

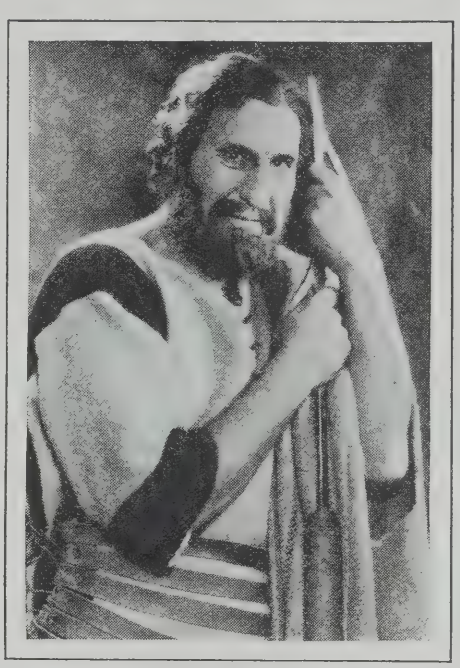
De Mille is indeed mighty in his establishment. He blows up bridges, scuttles ships, builds and destroys cities—sometimes in seven days—and his word appears to be law.

Frankly, I did not like the plot of *The King of Kings*. It has its root in a supposed love affair between Mary Magdalene and Judas Iscariot, and I protested against it at the start. It was the only suggestion I made which was not instantly accepted. To that one, however, Mr. De Mille and Miss Macpherson were adamant. They said: 'It is not possible to produce a great and successful film dealing with historic characters and not have a love-interest. Shall we give the plot this little touch of color, or shall we drop the matter once for all? It is folly to talk of making the movies non-commercial. Suppose by passing the hat you get money to produce a religious film on what you call a non-commercial basis; what theater will exhibit it? Who will see it? You must produce a film which a great many millions of people will pay real money to see or you may as well not produce it at all. We propose to keep all suggestion of sex-relationship far away from the Person of Jesus, but neither Judas nor Mary Magdalene will suffer much in reputation if we assume that the two had known each other before Judas became a disciple of Jesus. And that is what we do assume. That Mary Magdalene at first hates Jesus for taking her lover from her, and goes to hear Jesus that she may plot a revenge, but seeing and hearing Him is converted. Then Judas, finding he has lost her, turns against Jesus and betrays Him. Unhistorical? Certainly; but still well within the range of human motives, leaving us free to tell the story of Jesus truthfully except as the hatred of Judas has part of its explanation in this situation.'

Mr. De Mille was preparing to meet the bankers who were to finance this film. He showed me the cost-estimates, on a ruled sheet, showing the several reels and the probable cost of each scene. For each reel so much for wages, so much for costumes, so much for carpentry, and all the rest. He would need one and one-half millions of dollars at the very beginning. He said:

'I cannot get that money unless I can show a plan that will almost certainly return it. I must get back three millions of dollars before there is a cent of profit, for the expense of the theaters and the advertising and promotion must be met. And it must come promptly. No film lives long. I must produce a film that will gain immediate attention, be talked about, recommended, perhaps denounced, and one with qualities of genuine merit or the bankers will not lend the money, and if they do, the theaters will not produce the film, and if they do the audience will walk out. Talk as much as you will about the non-commercial aspects of the business. They interest me. But there will be no film unless I can see and show the bankers and the managers three millions in quick money.'

I tell this partly as an alibi for myself and partly in justice to the producer. It is possible that when *The King of Kings* appears some friend of mine will ask in-



Simon called Peter.

dignantly, 'Did you approve of that film with the love-story of Judas and Mary?' And I shall say, 'No, I did not approve, but I understand a little better than I did why it had to be.'

Apart from this, every suggestion made by Bruce or by myself was promptly accepted. Bruce's study covered the whole plan of the performance. I was called to decide special questions.

'We have too many scenes. There are certain pairs between which we must choose. Shall we cut out the Raising of Lazarus, or the Feeding of the Five Thousand?'

I studied the manuscript and replied, 'Cut out the Raising of Lazarus. Reasons: First, it is recorded by only one of the evangelists, whereas the Feeding of the Five Thousand is the one miracle, aside from the Resurrection of Jesus, that is recorded by all four; secondly, the Raising of Lazarus comes late in the ministry of Jesus and has its larger duplication in the Resurrection of Jesus Himself; thirdly, the Feeding of the Five Thousand is your best chance in this film to show a crowd.'

So that was done, and a place was selected on the shore of Catalina Island where a bay about the width of the Sea of Galilee might do service for a Galilean setting for that event.

'What kind of coin did Peter take out of the fish's mouth? Was it of Palestinian or Roman coinage? What did it look like?'

Questions like this, of course, were easy, and the 'Research Department' was found to possess in its reference library, under care of an intelligent woman, all the books that I required to show the exact character of the coinage. A mold was then made and a coin cast and submitted for my inspection. I learned that the most meticulous care was taken to be exact. I failed to see that this was necessary since the audience could not possibly see the lettering on the coin, but I was told that there might be a close-up showing the very coin, and any way, they wanted it exact.

The street scenes were building with very careful measurements. The house of Mary Magdalene in her days before saint-hood was shown with abundance of gold-leaf decoration. I asked, 'Would not bronze paint have answered?' No, it would not have answered. Genuine gold leaf, exactly like that on the dome of the Boston State House was used, and plenty of it.

I was glad to be asked to inspect the costumes. I objected to the expensive breastplate of the high priest, and directed that the hooks and rings that supported it be reversed. 'We are well paid for bringing you here,' said Mr. De Mille. 'If we had shown that scene one night and a Jewish rabbi had told us it was wrong, we should have had to reassemble the cast and do that scene over. You have saved us $60,000.'

I had not supposed that such a detail would greatly have mattered.

On the other hand, these motion picture producers take great liberties. They were building a beautiful model of the temple, a work of exquisite art. They consulted me about it in terms of quarter-inches, and I did not see that it mattered, but gave the data correctly. My measurements instantly became the official measurements.

After this was all arranged, and properly, the question rose, 'Might one of the tables of the money-changers, through a special pull or bribe, have been at the top of this little flight of stairs leading to the inner court?'

'It is not impossible,' I answered, 'but it is highly improbable. Why should you care?'

'Because a table would look well falling down those stairs, and the money scattering everywhere. It will be much more effective than on a level.'

Said I, 'You are the greatest of all living strainers of gnats and swallowers of camels.'

'True,' said Mr. De Mille, 'but we have just about fifteen seconds in which to make the impression of the cleansing of the temple on several millions of people, and any little dramatic touch that does not offend propriety or deny the truth of history is extremely valuable. If you say that the table could not possibly have been there,

we will not put it there, but if you say it is not impossible, then we have that much more of vividness to add to the picture.'

'Put it there,' said I. And it was put.

Bruce and I were asked for advice in the selection of some of the characters. Bruce and Esther helped select Jacqueline Logan as Mary Magdalene. She was very happy to be chosen. She wanted to talk with me as to the interpretation of her part in the two very different aspects of her career. I helped to select a number of the leading players. I was interested in seeing how it was done.

Each afternoon, rather toward the end of the day, a half-dozen of us would sit in a rather long, narrow room, not much wider than a Pullman car. On the floor were perhaps a dozen chairs, and in the back row were three chairs. I occupied the middle one. Miss Macpherson sat at my left. At my right sat Mr. De Mille with a one-piece telephone set in his left hand and on his right a dozen buttons. He pressed buttons and talked to a stenographer in another room, to cameramen, somewhere afar, to the research department and I know not what else. When he sits at those buttons many people sit up and take notice of what he says. A projection screen at the other end of the room showed the day's tests of different characters. We had, let us say, two or three brand new 'tests' of Jacqueline Logan, depicting her expressions and attitudes. We saw her variously draped, and as much of her undraped as would appear in a one-piece bathing suit. Mr. De Mille would say, 'Try another test of reel two,' or something like that. Jacqueline Logan had days and days of doing nothing but dressing and posing and being tested till her feet must have ached.

AND we saw films of other and lesser characters. I was interested in hearing Mr. De Mille ask, 'Is that a hundred-dollar test?'

I wanted to know about a hundred-dollar test. It is like this. You think you are fitted to be a movie star, and you want a job at Hollywood. If you have no sense you will go there and stay till your money gives out and then wire for money to come home, not having gone beyond a single gate. But if you are sensible you will take a hundred dollars and a satchel full of clothes, and perhaps a friend of the opposite sex, and go to any motion picture studio near your home, and they will sell you a hundred dollars' worth of film. Moreover, they will advise you as to draping and undraping, and movement and expression. If you are a woman you will need a man in certain parts of your test. You may take a man with you, or the studio will rent you one at so much an hour, and he will pose with you and let you embrace and kiss him to show how you can perform that part of your duty. Then you watch the announcements of pictures that are to be made, and you write or wire the producer that you think you are the right person for such and such a part, and that you have a nice new hundred-dollar test. If he asks to see the test, you will ship that by express, and the producer will have a proper subordinate run it through, and if it seems satisfactory, the producer himself will see it and tell whether it will justify your taking another test for this particular part. And if that test is what he wants he will invite you to Hollywood.

Mr. De Mille offered me the privilege of having a hundred-dollar test of myself, free, and Miss Logan and Miss Macpherson offered to pose with me if I needed their assistance. But I am not yet a movie star. I did, however, pose for a 'still' of Jeanie Macpherson and myself. That is the one on which she wrote what I have already quoted.

In all this work our opinions, Bruce's and mine, were received with utmost courtesy and carried all the weight we could have wished. I could almost say that they carried more weight than I wished. On one occasion I wished they carried less.

It was this way: Mr. De Mille was considering the advisability of having in some interlude or at some banquet of Pilate or Herod a dance of slave girls. Such a dance was posed and submitted to us. Two girls, each in a white close-fitting garment, and powdered white as to hair and flesh, moved in a graceful dance. It was like two nude statues moving, not at all indecent nor suggestive, but it did not seem to me quite in character. I said, 'I don't believe you want that dance.' Instantly Mr. De Mille said into his telephone, 'Cut out that slave dance.'

NEXT day as I moved around the lot I saw one of those two girls. She had got herself up in inexpensive white. Her shoes were white, and I judged had cost about $1.49. Her stockings were white and of cotton. Her dress was white and homemade. Her hat was white and cheap. She was powdered white. And she looked very happy. She thought she had landed a job. I looked her over, and reflected.

'That girl and the mother who made that dress need the money she is expecting to receive and I have taken away the bread and butter she was just about to earn. That dance was not morally objectionable. I have more influence here than I want.'

So I took pains to say to Mr. De Mille that it was barely possible that dance might deserve to be reconsidered. I do not know what came of it.

I saw the dressmakers designing the garments for the principal characters. The velvet is rich velvet and the silk is real silk and the leopard's skin is real leopard's skin.

'Would not a cheaper fabric have answered the purpose?' I inquired.

'No; the expense of making it would be the same, and the difference in cost of material is not enough to justify it. Moreover, it holds the actors to a certain level of self-respect and the genuineness and reality which we aim to produce.'

So they strained out their gnats, and as I have said, when mechanical or artistic requirements became the issue, they swallowed camels without choking. Not to save money, however. Always it was some effect of lighting, some possibility of dramatic action, that determined the change.

One day Mr. De Mille summoned all the characters who had been selected, the mechanics, the cameramen and the others, and made them a little speech. It was a sermon, but he did not ask me to deliver it. He did not say, 'We are investing a million and a half in this enterprise, and if one of you is careless or late and we have to delay work or shoot a scene over it will cost us thousands.' He said something like this:

'We are starting the greatest religious picture ever filmed. We are breaking loose from the tradition that the Christ must not be shown in the movies, and that His presence must be suggested by a shadow or a hand or by the direction in which the people look. We are showing the Christ Himself, and the people grouped about Him. We intend that this film shall be a religious lesson to America and the world. I want every man who drives a nail or mixes a hod of mortar to do it in a religious spirit. I am counting on you to keep out of the atmosphere of this picture a single profane or coarse word, and to approach this task in a spirit that shall carry a feeling of reverence to the millions who are to see the film.'

That was the way he talked. And I am bound to say that I did not catch any false note in what he said. I am not unaware that these people live and move and have their being in a world of unreality, and that they talk not very far from the press agent, but I think there were no reporters present when this little speech was made, and to me it sounded genuine.

When we returned from this gathering, Mr. De Mille and Bruce sat down and chatted about Bruce's book, *The Man Nobody Knows*. Said Mr. De Mille,

'Bruce, they will know Him when you and I are through.'

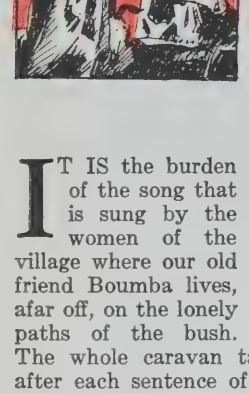
All that Mr. De Mille promised to pay me he paid, and all that I promised to do for him I have done. He has no knowledge that I am writing any such article as this, nor has he suggested a single word from me of this character. But I brought away an impression of a deeper religious spirit in this film than I had expected to discover.

SEVERAL other films were in progress on 'the lot.' One was a marine film, in which a British frigate and a Yankee clipper raced around the Horn for the coast of China. First two old ships had to be bought and reconditioned. Then a half-replica of the clipper had to be reproduced, the water side of her, lying at dock. Besides, two models, most skilfully wrought, had to be constructed. I saw these models and the half-ship at the dock. The models had this reason for being. There had to be a storm, and it would have been impossible to time an actual storm, to manage the ships and have a third ship equipped with cameras, to obtain certain results. The storm, therefore, occurs on an artificial pond on 'the lot.' On the shore are wind and wave machines, and vessels can be shown coming from any desired direction and with waves and winds of any desired violence. And no one can tell the real ship from the model employed.

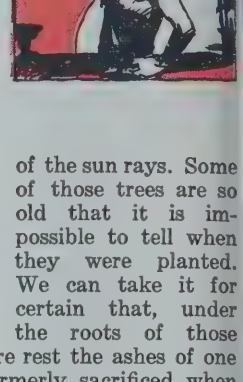
I was free to go anywhere I chose on 'the lot.' I saw a good deal in a few days. People came and went in costume appropriate to their parts. A man walked about in the sunlight, naked except for a breechcloth, getting a tan that he might be a chariot driver or something of the sort. No one paid the slightest attention to his attire. Nor was he permitted to get his tan out of a paint can. It must be honest-to-goodness tan.

I did not stop very long in any one place on the lot but I witnessed no act or attitude of impropriety and I heard no wrong word. Indeed, the people I met in Hollywood were pretty good people. I heard some things which incline me to believe that there are people there of other sorts, but I did not happen to meet them.

Market Day *in the* Heart *of* Africa



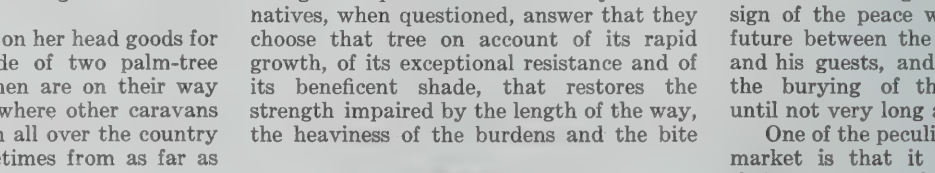
'Who Wants Rats? Palm Worms? Caterpillars *and* Broiled Grasshoppers?' Ask *the* Jungle Merchants



By HENRI GALLAND

Translated by ANDREE PRATOUCY

IT IS the burden of the song that is sung by the women of the village where our old friend Boumba lives, afar off, on the lonely paths of the bush. The whole caravan takes up the refrain after each sentence of the tale—a strange tale that relates the various events of a recent theft of manioc from a plantation by Mouvouandou, who is herself a member of the caravan, and who sings louder than any of the gay party.



Each singer carries on her head goods for sale in a basket made of two palm-tree branches. These women are on their way to the Nguia market where other caravans of women coming from all over the country will soon arrive, sometimes from as far as two days' walk.

Such markets—I mean such home-markets, which were even earlier than any European occupation—do not exist in all parts of tropical Africa. The first travelers to visit the West African Coast were struck by its unusual commercial activity, by the numerous and important markets existing there at that time. They pointed out the big slave markets of the Loanda country. Some of those markets are of such antiquity that it is practically impossible to fix even an approximate date.

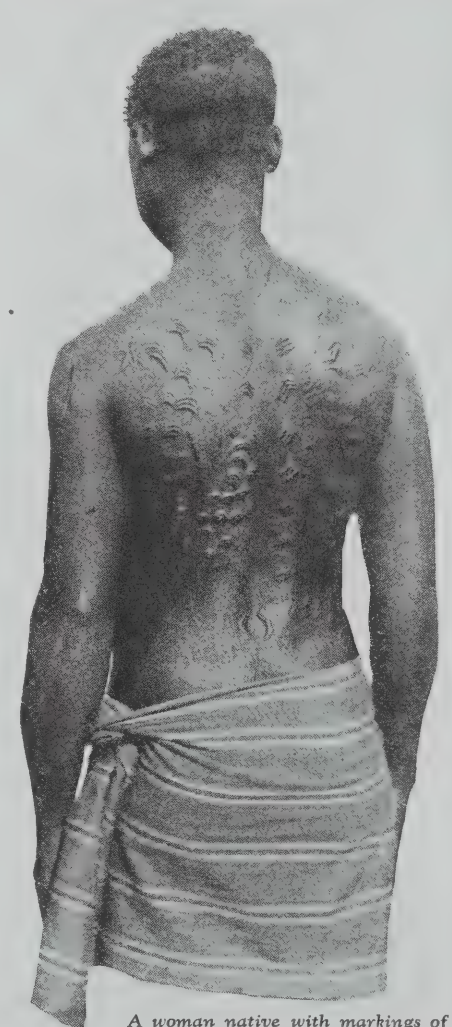
How is such a market to be founded? Very easily indeed, and palm wine, pigs and kids are the principal goods. The chief fixes a 'rendez-vous' to his most influent neighbors and explains his project about the market, which shall bring goods and wealth to the country; that scheme is readily accepted, for market is, for the indigen, one of the most important manifestations of his activity—the most important, in fact.

The reader must not be surprised if the market, the chief basis on which the economical life of the blacks rests, is here dealt with at length and in a special way.

Once they have come to a decision, they discuss the place and the date of the market: the place is always the top of a mountain, an upland or a wide plain; a date is chosen that cannot be prejudicial to the neighboring markets.

Those details being settled, the inaugural ceremony takes place. Palm wine flows most abundantly. Pigs and kids are sacrificed in inconceivable numbers. The many natives summoned indulge for several days in all kinds of revels, songs and dances. For two months the same ceremony is performed again at each market every four or eight days, according to what the organizers have decided as to its periodicity. The memory of that important day is perpetuated by the planting of a young tree, of the same species.

It may be asked whether the choice of that tree among so many others is not a vestige of primitive dendrolatry. The natives, when questioned, answer that they choose that tree on account of its rapid growth, of its exceptional resistance and of its beneficent shade, that restores the strength impaired by the length of the way, the heaviness of the burdens and the bite of the sun rays. Some of those trees are so old that it is impossible to tell when they were planted. We can take it for certain that, under the roots of those venerable trees, there rest the ashes of one or several slaves formerly sacrificed when the market was inaugurated: for such an offering was required by custom. Sometimes—but this practice is rapidly disappearing—the barrel of a gun is also buried; it is a sign of the peace which will reign in the future between the founder of the market and his guests, and the custom is akin to the burying of the tomahawk practised until not very long ago by the Amerinds.



A woman native with markings of which she is very proud.

One of the peculiar features of the native market is that it possesses the right of shelter as some churches and monuments of ancient Europe did in former times. A murderer may come and seek refuge there; he will be arrested only after the commercial transactions are settled. No serious meeting can be held there and in most of the markets the natives are not allowed to bear arms.

What is there to be found in native markets? Just listen:

'Who wants rats? palm worms? caterpillars and broiled grasshoppers? Who wants chicken and dried fish? pieces of antelope and of wild pig? Who will have palm wine? Come near and admire how perfectly wrought these cloths are? Who will have manioc loaves, palm almonds?'

All these cries are uttered by the women squatting in front of their goods, praising the fine quality of what they have to offer.

From that huge gathering, full of noise and mirth, there rises a mixture of offensive odors—odors of crowds, of smoke, of perspiration, of tainted meat, of tobacco—the whole being augmented by the sultry noonday heat, for market commences about eleven o'clock in the morning.

Besides the products of the country, objects of European make are very numerous: dress goods, knives, mirrors, padlocks, et cetera. These products are sold at a huge profit.

Each class of goods is displayed in a place specially reserved for it. Here is the place for the gourds of palm wine; here the various places for meat, fabrics, fish and pottery. The part reserved for native industry is full of interest. There one can see seats of all shapes made after the style of European chairs, wooden and earthen pipe; some have copper bowls. Others have double bowls, for the blacks, including the women, are especially fond of tobacco.

Here are bags in antelope leather, bracelets dented and streaked with a real care for symmetry; hoes, spears forged by the blacksmiths of the country—a caste honored or despised according to the different districts—who work the ore in a fire-clay furnace; pestles, kneading-troughs, dishes of tough wood, mats some of which are adorned with curious geometrical designs representing caymans, jackals or antelopes; musical instruments consisting of a sonorous box on which iron lamellas are fastened, so that the native holds it in both hands and plays with his thumbs alone; finely twined baskets.

Barter is still practised on the markets. A native will offer an armful of soft goods for a jar, another a spear, against a pair of pigeons or a quarter of antelope; but payment is usually made in European coin.

'I want,' says a white man, 'a hundred loaves of manioc at ten centimes each, for my caravan of bearers. That makes ten francs. Here they are. Have them!'

'Not at all! I want to verify!'

He counts them again, distrustfully, then: 'It's all right. You can take the loaves.'

ANOTHER African institution is the Kittemo, a kind of mutual, friendly association for savings and credit, of purely native origin. Its existence cannot be traced to any definite date. 'That association has always been in existence among us,' the blacks answer when asked about its origin.

An instance will clearly explain the working of the Kittemo. On the ground intrusted to him and placed under his rule, the chief Ndala, a wealthy, important man and a shrewd merchant, decides to found a Kittemo. He goes round the villages of his territory and pays a visit to those of his subjects who are best known for their easy circumstances or their disposition to business. He asks them to come to his place where they will all decide about the conditions of the Kittemo that is to be founded.

As is the case in all gatherings, of whatever importance, palm wine profusely flows on the day of the meeting, while the natives discuss the amount of the subscription, always payable in cash, fifteen francs for instance, and the number of members, let us say, twenty. Then the date for payments is fixed: they usually fall every fortnight, on some important market day. The organizer, Ndala, becomes the cashier of the association; he is the chairman, he collects twenty times fifteen francs, then hands over the whole amount to one of the members appointed by the majority, usually the richest of all, for confidence must be inspired from the very beginning.

Thus every fortnight each of the members has to pay fifteen francs to the 'Treasurer' appointed by the assembly to whom a sum of three hundred francs is thus intrusted.

What is he going to do with it? The black man, in that part of Africa, is shrewd and clever; the sum will soon be multiplied. Distance and time mean nothing to him; the 'treasurer' goes, with the three hundred francs in his pockets, to the white men's factory where he looks for the objects best suited to please and to tempt his countrymen: many pieces of colored cloth, mirrors, perfume-bottles, toys, et cetera. He then sells them at a considerable profit.

This is one of a series of articles on this subject by Mr. Galland. The next will appear in an early issue.

Old-Time Craftsmen

(*Continued from page 15*)

completed one novel and wanted to work on a second. Her writing skill was marked and she found a publisher who would pay her living expenses while she was writing her second novel. When she submitted the synopsis and first chapter he was enthusiastic.

It seemed that she would never complete any more of the novel, so the publisher's editor telephoned her. She had moved and left no forwarding address. The editor was irked, but he felt when her money ran out she would return.

A few days later a young woman with a mannish suit and a plaid Windsor tie entered his office.

'Living in Greenwich Village?' he said.

'Yes. And it's perfectly wonderful,' was her reply.

'How's the story coming?'

Engineering precision, strength, and perfection are the watchwords of every factory.

Out of the sleeve of her velvet jacket she produced a few typewritten pages. A single chapter!

'Your first novel will be your last novel,' she was told, 'unless you get out of the Village.'

She said mean things, and wept bitter tears, but the 'terrible editor' controlled the purse strings and she left the Village. Now she laughs about the 'silly ninny' she was in confusing atmosphere with art, inaction with craftsmanship.

* * *

The old blacksmith who used to shoe my grandfather's horses and put new tires on the wagon wheels some think was a craftsman. He was happy, without great cares, and could do his work without painstaking care.

Was he craftsman enough to make a repair part for a typewriter he had never seen and send it to a missionary in Ceylon? He may have been, but the chances are against it. He knew only the crudest measurements and gauges. Accuracy to the thousandth of an inch he thought was used only by astronomers, and he thanked his lucky stars he was not an astronomer.

Engineering precision, strength, and perfection are the watchwords of every factory. The blacksmith of yesteryear knew none of these. He knew happy sparks, the ring of the anvil, and a precision-free idyl of life.

Like most of the old-time craftsmen he did not know the master craftsmanship of the modern factory.

GREAT NORTHERN LAND IS ADVENTURE LAND

Electrification
aids the smooth restful flight of the
NEW ORIENTAL LIMITED

Translating the force of swift mountain streams into smooth power, the mightiest motor-generator electric locomotives in the world contribute much to the pleasurable flight of the New Oriental Limited through the snow-capped Cascades. This, the finest train to the Pacific Northwest, follows the scenic, low-altitude courses of ten great rivers; skirts for sixty miles the glistening peaks of Glacier National Park . . . Low round trip fares in effect May 15. Write today for further information.

GREAT NORTHERN
a dependable railway

Ready during the 1927 season—the new Prince of Wales Hotel in Waterton Lakes National Park, an extension of Glacier National Park across the international boundary into the Canadian Rockies!

Sapiro Suit Gets Under Way

(Continued from page 7)

Peteet, former secretary of the same organization, who prior to holding that office had been director of coöperative marketing with the American Farm Bureau Federation.

The jury was excused from the court room while counsel on both sides argued on the admissibility of this testimony, Mr. Gallagher contending that the purpose of the testimony was to charge the defendants with malice growing out of alleged negligence in succeeding publications after Hood and Peteet had complained of alleged inaccuracies in previous stories.

In ruling on the objection the Court said:

'If in this case it develops that the question of added or exemplary damages is finally submitted to the jury, of course recklessness or carelessness or the want of proper precaution on the part of the defendants, is a subject matter for the consideration of the jury and evidence tending to show carelessness or recklessness or want of such precaution is admissible, that fact would not mean that The Dearborn Publishing Company should take notice of all information of every kind and from every possible source. Some of the evidence that may be offered in this case on this subject may be of so little value that the Court should rule, as a matter of law, that it should not be submitted to the jury at all. There may be other evidence offered of notice to the defendant coming from sources of authority, sufficiently reliable sources, from those who know or are in a position to know the facts of which they speak, so that that evidence ought to be submitted to the jury upon that question. Therefore, it becomes a matter for determination as the evidence is offered whether or not it has sufficient evidentiary value upon that subject to be submitted to the jury.

'As to the particular testimony that is here under consideration, it is the judgment of the Court that until there is some evidence which shows some substance or authority back of the conversation which took place between Mr. Black and Mr. Peteet, that evidence, or repetition of that conversation or communication of that conversation from the witness now on the stand, would not be admissible, and the Court will so rule.'

Wednesday's session of the lawsuit, devoted chiefly to the reading of excerpts from the Sapiro articles in THE INDEPENDENT over objections by the defense, brought an important ruling from Judge Raymond when Attorney Gallagher sought to put into evidence a letter from A. C. Cherry of Yakima, Washington, general counsel for the Northwest Hay Association.

The matter came up after an article published in the August 23, 1924, issue of THE INDEPENDENT had been read to the jury. Mr. Gallagher then called for the letter of Mr. Cherry from the files of the plaintiff, which challenged the correctness of the article and had been received at The Dearborn Publishing offices subsequent to its publication.

Senator Reed joined with Judge Hanley in objecting to introduction of the letter in evidence, and in addressing the Court, after the jury had been excused, Senator Reed said:

SENATOR REED: Now, if your Honor please, this brings up the question of whether there can be read to the jury the letters sent by outside individuals not known to be in any way connected with Mr. Sapiro or in any way connected with the defendants, or either of them, and the statements contained in these unverified and unsworn documents read to a jury I presume that it is thought to introduce them on the ground that they are notice to the defendants. Notice of what? As they stand here today they are notice that somebody wrote a letter, and they pretend to recite certain facts, but they are no evidence of the fact. The evidence as to the facts must be produced before the Court. If this kind of evidence is introduced, we have this sort of situation, that a man with a pen writes a statement pretending to state facts, and that unsworn statement then goes to the jury as evidence of the facts recited, and no instruction that a court can give will ever take the impression from the mind of the jury, particularly in a case of this length where the evidence is almost interminable and the length of the trial very great.

Now, the only theory, in my judgment, upon which this letter can be offered, is as to notice. Notice of what? It must be notice of a fact, not notice of the state of mind of the writer, and before this letter can be introduced as a notice the fact or the facts which it recites must first be shown to exist, for notice of something that does not exist is no notice at all.

To put that in a plain and direct statement, what we say is this: That if a fact existed which, if it was brought to the attention of the paper, would have shown that its statements were false, if that fact existed and if that fact is proven to have existed, that then a letter calling attention to the fact which has been proven to exist may take the form and state of a notice. But, if the fact is not proven to exist, then the mere writing of a letter in which certain things are related as facts, constitutes no notice, and it is a mere hearsay statement and has no validity at all. So that we say that the first thing the plaintiff must do in this case, if he wants to introduce this letter, is to prove the various facts related in it—that is, the alleged facts related in it, to be facts, and then after he has proven the facts to exist, this letter might be taken, possibly—I am not so sure of that, there may be other reasons that might affect it—this letter might be taken as a notice to the defendant of facts which did exist.

Now, if we get outside of such limitations as that, where are we? There is this situation, that the publisher of a newspaper, having printed an article, or being engaged in printing a series of articles, can have read against him every letter that wholly irresponsible or unknown parties may see fit to write him, and in which they may denounce his articles as false and in which they may pretend to recite facts and yet there may not be a single fact back of any one of those letters.

Now, this letter here is a good illustration. I have not read the depositions but I understand the fact to be that the depositions show that this gentleman who wrote this letter was attorney for one of these associations, that at the request of one of the men connected with the association, who was one of Mr. Sapiro's associates—am I not correct in that?

MR. GALLAGHER: You are not correct.

SENATOR REED: I did not address myself to you.

MR. GALLAGHER: You have the truth, anyway, regardless of where it comes from.

SENATOR REED: I do not desire a controversy with counsel.

THE COURT: No, these controversies should not take place in the court room. Counsel should rise to his feet, if he wishes to make any remarks, and address the Court.

MR. GALLAGHER: Very well, your Honor.

SENATOR REED: Very well. I have not read these depositions, I have read excerpts from them, whether he was associated with Mr. Sapiro or not, if he was not associated with him in any way, so much more remote is this notice, but this man who writes the letter does not claim to know these facts of his own knowledge, but to have received them from somebody else, and that the depositions which have been taken in this case prove, or at least tend to prove, that a great number of the recitations contained in the letter are incorrect. So that if this letter is read to the jury it will go in with statements of notice of things which we contend do not exist, with false statements to be read to the jury.

Now, I will ask the Court for this time, because the question was bound to come up on other occasions in the trial, I take it, from the course of this examination.

And then that opens up another question if letters like these are to be read where certain people wrote in and protested, whether they had knowledge, or did not have knowledge, claimed or pretended to have knowledge, then what about the letters of the other side similar in their character, but reciting facts against or the alleged facts against Mr. Sapiro. Manifestly, if that class of evidence is to be gone into, it can be gone into on both sides.

Now, if the limitation is put that they must first prove the facts, the existence of the facts, then the letter is offered only to show notice of a fact proven; we have the case within some reasonable limits, and I think in a situation so that a Court—that a great injustice will not result.

Argument between counsel on both sides ensued, during which the Cherry letter and others pertaining to it were read to the Court.

In making his ruling denying the plaintiff permission to introduce the letter in evidence, Judge Raymond said:

THE COURT: There are two purposes for which the letter offered in evidence might be admissible, one, to show that THE DEARBORN INDEPENDENT after notice of certain facts had proceeded to publish an untrue article. That reason cannot apply in this case for the reason that the letter referred to is subsequent to the publication of the article to which it refers. An examination of the declaration, and its subsequent publication, discloses the fact that none of the subsequent publications referred in any way to the subject matter of the article which is criticized in the letter offered in evidence.

The other subject upon which the letter might be admissible pertains to the retention of Robert Morgan, or Dunn, as a correspondent, reporter or writer for THE DEARBORN INDEPENDENT, after knowledge of incompetency or unreliability, it being claimed that this letter offered in evidence disclosed to THE DEARBORN INDEPENDENT that the reports which Robert Morgan was making were not true, and that, therefore, he was then unreliable, and should have been discharged.

As a general rule, questions of reputation

and reliability, or the lack of those qualities, are shown in court not by specific instances of lack of reputation, but by general evidence upon those subjects. It is an unsafe proposition to say that because any man, whether a reporter, a lawyer or a doctor, makes one mistake, or several mistakes, that, therefore, he is incompetent or unreliable. A very competent reporter, or newspaper writer, may make very many mistakes, and still he might be classed as one of the most reliable of those in his class.

To enter upon this class of testimony for the purpose of showing unreliability would mean that in each of the hundreds, perhaps thousands of cases in which letters may have been written to THE DEARBORN INDEPENDENT in reference to these articles, and in which letters certain facts are stated, then each of the facts as appears would probably be met by a contrary statement on the other side of the case, and we would find ourselves trying out hundreds, and possibly thousands of collateral issues which might be raised by letters or correspondence which were sent to THE DEARBORN INDEPENDENT. There would be no end to the case if we went into those multitudinous issues.

It seems to the Court that as to whether or not Robert Morgan was a reliable, competent, dependable newspaper reporter or writer, must depend upon his general reputation, instead of resting upon specific instances, and upon testimony which rests upon letters received from various parties, many of them may be unknown, many of them may be from parties who are irresponsible.

REFLECTION brings the thought that if it were ruled that such letters could be received in evidence, it would be entirely possible for either party in the case to make evidence—to create a number, a large number of issues by causing to be written large numbers of letters, and in each one of those letters some fact would be disputed, and then issues would be raised upon that fact, the other party, of course, affirming its truth, and one would find a case involved in a multitude of issues which would confuse the jury as to the main issue of the case.

It would be most unsafe, I think, to receive that type of evidence, and the offer in evidence of the letter referred to is denied.

Letters of similar purport to that of the Cherry letter, which the plaintiff sought to introduce after the reading of subsequent articles were denied in evidence under the previous ruling. In all cases exceptions to the Court's ruling were taken by Attorney Gallagher on behalf of the plaintiff.

Mr. Sapiro took his first active part in the trial during the day when Attorney Gallagher called upon him to read some of the articles which appeared in THE DEARBORN INDEPENDENT.

With the opening of court on Thursday morning, Attorney Gallagher, pursuant to a previous suggestion by the court, filed a motion to amend the plaintiff's declaration in order more clearly to define the issues in the case.

Recess was ordered by the court for half a day in order to give the defense side an opportunity to examine the proposed amendment.

At the opening of court in the afternoon Attorney Hanley for the defense asked an extension of time until Monday morning to make a further examination of the amendment, saying, in part:

'We find that there are, if we count them correctly, fifty-two amendments in the way of eliminating certain alleged libels, in addition to a single amendment of several pages, or two or three pages, proposed to be added to the inducement. The result of these two classes of amendments, that is, the amendments to the inducement and the amendments in the way of eliminating alleged libels, makes it necessary for us, before we can intelligently determine upon what course to pursue, that we have got to reconstruct the declaration in the manner in which it now would read with the application of the amendments.'

Attorney Gallagher objected to any further delay, saying that there was no need for further examination, and that the amendment relieved 'them of the burden of meeting every one of these individual counts and permitting them to concentrate their defense upon the principal libels charged.'

Judge Raymond refused to delay the taking of testimony saying:

THE COURT: The Court is most anxious to make progress with this case and extremely loath to grant continuances, because much of the time that we have been in court so far has been consumed in discussions which have been profitable in clarifying the issues and undoubtedly have meant that over the whole period of the case time has not been lost; however the visible signs of progress are not numerous up to this time.

The Court then announced a tentative ruling on the amendment in which he indicated that he would grant the motion as to all amendments except one which sought to bring a new issue in the case. He reserved final ruling, however, until Monday when the defense side, if it wished to, could file other objections which would be considered before a final ruling was made.

With this matter cleared temporarily, Mr. Cameron was recalled to the stand and Attorney Gallagher resumed his questioning of him.

Another argument between counsel came when Mr. Gallagher asked Mr. Cameron this question:

'Did you ever talk with Mr. Ford respecting the publication of any proposed articles in THE INDEPENDENT, respecting the activities of Jewish people of this country?'

Judge Hanley at once objected and the jury was excused during the argument which followed.

In sustaining the defense objection to the question, Judge Raymond said:

THE COURT: The questions which have been put to the witness, the objections to which have been sustained, have to do with whether or not Henry Ford at some time suggested or authorized the publication of a series of articles having to do with the Jewish people.

COUNSEL has called attention to the fact that were Aaron Sapiro attacked individually, and alone, and charged with having formulated a plan by himself to subvert the interests of American agriculture, that that would involve no serious charge, because the impossibility of one man accomplishing that result would be so apparent upon its face. But that the charge comes much more serious when it is connected with the statement that he has organized or is the leader of or the attorney for a band or a ring or a conspiracy of Jews or international bankers.

I think it is true that the addition of a number of powerful financiers, in an alleged libelous article, and connecting the plaintiff with a considerable number of men of prominence and wealth, if the charge is proved, and justification is not successful, that it is materially adding to the seriousness of the libel.

The Court cannot, however, follow counsel in the apparent belief that because the word 'Jews' is added, and the words 'band,' or 'ring,' or 'conspiracy,' that that, taken in its ordinary, natural and commonly accepted meaning, makes the charge more serious. If it had been said that he organized and was at the head of an aggregation of men of any other birth or religion or nationality, the charge would be equally aggravated in the opinion of the Court, as if you took the word 'Jew' in the sense in which, in the opinion of the Court, it is generally and commonly accepted among all thinking people.

The declaration in this case contains innuendoes, that is, statements of the meaning of the use of words to a number in excess of 300, and yet in none of those innuendoes is there a suggestion that the word 'Jew' or any of its various derivatives or changes, of which there are something like 30 in the declaration—there is no suggestion by way of innuendo that any of those various names has any other than its commonly, ordinarily accepted meaning among people generally.

THE word 'Jew' is not eliminated from the case in any sense of the word. It appears in the declaration as amended hundreds of times, and cannot well be eliminated from the case, because it is there and must continue there until the end of the case. But, in view of the declaration as drafted, as originally filed, in which no suggestion is given that it is intended to place upon the word 'Jew' any other than its ordinary meaning, the Court must rule under the ordinary principles pertaining to issues framed in courts of justice, that to bring in this subject matter would be to bring in a matter which is not before this court. It brings in an issue foreign to the declaration as filed, and foreign to the issues as framed, and foreign to the declaration as now tentatively amended.

It might be said, and I think that is perhaps the gist of the argument of counsel for plaintiff, that if Henry Ford authorized or directed or counseled or suggested a series of articles against the Jewish people, that therefore he is responsible for any libel that may grow out of that suggestion.

It has been argued in this court since this case started, and I think it has been conceded by counsel on both sides, in any event it is the judgment of the Court, that so far as the legal consequences are concerned, so far as the right of any individual to recover damages growing out of such a situation is concerned, that there can be no recovery by any number of a religion or race or nationality because of a libel of the race generally. I think that law is so well established that it would be folly to urge otherwise. I can find no case, after a careful search of all of the available authorities, and the reading of many decisions in this country, which would warrant such a proceeding.

Now, if that is true, taking it for granted that Henry Ford, the defendant, did suggest or authorize or direct a series of articles against the Jewish people, in doing that he did something that would not subject him to an action for damages on behalf of any member of that race.

Until the questions are narrowed to the extent of showing some authority, either expressed or implied, to publish articles which reflected upon Aaron Sapiro as an individual, the objections to this class of testimony must be sustained.

After further argument by Mr. Gallagher the Court explained his ruling as not applying to individuals, saying:

THE COURT: The Court, of course, is willing to receive all the light possible upon this question or any other question involved in this case. However, I think the position of the Court is clear upon the matter, pos-

sibly not my first statement, but this recent statement at least seems to be clear to counsel as to just what the position of the Court is. If there is any evidence which tends to show that Henry Ford directed the publication of the articles with reference to individual Jews, any testimony of that kind, and the direction was so general as to authorize a libel as against the plaintiff in this case, such testimony as that may be admissible. But certainly the general questions which have been asked this afternoon, either taking the word 'Jew' in its innocent, or its more sinister meaning which counsel has at times projected into the case, I think such questions should not be permitted to be answered.

SENATOR REED: Does your Honor mean to say that this witness can be asked, in an attempt to fix the responsibility on Mr. Ford as to Mr. Sapiro, did Mr. Ford tell him to publish articles about certain individual Jews who are in no way connected with this case? That would not constitute any authority to publish statements about Mr. Sapiro. The evidence must go far beyond that. If they undertake to hold Mr. Ford for these articles, they must show that he gave the direction to print these articles, these particular articles which contain these attacks on Mr. Sapiro, and that he directed the attacks to be made upon Mr. Sapiro. Or, they must show that he said to Mr. Cameron, you attack every Jew that you can by name, go and hunt them up and attack all of them. There might be some question there, but your Honor's statement was a little broader than that. I take it that your Honor did not mean that, from what I gathered from your Honor's statement.

THE COURT: I think counsel has misapprehended my ruling, and neither would I want to have the statement of counsel to stand, in that it must be a direction to libel Mr. Sapiro individually, and by name. There might be a direction to attack a certain limited type or group of Jews, and to attack them individually, and whether Mr. Sapiro was known to Mr. Ford, or his name was known to him at that time, such authority might be sufficiently broad to authorize, or at least to make him responsible for an attack upon Mr. Sapiro. I do not know what direction the evidence may take, and that is the reason I am not making any ruling at all upon that question at this time. I shall have to make the rulings as the evidence develops upon that subject. The only question I am ruling on now is, a direction to attack Jews as a whole, or as a race is not admissible.

WHEN the jurors were again in their places in the box, Mr. Gallagher resumed his questioning of Mr. Cameron, dealing again with his editorship of THE DEARBORN INDEPENDENT, a subject regarding which Mr. Cameron had previously been questioned.

Q. (By Mr. Gallagher) Mr. Cameron, will you relate the circumstances of your appointment to the editorship of THE INDEPENDENT?

JUDGE HANLEY: Objected to for the reason that it has already been answered.

MR. GALLAGHER: I do not think it has, your Honor.

JUDGE HANLEY: The answer was that he did not know, and he wasn't there.

Q. (By Mr. Gallagher) Did you ever have any talk with Mr. Ford about your editorship of THE INDEPENDENT?

THE COURT: I will take the answer.

A. About the editorship?

Q. Yes.

A. It was just as I have said, whenever it has come up in a difference of opinion, I have been told that I am the editor.

Q. Well, before or after your appointment as editor, did you have any talk with Mr. Ford regarding the scope of your work?

(Objection overruled.)

A. No, he never talked about my appointment as editor.

Q. (By Mr. Gallagher) Did he ever talk to you about your duties as editor, thereafter?

A. Not in any sense as to outline my duties.

Q. In what respect did he talk about it?

A. Just in that general expression that I have given.

Q. You refer to the statement, 'You are the editor'—that general expression?

A. Yes.

Q. Before you assumed the editorship, and while the staff were working there in coöperation, did Mr. Ford ever discuss with you the publication of any articles respecting the activities of any individual Jews in this country?

(Objection overruled.)

A. No.

Q. (By Mr. Gallagher) Were there some articles published in THE INDEPENDENT respecting the activities of certain Jews?

(Objection overruled.)

A. I recall one or two or three articles relating to Bernard Baruch's testimony on the Congressional investigation of his conduct in the Board of War Industries.

JUDGE HANLEY: Wait a minute.

Q. (By Mr. Gallagher): Do you know if there was anything more than one article about that one man?

JUDGE HANLEY: Wait a minute. I move the answer be stricken out, your Honor.

MR. GALLAGHER: It may be stricken.

THE COURT: It may be stricken out.

Q. (By Mr. Gallagher) Mr. Cameron, so far as your memory serves you, was there no more than one article respecting the activities of an individual Jew published in THE INDEPENDENT before the articles in question were begun?

JUDGE HANLEY: I object to that as incompetent, irrelevant and immaterial. It relates now to whether more than one article was published about some individual Jew, years before the publication of the articles complained of, and that certainly could have no bearing on any relation or connection between Aaron Sapiro and either of the defendants in this case.

THE COURT: I think some time should be fixed in the question.

Q. (By Mr. Gallagher) Starting with about May, 1920, and up to January, 1922, what is the fact as to whether from time to time articles were published in THE INDEPENDENT which pertained to the lives or activities of certain Jews who were named therein?

(Objection overruled.)

A. Those that I have just mentioned are the only ones that come to my mind now as dealing with individuals.

Here Mr. Gallagher took up the matter of the publication of certain books by The Dearborn Publishing Company, questioning the witness regarding them, under continuous objections from the defense side, in effort to establish the attitude of Mr. Ford and THE DEARBORN INDEPENDENT regarding Jews.

Direct examination of Mr. Cameron was continued Friday morning, Attorney Gallagher directing his inquiries as to any discussions the witness, as editor of the paper, had with Henry Ford regarding articles about the Jewish people published in THE DEARBORN INDEPENDENT.

Objections were made by counsel for the defense on the ground that some of the articles referred to were published prior to those complained of in the case.

At one point the jury was excused while counsel on both sides entered a discussion. At its conclusion, Judge Raymond cautioned the attorneys that discussions were running too long and that if progress was to be made in the trial these would have to be limited.

IN RESUMING his questioning of the witness, Mr. Gallagher asked:

Q. Have you ever discussed with Mr. Ford any of the articles that have been referred to in the evidence here which ran between the period of April, 1924 to April, 1925?

(Objection overruled.)

A. Not as articles.

Q. And what has been your discussion with reference to that?

(Objection overruled.)

A. It would come up in the way of comment. I have just one definite recollection of one conversation regarding the Sapiro articles, as we called them in the office, and that was at the time of the demand for a retraction. Any conversation before that would be in just the midst of other conversations, comment upon comments in the press, or by letter, or by callers. We had numerous—hundreds of people call to see us about them.

Q. All right. Now, are you able to recall either the time or the occasion of the first discussion you had with Mr. Ford in that general way, concerning comments upon these articles?

JUDGE HANLEY: The witness just said he could not give any statement as to when it was. It has been answered.

MR. GALLAGHER: Let him answer the question for himself then.

THE COURT: He said he recalls one discussion. That was the time immediately following the time of an article?

(Objection sustained.)

Q. What is your best recollection of the entire conversation you had with Mr. Ford in which the comments upon these articles were discussed?

(Objection sustained.)

MR. GALLAGHER: If the Court please, I understood the witness to say that there were several occasions when comments were renewed by Mr. Ford and him touching these articles.

THE COURT: Is that the statement of the witness?

A. After the articles had been running a long time, for months, the comment accumulated—there were some passing conversations as he would happen to be in the office. No discussion of the thing itself, but just in a casual talk, if it happened to be on my desk at the moment, letters, or callers just going out, or callers who had been there, or something of that sort.

THE COURT: Do you recall the time or the substance of any of those conversations?

A. I just know that it was after they had been going a long time. It seems to me months—more than three or four or five months.

THE COURT: You have no more definite memory to time than that?

A. No, I just have the general result in my mind.

THE COURT: Do you have any definite memory as to the substance of those conversations?

A. Just that they were mostly one-sided, and my trying to tell him of certain things that had come up, or certain things that had been said to us or written to us.

Q. Let's have those conversations the best you can recall them.

(Objection overruled.)

A. Well, I can just illustrate by something that might have happened—

THE COURT: That will be objectionable. Unless you have definite memory of the conversation or substance.

Q. Let's have your best recollection.

JUDGE HANLEY: I object to that. The

witness has already said he had no recollection and he could merely illustrate.

MR. GALLAGHER: He has not said that.

THE COURT: Ask him the question directly and see whether he has or has not. We can pass this up.

Q. Mr. Cameron, you have referred to some occasions when comments arose. Will you give us your best recollection of the substance of the talk upon such occasions?

JUDGE HANLEY: Objected to. You have already ruled to the effect that he should be asked whether he had a recollection before being asked—

THE COURT: I think you should. I have asked that you inquire of the witness so that we won't waste the time in repeating questions that are so general that the witness does not know what is called for. Let's find out whether he has any memory definitely or indefinitely of these conversations, or the substance of them, and if he does not we can pass that subject and proceed to the next.

Q. Mr. Cameron, as I understood you referred to several occasions when comments were made upon articles, and that matter was discussed with Mr. Ford, is that right so far?

JUDGE HANLEY: Just a minute.

A. The comment was not upon articles.

JUDGE HANLEY: Wait a minute, witness. I object. Your Honor has said that the witness should be asked whether or not he has any recollection of such a conversation. Now, I think counsel should obey the instruction of the Court.

MR. GALLAGHER: I object to the Court—

THE COURT: Never mind, just proceed to ask the question that the Court indicated. I think you understand it.

MR. GALLAGHER: I am frank to say, your Honor, there is some confusion in my own mind as between the witness, the Court and myself. I may be entirely unfounded, but I certainly do not understand our mutual relation right now. Now, is the present question improper, if the Court please?

THE COURT: Proceed with the question. You have asked a part of a question, as I understand it, it is not completed and it was objected to.

(The question was repeated by the Reporter.)

JUDGE HANLEY: I object to that, your Honor. I think we should first find out if there was any conversation that he recalls.

THE COURT: I think you should complete your question instead of asking a part of the question and asking if it is right. I think the Court is perfectly clear in what I want to ascertain, and that is whether the witness has any memory or recollection of conversations, or the substance of them. I think it could be asked in a very short, simple, direct way, and I think all of us would understand just what is being sought, and I think it is time that we make some progress in this case.

* * *

THE COURT: Do you have any recollection, Mr. Cameron, of the substance of the conversations to which you have referred?

A. Not as conversations, just the general tone of the communication.

THE COURT: Have you any concerning that to which you are testifying about from memory?

A. I have no definite words—no, they were too casual.

THE COURT: Does your memory serve you to the extent that you are able to state the substance of those conversations, even though you may not remember the precise words of the conversation?

A. Well, I would say, 'Here is the story —here is a letter from a man' or 'Here is the story that a man—'

THE COURT: No, just answer the question. Read my question, Mr. Reporter.

(The question of the court was repeated by the Reporter.)

THE COURT: Answer that yes or no, and we will get to an end or a beginning.

A. In that sense, no.

THE COURT: Proceed.

Q. When you say 'In that sense, no,' what do you mean?

JUDGE HANLEY: That is objected to, your Honor. That answer is self-explanatory and the question is argumentative.

THE COURT: Objection sustained.

MR. GALLAGHER: Note an exception.

Q. How many such talks have you had with Mr. Ford?

JUDGE HANLEY: That is objected to as incompetent, irrelevant and immaterial.

THE COURT: Objection sustained.

MR. GALLAGHER: If the Court please, I think it ought to be obvious to the Court that this man must have some substance of recollection.

THE COURT: Well, he says he has not, and he is your witness, and I do not know of anything further that can be done about it. If he hasn't any recollection of the substance of the conversations, it is the end of the matter.

MR. GALLAGHER: Well, this further can be done, when there is a manifest evasion on the part of a witness—

JUDGE HANLEY: Your Honor, I take an exception to the abuse of this witness at this time before the jury, and I do not like to interrupt counsel, but I think it is mandatory upon me in fairness to do that. This is only a continuation of what has been said, abusive and questioning the integrity of this witness.

THE COURT: I think the matter should be dropped where it is and stand by the ruling the Court has made.

MR. GALLAGHER: Note an exception.

Q. Mr. Cameron, are you able to recall the general purport of the statements made by Mr. Ford upon such occasions?

JUDGE HANLEY: That is objected to.

THE COURT: Objection sustained.

MR. GALLAGHER: Note an exception.

Q. Are you able to give us, Mr. Cameron, the general character of Mr. Ford's expressions upon such occasions?

JUDGE HANLEY: That is objected to. The last two questions have been mere repetitions of questions your Honor has ruled upon, with a mere change of a word, but no change in their sense.

THE COURT: I think the Court has indicated that subject matter should be closed under the statement of the witness, and I think it should be. You may have an exception to the Court's ruling.

Questioning of the witness regarding Jewish articles published in THE DEARBORN INDEPENDENT, their suspension, various correspondence and matters pertaining thereto, occupied considerable time and brought numerous objections from the defense side. Mr. Cameron also was asked to identify the original manuscripts of the articles upon which the suit is based.

FOLLOWING this, Mr. Cameron was temporarily excused from the stand pending his being able to produce the demand for a retraction made by Mr. Sapiro together with certain papers which were attached to it.

The plaintiff then called Mr. Miller, his testimony being:

Q. (By Mr. Gallagher) Mr. Miller, where do you live, please?

A. Washington, D. C. is my legal residence.

Q. How old a man are you?

A. 67.

Q. Married or single?

A. Widower.

Q. Any family?

A. Three children, grown.

Q. What is your present occupation?

A. Newspaperman, and writer.

Q. How long has that been your occupation?

A. Practically all of my life.

Q. Do you know Henry Ford?

A. I do.

Q. In what capacity were you acting when you first met him?

A. I came out here for a New York newspaper to interview him regarding money.

Q. When was that?

A. In 1920 I think.

Q. Since that first meeting in 1920, have you met Mr. Ford from time to time?

A. Several times. I interviewed him a few times for a syndicate, and have written about him.

Q. Were you ever in the employ of The Dearborn Publishing Company?

A. One year.

Q. What year was that?

A. 1923.

Q. During that year did you meet and talk with Mr. Ford?

A. I did, several times.

Q. Was there ever any occasion when you talked with him when Aaron Sapiro was the subject of the conversation?

A. I remember distinctly that he mentioned him once.

Q. And when was that?

A. About the middle of October, 1923.

Q. And where?

A. In the areaway, entering the office of THE DEARBORN INDEPENDENT, or his office.

Q. At Dearborn?

A. At Dearborn, yes.

Q. What was this conversation, as far as it involved Mr. Sapiro?

A. Well, Mr. Ford two or three times —he said this time, as he had two or three times, 'Why don't you write an article about the Jews and the Reserve Bank down there, Eugene Meyers, and, do you know Aaron Sapiro?' 'No,' I told him I did not know Aaron Sapiro.

(Objection overruled.)

Q. You say that Mr. Ford asked you if you knew Aaron Sapiro?

A. Yes, sir.

Q. What did you say?

A. I told him I did not know him; I had heard of him.

Q. What else was said?

A. He said that he was organizing the farmers with that bunch of Jews down there, and trying to bilk them.

Q. Was there anything else said at that time?

A. Well, he said, 'We are going to expose him, and I think that THE DEARBORN INDEPENDENT has a good circulation among the farmers, and we will upset their apple cart.'

Q. Was there anything further said by Mr. Ford upon that occasion?

A. No, I think not, of any moment.

Q. As far as he was concerned?

A. Yes.

Q. In the course of your authorship, Mr. Miller, have you written any book on Mr. Ford?

A. Yes, sir.

CROSS-EXAMINATION

Q. (By Senator Reed) Did you say that you worked for THE DEARBORN INDEPENDENT for a year?

A. Yes, Senator.

Q. You set that claim up in court in Washington and you were defeated?

(Objection overruled.)

A. I lost.

SENATOR REED: That is all. Thank you, sir.

(A concise report of the proceedings in this case giving the testimony of the witnesses will appear in our next issue and will be continued week by week until the termination of the trial.)

CAN YOU TELL ME?

Question. When were postage stamps invented? When were they first used in the United States?

ANSWER. Adhesive postage stamps as now used are said to have been invented by James Chalmers of Dundee, Scotland, in 1834, and came into use in Great Britain, May 6, 1840, when Parliament had sanctioned their use. M. de Villayer of Paris in 1653 invented letter covers or wrappers with a distinctive mark which he sold for two sous as a frank for his collectors who took them from the letter boxes he established in the chief thoroughfares and delivered to destination addressed on them. In the United States the Government, being unwilling to undertake the expense of a general issue of postage stamps, in 1845 permitted the postmasters of certain towns and cities to issue stamps at their own expense and for their own convenience. The postmasters of Alexandria, Virginia, Baltimore, Maryland, and other cities adopted the plan with such success that the Government in 1847 undertook a general issue.

❦ ❦ ❦

Q. To whom is the quotation, 'Millions for defense, but not one cent for tribute,' attributed?

A. To Charles Cotesworth Pinckney, when ambassador to the French Republic in 1796. The proclamation of Jay's Treaty with England in March, 1796, had threatened a rupture between the United States and France. In September, Pinckney was sent as minister to France. The Directory refused to receive him but intimated that a money payment might settle the dispute. It was then that Pinckney made his famous answer. But Pinckney is said to have denied the story: 'No, my answer was not a flourish like that, but simply, "Not a penny; not a penny."'

❦ ❦ ❦

Q. Is the story of The Man Without a Country *true?*

A. Dr. Edward E. Hale, in a speech delivered in 1897, said: *'The Man Without a Country* was based on a letter written from a United States frigate. I took pains to use the name of a frigate that had been at the bottom of the sea for fifteen years. I had to give it a latitude and a longitude and I was careful to place it on top of the Andes. I took occasion to read up on the doings of our Navy for the year in which the incidents occurred, so that I might avoid using the name of any officer or vessel actually in service at that time. That was for the purpose of keeping fiction and fact separate.'

❦ ❦ ❦

Q. Was the Ticonderoga *sunk by submarine guns and did the U. S. S.* Galveston *see it and refuse aid?*

A. The *Ticonderoga* was one of fifteen merchant vessels in an eastbound convoy which was under the sole escort of the U. S. S. *Galveston*. Before leaving port the masters of all the merchant ships of the convoy had been informed that they could expect no assistance from the escort if they straggled from the convoy. About dawn on September 30, 1918, a German submarine attacked by gunfire the *Ticonderoga*, which had straggled five to ten miles out of her position with the convoy. The *Galveston* headed for the scene of the attack, opened fire and continued firing until the submarine ceased firing. The *Galveston* then returned to her chief responsibility—the protection of the convoy. About one hour after the *Galveston* had ceased firing, and after she had returned to the convoy, the enemy submarine again attacked the *Ticonderoga* and sunk her. The *Galveston* did not, therefore, refuse aid to the *Ticonderoga*; on the contrary she stopped one attack by the submarine; and then, as there was no way to determine whether or not the submarine would attack the rest of the convoy, the *Galveston* very properly returned to protect that convoy.

❦ ❦ ❦

Q. What are the five largest states in the United States?

A. Texas, California, Montana, New Mexico, and Arizona.

❦ ❦ ❦

Q. Who are the members of the Interstate Commerce Commission and how are they elected?

A. The vacancies in the Interstate Commerce Commission are filled by presidential appointment. The present members are: Joseph B. Eastman, Balthasar H. Meyer, Henry C. Hall, Clyde B. Aitchison, John J. Esch, Johnston B. Campbell, Ernest I. Lewis, Frederic I. Cox, Frank McManamy, Thomas F. Woodlock, and Richard V. Taylor.

❦ ❦ ❦

Q. Can you give me some information regarding the life of Governor Blount of Tennessee?

A. William Blount was born in Bertie County, North Carolina, March 26, 1744. He was a member of the North Carolina legislature for several terms after 1780 and of the Continental Congress in 1783-84 and again in 1786-87. In 1790 he was appointed by Washington to be governor of 'The Territory of the United States South of the Ohio' (including the present Tennessee), and soon afterward founded the city of Knoxville. When Tennessee was admitted to the Union in 1796, Blount was elected to the United States Senate from that state; but in July, 1797, he was detected in a conspiracy to wrest New Orleans and the Floridas from the Spaniards on behalf of Great Britain and was summarily expelled on a charge of 'high misdemeanor entirely inconsistent with his public trust and duty.' The pro-British scheme caused much excitement at the time, both in and out of Congress, and has since been known as 'Blount's Conspiracy.' His formal trial was postponed until 1798, and early in 1799 the Senate decided to dismiss the impeachment on account of lack of jurisdiction, Blount not then being a member. The whole incident increased considerably Blount's popularity in Tennessee and soon after his expulsion he was elected to the state senate over which he presided for some time. He died in 1800.

❦ ❦ ❦

Q. What happened to the U. S. S. Cyclops, *when and where did she disappear, what was her cargo, and how many men were lost?*

A. The U. S. S. *Cyclops* loaded a commercial cargo of 10,800 tons of manganese ore at Rio de Janeiro and sailed on February 16, 1918, via the Barbados for Baltimore, Maryland, where she was due March thirteenth. She arrived at the Barbados March 3, 1918, for coal and left on March fourth. Since her departure there has been no trace of the vessel. There were no enemy submarines in the western Atlantic at the time and it has been definitely ascertained that neither German U-boats nor German mines came into the question. It is known that one of the two engines of the *Cyclops* was damaged and that she was proceeding at reduced speed, but even if the other engine had become disabled it would not have had any effect on her ability to communicate by radio. The *Cyclops* was under the command of George W. Worley, Lieutenant Commander, U. S. Naval Reserve Force. The total number of lives lost was 309.

❦ ❦ ❦

Q. Can an alien who is to become an American citizen in 1928 visit his relatives in Europe for a few months this year or will such absence from the United States prevent his securing his papers next year?

A. The law requires that the court admitting an alien to citizenship shall be satisfied that the petitioner has resided continuously within the United States for at least five years immediately preceding the date of the filing of the petition and up to the date of the hearing. Courts usually hold that a short absence of a temporary character does not interrupt the residence, especially where the absence does not exceed six months. An extended absence, however, usually requires a new residence to be established and its continuance for five years from the date of return to the United States, before a petition may be filed on which naturalization can be lawfully granted. The last year of the five years the petitioner must live in the state in which the petition is to be filed. The question of whether any particular absence has interrupted residence can be determined only by the court on a hearing of a petition for naturalization.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

BRIEFLY TOLD

THE FIRST NEGRO TO HOLD a federal office was Ebenezer Don Carlos Bassett, who was appointed minister resident and consul general of the United States to Haiti by President Grant in 1869.

A BERLIN CANDY MANUFACTURER, by way of advertising, employed an aviator to fly over the city and drop chocolate drops. The idea seemed to be making an impression when the police, after receiving reports of so many bruised heads, stopped the scheme.

THE AVERAGE SIZED oyster consumes thirty quarts of water a day.

ANYONE IN JAPAN WHO reviles existing laws or confuses the duty of the people to observe them is subject to imprisonment of not less than one month nor more than one year, and to a fine of not less than five nor more than 100 yen.

MAORI FEMININE NAMES are poetical. Among others are the following: Plume of the Precious Bird, White Heron, The Young Lady in Love, The Diamond.

THE ROYAL AUTOMOBILE CLUB of Sweden, as a service to its members, is putting mechanics along the country roads to assist motorists and to act as guides.

THERE ARE TODAY approximately five million radio receiving sets in use in the United States, which means about twenty million potential listeners-in each night.

SOME INSECTS HAVE THEIR hearing apparatus in their legs.

THE MOTTO OF Earl Marischal Keith, who founded Marischal College, Aberdeen, is:

Thay haif said.
Quhat say thay?
Lat thame say.

It is carved over the entrance of the main building.

AN OMELET MADE FROM the egg of an ostrich would feed eight persons.

WHEN A NEW YORK STATE farmer killed a sick cow, he found in her stomach five nails, pieces of wire and iron washers. Several pieces of wire had penetrated the heart.

A LONDON MAN HAS A bald parrot, very active and talkative, which records show was captured by a British soldier in India in 1801.

PRESIDENT COOLIDGE HAS NO telephone on his desk. Whenever it is necessary for him to make or answer a telephone call, he goes into a booth in a small room adjoining his office.

THE CRATER OF MOUNT Vesuvius was once the hiding place for escaped slaves, brigands and outlaws, but that was before the eruption which destroyed Pompeii.

STRAWBERRIES CAN BE grown with success in every one of the forty-eight states.

WORN-OUT AUTOMOBILE TIRES are being made into special armor to be used for protecting horses in Spanish bullfights.

THE GRAND LLAMA OF LHASA now uses electricity due to the energy of a young Tibetan engineer who imported expensive machinery to harness the numerous waterfalls.

THE BAMBOO HOLDS THE record for speedy growth among trees, new shoots rising at the rate of nine inches in each twenty-four hours during the rainy season.

THE FOLLOWING ARTICLES WERE gleaned in one month of 1926 from Atlanta, Georgia, street cars: 420 umbrellas, 2 lobsters, 6 live chickens, a glass eye, 187 bundles, 149 pairs of gloves, 87 purses, a quart of oysters, 28 pairs of glasses, 26 suit cases, 23 articles of jewelry, a guinea pig, 4 sets of false teeth, a string of garlic, a pair of brass knuckles, one baby boy and a Chinese orchid.

A HEALTHY APPLE TREE has an average of thirty to fifty leaves to each apple.

ACCORDING TO THE DOLBEAR formula, if one subtracts forty from the number of cricket chirps a minute, divides the remainder by four and adds fifty to the result, he will be able to tell the temperature without a thermometer.

THE WORLD'S LARGEST ORGAN is that just installed in Liverpool Cathedral, England. It has five rows of keys, 222 draw knobs, 168 stops, 10,934 pipes, and is played by an electric pneumatic action driven by motors requiring thirty-five horsepower. There are seventeen telephones from various parts to communicate with the man at the keys during tuning.

THE MOST COMMON FAMILY name in the United States is Smith, with a following of 1,304,200 persons. Johnson is next with 1,024,200; Brown, 730,500; Williams, 684,700; Jones, 658,300; Miller, 625,800; Davis, 537,900; Anderson, 477,300; Wilson, 422,300; Moore, 363,400.

DOLLAR BILLS SHOWERED GIRL shoppers in Boston recently as they were walking past the offices of an insurance company. Search of the building brought no information as to the owner of the money.

AUSTRALIA IS PRODUCING a new fruit called the cucumber apple for use in salads. Although it has the appearance of an apple, the flavor is said to be distinctly that of a cucumber.

NATIVES OF BOHEMIA BELIEVE Judas hanged himself on a willow tree, and that consequently this tree has a special attraction for suicides.

ALTHOUGH 450,000,000 horsepower from water is now available in the world, only about 30,000,000 horsepower is being utilized.

WHEN THE FAMOUS CLOCK IN St. Paul's Cathedral, London, broke down recently, a workman, watch in hand, was stationed in the tower to move the hands of the timepiece forward second by second.

FINLAND SO DISLIKES Bolshevism that forty red automobiles contained in an assignment from an American manufacturer had to be repainted before Finnish buyers would consider them.

THE STATE OF UTAH CONTAINS enough coal to supply the United States at the present rate of consumption for 250 years.

ALASKA, BOUGHT BY THE United States from Russia in 1867, has in the last sixty years yielded 183 times the amount paid for the territory. Salmon, gold, copper, furs, halibut, herring and cod are the principal products in the order of their importance.

DURING THE MAORI WAR OF 1860, rumor reached the native chiefs that the British commander's forces, waiting for the river steamships, was short of food. Under a flag of truce the chiefs sent down a fleet of boats laden with milch cows and other food, with a communication saying there was no glory in fighting hungry men.

POSSUM TROT, INDIANA, has a population of fourteen persons and twenty-eight dogs.

THE POSTAGE STAMP HAD its origin in Great Britain on May 6, 1840, the United States entering the field in 1847 with stamps of five-and-ten-cent denominations, engraved with portraits of Franklin and Washington respectively.

IN AN EFFORT TO ENCOURAGE scientific farming the Turkish Government has agreed to pay half the cost of every tractor bought by its farmers. Due to sparseness of population and lack of man power, only about one-fifth of Turkey's arable land is now being worked.

IMMIGRANTS TO THE United States will be shown Department of Agriculture film productions at ports of entry, acquainting them with American history, geography and agricultural methods.

NORTH ATLANTA, GEORGIA, maintains a Court of Conciliation from which lawyers are barred 'because they frequently clutter up the wheels of justice,' and where the litigants talk over their disputes with the judge, A. S. Libby, who is also mayor of the town. The plan has proved a success.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page continues the discussion of last week.

ɣ ɣ ɣ

The cover design this week, by Oliver Kemp, is the first of a series which will appear from time to time treating of the history of transportation.

ɣ ɣ ɣ

We sometimes hear of ecclesiastics who have been made 'Chaplain-in-Ordinary to the King,' but to be chaplain-in-ordinary to a king of films is a still more responsible position. Dr. Barton gives his experiences as 'spiritual director' in the production of a notable Biblical picture at Hollywood. In such cases the most minute pictorial details must be historically and technically correct. Such is the painstaking realism of the modern movie! Dr. Barton takes us behind the films. (p. 1)

ɣ ɣ ɣ

Readers of modern novels are usually far from the truth in their visualization of the writer's personality, especially if the writer is a woman. May B. Whiting gives us an intimate picture of Ellen Glasgow, the author of *Barren Ground*. It shows the writer to be very charming and intensely human. (p. 3)

ɣ ɣ ɣ

'We fine the man who builds better and safer houses! And we fine the man who increases the manufacturing business of the nation, and increases the amount of wages that he pays, and who adds to the wealth and purchasing power of the country. We fine him by higher taxes.' Thus Charles Johnson Post, who makes a plea for taxation along saner and more scientific lines. (p. 4)

ɣ ɣ ɣ

We give a concise report of the second week's proceedings in the libel suit for $1,000,000 damages brought by Aaron Sapiro against THE DEARBORN INDEPENDENT. (p. 6)

ɣ ɣ ɣ

Should books be our servants or our masters? We are so accustomed to 'sit at the feet' of books or, more strictly, at the feet of their authors that any other attitude seems wrong. But the printed page has its obligations and limitations. There are certain things it ought to do for us in order to justify its existence. It must not impose upon us. Its compilers are not all literary Gamaliels. (p. 8)

ɣ ɣ ɣ

Lucy Percy, Countess of Carlisle, became a national figure through sheer force of personality. This is the more remarkable because she lived in the 17th Century, a period marked by civil wars in which women played no part except as playthings. Lucy Percy was one of the pioneers of the emancipation of women from feudal thralldom, although she herself did not realize that fact. Frances Holbrook Pfeiffer tells her romantic story. (p. 12)

ɣ ɣ ɣ

With the spring flowers comes baseball and with baseball there looms up the giants of the game. 'The Weiser Typhoon' is one of them. In a character sketch of Walter Johnson, H. G. Salsinger is at his best. (p. 14)

ɣ ɣ ɣ

Have we made too many sacrifices on the altar of the old-time craftsman? Donald A. Laird thinks so. He says that with a large expenditure of patience and time the old-time craftsman produced things that were more ornamental than useful, but for things that are both useful and ornamental produced at a fraction of the former cost he commends present-day methods. (p. 15)

ɣ ɣ ɣ

Did you ever come across the body of any wild creature of fur or feather that had died a natural death? Did you ever find in the woods a deer or a bear that had succumbed to senile decay? There used to be a barrack-room ballad of the Kipling type which declared that 'old soldiers never die; they simply fade away.' This seems to be the case with the creatures of the wilds. Hugh A. Studdert Kennedy has tried to elucidate this. (p. 16)

ɣ ɣ ɣ

People go to market in Africa just as they do here, and native women tramp many miles through the tropical forest with their weird collection of wares. You may buy anything from a pickled caterpillar to an elephant steak in these jungle emporiums, as related by Henri Galland, a French Government official who has studied the African Negro at close range. (p. 24)

ɣ ɣ ɣ

Our readers don't always agree in their opinions and criticisms. However, we have pleasure in giving both sides:

Paragould, Arkansas.

I have been taking THE INDEPENDENT for more than six years, and I have preserved every copy since. My wife and I take twenty-six journals and I think THE DEARBORN INDEPENDENT is 'the best of them all.' I don't take a single journal that I do not read. I have averaged nine hours a day, in reading, the last six years.

W. L. SKAGGS.

Cleveland, Ohio.

Occasionally my curiosity gets the better of me and I take the time to glance through THE DEARBORN INDEPENDENT.

The little underhanded, untruthful insinuations that now and then appear regarding the conditions in Mexico have earned for the paper the title, Chronicler of Prejudiced Thought.

FRANK R. INGMAN.

Chicago, Illinois.

Although I am a teacher, farming is my hobby; and I think that more of your topics might well run along agricultural tastes. You do hit the Muscle Shoals graft on the head in post-maul fashion, and since I have recently seen that great plant lying idle in decay it surely struck home and would stir up any farmer who might see it.

Keep up the good work of constructive criticism that you so courageously have begun.

EMIL JOSI.

WILLIAM E. BARTON, D.D., LL.D., Litt.D., has had a distinguished career as a preacher and writer and has toured the world. Through his profound knowledge of Bible history and ecclesiology he is eminently qualified to edit a Scriptural story film, his experiences of which he now relates.

MAY B. WHITING'S stories of life among the New England fishermen and sailors are well-known to our readers. Her interviews with literary celebrities are no less popular. Miss Whiting possesses in an eminent degree the art of telling a story about story-tellers.

CHARLES JOHNSON POST resides at Bayside, Long Island, New York. He is a son of Louis F. Post, Assistant Secretary of Labor and is an able exponent of the Single Tax theory.

FRANCES HOLBROOK PFEIFFER lives in Los Angeles, California. She has made a special study of California history and has delved into odd corners of history in other countries. In this way she has unearthed much material of romantic and literary value.

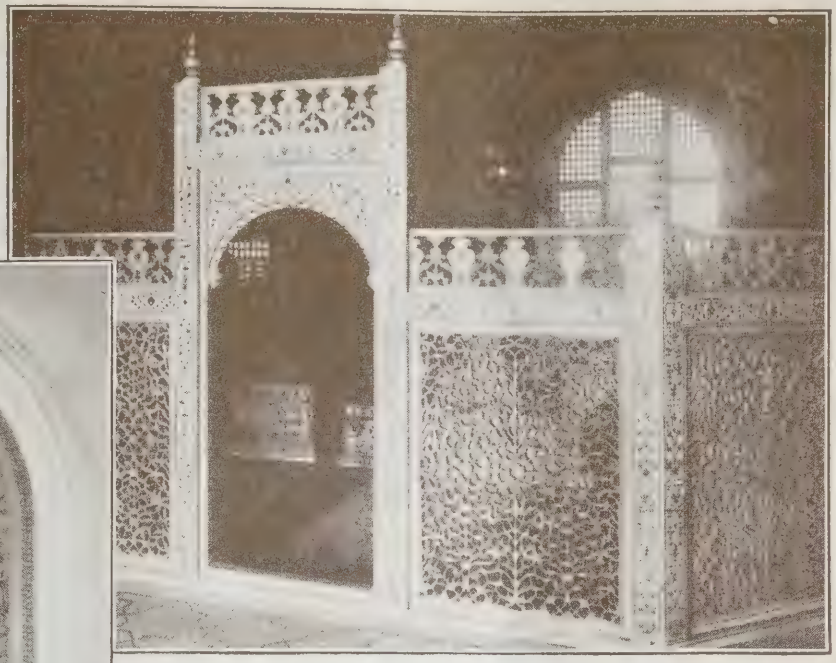
H. G. SALSINGER, sports editor of one of the big dailies, knows his baseball as well as any writer in the country. He is equally at home in treating of other outdoor recreations, and keeps a keen eye on the athletic world generally.

DONALD A. LAIRD is psychologist of Colgate University. His writings on psychological subjects have been widely read and he has contributed to our columns several popular articles in which the functions of the human senses form the main theme.

HUGH A. STUDDERT KENNEDY is a native of Lancashire, England. After being graduated from Trinity College, Dublin, he entered the field of journalism and was for several years London correspondent of the *Christian Science Monitor*. Later he went to Boston and became associated with the *Monitor* as foreign editor and editorial writer. He has been since engaged in editorial work and special writing in New York and elsewhere. A few years ago Mr. Kennedy made a tour through Europe investigating economical and political conditions.

HENRI GALLAND is administrator of the Colonies of French Equatorial Africa. His experience in this capacity, in which he has had to perform the functions of judge and jury and court of appeals in native disputes and native affairs generally, has given him an extraordinary knowledge of the psychology and customs of the blacks.

Magnificent Gems of Man's Artistry



Interior view of the Taj Mahal, Agra, India. Tombs and marble grill, lighted by daylight filtered through translucent alabaster and alabaster screens. This is noted for its open tracery and inlaid work of unsurpassed beauty.

—*Harris and Ewing.*

Roger's bronze doors of the United States Capitol, largest on any public building in the world, were designed and modeled by Randolph Roger in 1858. They are never closed except on special occasions.

THE world has never yet come to the point where there was nothing to be done. In the most 'idle' times, when shops are closed and men are out of work, there is always much that should be done. This is a mystery:— With so much to be done, why should there be idle times? Solve this riddle and you will create a new earth.

CHRONICLER OF THE NEGLECTED TRUTH

JUDAS

GAMALIEL BRADFORD

THEY called Him King; and I would have no King:
Let all be equal, I, let none be best.
Why should the weakling John be ever pressed
Against His bosom, Peter urged to fling
His clumsy zeal about, while I must bring,
Forsooth, the bag behind, and feed the rest,
Never be praised or flattered or caressed,
Although so watchful in my stewarding?

They called Him Son of God. In rage I saw
This vain idolatry. Was I not wise,
Not honest, not in truth administering
The holy precepts of our sacred law?—
Oh, God! Those pleading, tender, earnest eyes!
Oh, God! Oh, God! why did I do this thing?

Roman Debate *on the* Agitator *of* Galilee

By MURRAY GODWIN

Illustrated by R. S. McMULLIN

DISCUSSION arose in the Roman Senate about A. D. 40 over an occurrence which ordinarily would have escaped notice in the Imperial City.

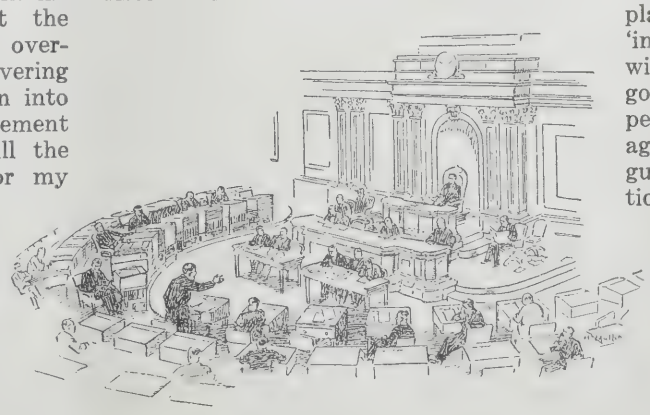
On a pleasantly warm spring afternoon, the statesmen were dozing in their seats, while a monotonous account was read of the expense of building a fortified aqueduct somewhere in Gaul. As the reading was completed, a white-haired, tall, and sinewy figure demanded and was given the floor.

Senator Bora, from Idajo, a remote Iberian province, was not unknown to the imperial political world. On the contrary, perpetually angered (it was said) by the consciousness that his constituency was in all likelihood the most poverty-stricken in the Empire, he had managed to make himself generally obnoxious by his balking and quibbling on a score of unimportant issues.

'It has come to my attention,' declared the Senator from Idajo in his customarily acrid voice, 'that the imperial governor of Judea has overstepped his lawful powers by delivering a Galilean agitator for execution into the hands of the Conservative element in the city of Jerusalem. Will the Imperial Spokesman explain for my benefit this unofficial and unwarranted collusion of a Roman colonial governor with those who wish to rid themselves of their enemies in a purely local, purely Jewish quarrel?'

Some of the members stirred uneasily, others shifted their paunches into a position which allowed them to stare peevishly at the speaker, who stood in the rear of the house. B. Taurus Celogus, Imperial Spokesman, rose affably in the imperial gallery to the right of the rostrum. Imperial Governor Pilate, he informed the irate senator, had forwarded an account of the incident in question. Contrary to the senator's assertion, Governor Pilate had recognized the purely local nature of the case, and had simply declared it outside of his jurisdiction. The Imperial Spokesman hoped that the Senator from Idajo would accept the qualifying facts brought forward by the government, and with their aid bring his conception into concordance with justice and truth.

As B. Taurus Celogus seated himself, sly chuckles at Senator Bora's discomfiture arose from the members whose sleep had been disturbed. The Senator from Idajo, however, retained the floor.



'I cannot,' he said, 'follow the recommendation of the Imperial Spokesman in view of the fact that the imperial governor of Judea, according to authentic reports, had the agitator in question scourged, crowned with thorns, clothed in a purple garment, and insulted by a detail of soldiers from the troop attached to his headquarters, previous to "declaring the case outside his jurisdiction." '

B. Taurus Celogus rose again.

'That phase of the affair is covered in a separate section of the report,' he said, 'for the very good reason that it has really no connection with the subject of this discussion. The fact is that the agitator in question was chastised because of his disregard of the etiquette prescribed for those brought before imperial colonial officials.'

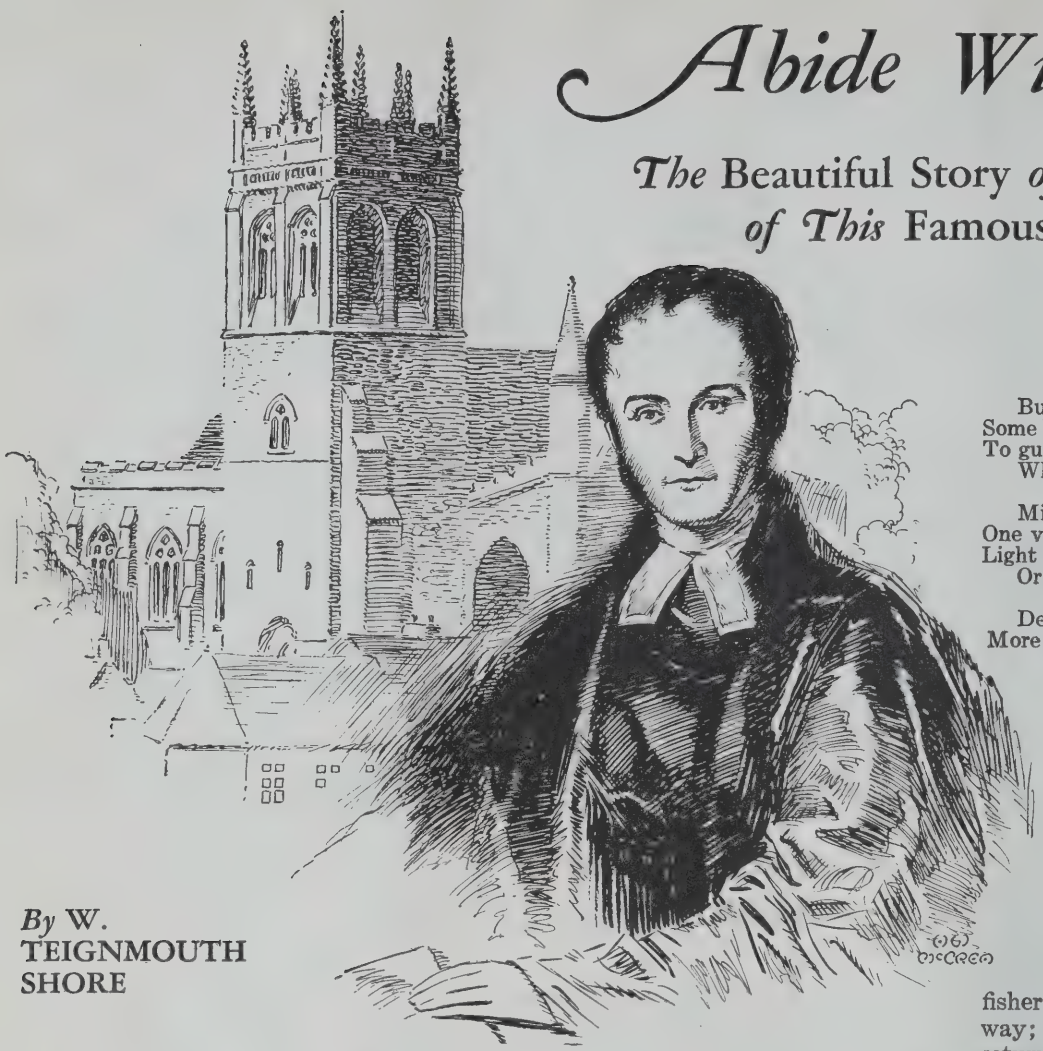
The Senator from Idajo still held the floor.

'That does not sound altogether plausible to me,' he asserted, 'in view of the fact that reliable witnesses declare troops from the governor's headquarters to have performed the arrest of the Galilean agitator, and afterward to have guarded him during his examinations before the Jewish high priest Caiaphas, the overseer of Galilee Herod and Governor Pilate, and also during the journeyings which these examinations necessitated.'

B. Taurus Celogus rose once more. (*Continued on page 18*)

Abide With Me

The Beautiful Story of the Writing of This Famous Hymn



By W. TEIGNMOUTH SHORE

IT WAS lately my pleasure and profit to have a long talk with the great-grandson of the writer of this most famous hymn. He showed me the first manuscript of 'Abide With Me,' here reproduced; written in a neat, clear handwriting on two sides of a sheet of writing paper. It was the last hymn composed by the Reverend Henry Francis Lyte, who was the first vicar of the church of All Saints, Lower Brixham, in Devonshire, not far from Torquay, and between the sea and the wind-whipped heights of Dartmoor.

Before I tell you the story of the writing of the hymn, I ask you to read carefully the manuscript. It is not, as it usually is taken to be, a hymn of departing day; it is a hymn of the evening of life, the end of our days, and was written by the poet some six weeks before his death, which followed a long and painful illness. It was not consumption, as is sometimes asserted, but asthma. Comparing the manuscript with the hymn as now generally printed, it will be seen that there are some variations; as for example: in the second line the word 'thickens' has been changed to 'deepens,' which does not seem to me to be so expressive; and the first line of the last verse is 'Hold "then" thy cross,' now it is 'thou,' instead of 'then.' In a corner of the paper I found in the author's handwriting, jotted down in pencil, 'Cant. 2:17.' This gives the source of the inspiration of the last words of the last line but one of the hymn, the text referred to reading, 'Until the day break, and the shadows flee away.'

Some eight years before his death Lyte wrote a poem, which proved to be pathetically prophetic and which is in itself so beautiful as to be well worth quoting, especially as it is so little known:

Declining Days

I would not be the wave
That swells and ripples up to yonder shore,
That drives impulsive on, the wild wind's slave,
And breaks, and is no more.

I would not be the breeze
That murmurs by me in its viewless play,
Bends the light grass, and flutters in the trees,
And sighs and flits away.

No! not like wave or wind
Be my career across the earthly scene;
To come and go, and leave no trace behind
To say that I have been.

I want not vulgar fame—
I seek not to survive in brass or stone;
Hearts may not kindle when they hear my name,
Nor tears my value own.

But might I leave behind
Some blessing for my fellows, some fair trust
To guide, to cheer, to elevate my kind
When I was in the dust.

Might verse of mine inspire
One virtuous aim, one high resolve impart;
Light in one drooping soul a hallowed fire,
Or bind one broken heart.

Death would be sweeter then,
More calm my slumber 'neath the silent sod;
Might I thus live to bless my fellow-men
Or glorify my God!

O Thou! whose touch can lend
Life to the dead, Thy quickening grace supply;
And grant me, swanlike, my last breath to spend
In song that may not die!

And it was so granted to him:

For a quarter of a century he worked hard among the fisher folk at Brixham; his health gave way; and after two winters abroad, he returned, in 1847, a dying man.

Brixham stands by the sea; an old-world little town, perched upon the hillside; one of the most beautiful spots in a most lovely part of England. Half-a-mile away from the town, upon a prominent foreland, is Berry Hill House, where Lyte dwelt and which was given to him by William IV. The little harbor is frequented by trawlers, and is the gathering place of innumerable white-winged gulls. Often the sea, over which there are glorious views, is bathed in color, the reflection of the sunset behind the heights of Dartmoor.

It was evident that the Reverend Mr. Lyte could not face the coming winter and must again seek a kinder clime; his departure for the South of France was fixed for Monday, September the fifth. On Sunday morning he told his wife and children that he would once again preach in his church; a 'farewell' sermon, he called it—and so it proved to be. They tried to dissuade him, saying that his strength would not permit, or rather his weakness, but he was firm-fixed in his intention. So, for the last time, he spoke and administered the Holy Sacrament to the fisherfolk he loved so well and who held him in their hearts. This tall, worn, sweet-faced man, who had served them so well. There was breathless silence and profound

Straightening Out the ALIEN Tangle

A Chat With the Chairman of the Committee on Immigration and Naturalization

By MARIAN BRUCE CLARK

AMENDMENTS to both the Immigration and Naturalization laws which a few years ago would have been considered revolutionary are being considered,' said Representative Albert Johnson, chairman of the powerful Immigration and Naturalization Committee of the House, 'but none of this important legislation can be reached at the present session of Congress. There are now before Congress some one hundred bills affecting immigration ranging in their demands from the removal of all restraints to the registration of all aliens, and a strong effort is being made to repeal the "national origin" section of the present quota law in its entirety.

'The national-origin section provides that the present quota allotment, based upon two per cent of each nationality in this country in 1890, shall expire July 1, 1927, when it shall be replaced by quotas based upon the national origin of the population of continental United States in 1920. This would reduce the present maximum admissions from 164,667 as now fixed to 150,000 after July 1, and would operate to increase the quotas from Great Britain and Northern Ireland by eighty-five per cent and to reduce admissions from Germany, Irish Free State, the Scandinavian countries as well as some of the Balkan States by about seventy-five per cent below their present allotment.

IT WILL be seen, therefore, that the greatest reductions would occur in the quotas of the Anglo-Saxon race from Germany, Irish Free State and the Scandinavian peninsula. To overcome this defect and minimize the danger of such drastic exclusion of an assimilable people, the Immigration Committee proposes the enaction of a discretionary clause permitting the admission of a "requested" allotment, restricted to the particular countries mentioned, irrespective of quota allowances and based upon agricultural, employment and development needs of the nation. Such admissions would be limited to sixty-six per cent of the established quota allotment in any one year and, in connection with the adoption of the national-origin quota as of 1920, should it become a law, would go far toward eliminating that racial dissatisfaction which, with the inaction of the present law, led to widespread charges of discrimination in favor of the so-called Nordic races.

'The law requires that the President shall announce the national origin quotas by April 1, 1927, failing which the present law shall remain in effect for another year. The committee composed of the Secretaries of State, Commerce and Labor has, however, met with almost insurmountable difficulty in calculating true percentages owing to the absence of immigration statistics prior to 1850 and, for this reason alone, it will be a practical impossibility to adopt a new quota this year irrespective of the constantly growing opposition from Irish, German and Scandinavian nationals and their descendants already here.

THERE are in the United States today approximately one million men who had effected illegal entrance to the country prior to July 1, 1924, and who because of their inability to prove regular admission are, in truth, men without a country. The overwhelming majority of these have already proved their worth to the nation. Thousands are taxpayers, exemplary residents and parents of natural-born Americans, virtually bound to the country by ties of blood. An innovation in naturalization legislation is in process of completion by the Immigration and Naturalization Committee which would enfranchise this large percentage of our adult population by an amendment providing for:

1. A formal declaration of arrival.
2. Payment of the head tax in lieu of a fine.
3. Automatic naturalization upon declaration of intention and compliance with the above provisions.

'Such an amendment would at once correct an inequitable situation and at the same time satisfy the law, since no benefit may now accrue to the United States by withholding the franchise from this law-abiding element of the population who are under no circumstances subject to deportation; whose primary infraction of law has been nullified by the statute of limitations; and who have already been penalized by long years of political ostracism.

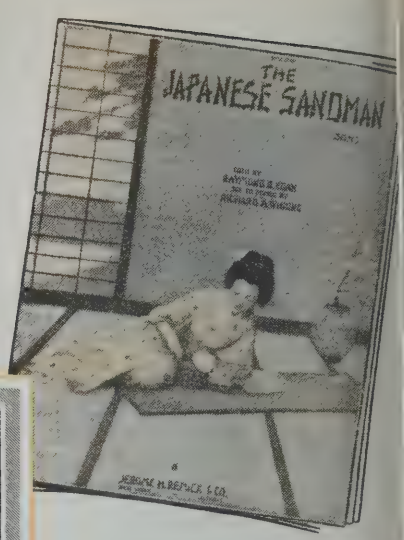
'Action upon this measure must, however, be delayed pending the passage of the Deportation Act now before Congress which extends the time limit under which deportation may be effected from five to seven years, and provides for deportation of criminals upon conviction thus saving the commonwealth expensive maintenance charges during long terms of imprisonment. This bill has already passed the House but is apparently encountering obstructive tactics in the Senate. The measure confers adequate jurisdiction upon the Immigration Court for final disposition of cases, thus relieving congestion on calendars and hastening departmental procedure. Since there are now some twenty-five thousand alien criminals included among the million irregular entrants whom it is proposed to enfranchise, it is obvious that the Committee will withhold action upon the naturalization amendment until the deportation act has been passed. It is in this connection that the value of registration of aliens would be demonstrated as an infallible means of detecting and apprehending illegal entrants, providing at once a safeguard to the legitimate immigrant and an effective obstacle to the smuggled alien.

THE Immigration and Naturalization Committee is in favor of providing preferential admission to wives and minor children of all United States citizens, *including natural-born Asiatics*,' continued Chairman Johnson, *'but only within quota provisions.* It has been the experience of the Committee that any slightest relaxation has been followed at once by subversive activities intended immediately to weaken the law and eventually to break down all restrictive provisions. Ample evidence of the constant assaults that are being made upon immigration laws by radical groups seeking to impose their will upon the nation is furnished by the multitude of bills now before Congress seeking to abrogate the quota law in favor of not only wives and children, but mothers and fathers, grandparents, and relatives of lesser degrees of kindred, as well as fiancés.

'Mexican immigration must also receive the early attention of the Committee, but anticipated objections from the State Department at this time may somewhat delay this action. There can be no doubt, however, that both Mexico and Canada would welcome any tightening of our laws which would operate to keep their national labor within their own borders, but our combined efforts cannot approximately complete this program during the present session of Congress.'

He Never Wrote a 'SHADY' SONG—and Never Will

By NORMAN BEASLEY



HERE is a fellow who has made a success of popular songs—a world success with one—and has written nothing but clean stuff.

The song—'Till We Meet Again.'

The composer—Richard A. Whiting.

The publisher's records on this song show that more than six million copies have been sold; in addition, more than three million phonograph records of it have been made. The strange part of it is that the lyrics and the melody were shuffled around for more than a year prior to production—shuffled around largely because Whiting didn't care a great deal about the composition.

As he tells it:

'Raymond Egan wrote the lyrics and gave them to me. I developed a melody but neither of us could get a title. Finally Egan suggested "*Auf Wiedersehen*" and we decided on that. Then along came the war and we translated the German words into their American meaning of "Till We Meet Again."

'I liked the idea—I will say that—but, at the same time I wasn't extremely worked up over it. I put the song in its finished, although drafted, form in my desk. "Future reference" was in my mind. Then, one day, one of the singers for the publishing house for which I was working came to me and said he wanted a war song.

'"What for?" I asked.

'"One of the Detroit theaters is conducting a song contest next week and I have been invited."

'"I haven't any war songs," I told him. "You know everything I've got, except—wait a minute," and I reached in my desk and pulled out the copy of "Till We Meet Again" and handed it to him. He looked it over, hummed the melody and became enthusiastic. "I'll try this," he said grinning, and went out of the office.

'The contest started on Monday night and after it was over the singer telephoned me saying:

'"The song is a knock-out. It received the greatest number of votes."

'That night, the song repeated as a vote catcher and on Wednesday captured the honors at the matinée as well as the evening performance. The following morning I went to the publisher and told him what had happened. He was skeptical, and said he didn't want to take the risk of printing the song. I pleaded with him and finally he agreed to print a few hundred copies. Those copies went off the music stands in a hurry and I went to New York to see our eastern representative. I played the song for him but he turned it down. Refused to order any copies. I felt pretty blue because I felt that a song, to be a hit, had to "go" in New York. When I returned to Detroit I learned that the demand had spread and a week or two later our Chicago representative reported that he couldn't fill his orders.

'From Chicago and from Detroit that song

Will the Democratic Nomination *Be Worth* Fighting For?

By a Member of the Press Gallery at Washington

IN A fit of anger James G. Blaine, then Secretary of State, once declared that no Republican would be so poor as to accept the nomination for President at the hands of his party in the coming convention, and that he himself wouldn't take it on a gold platter. His ire was aroused by the action of a Republican Senate in increasing high tariff duties to a still higher figure.

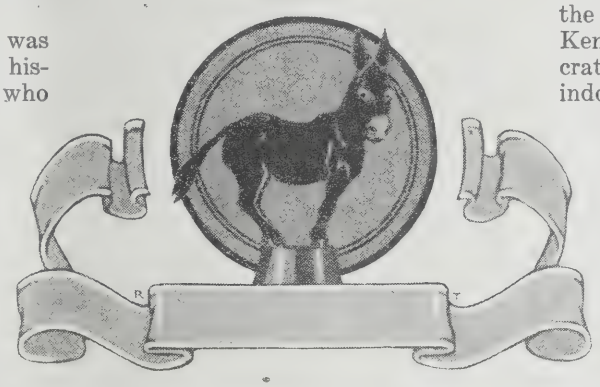
Mr. Blaine's augury of disaster was well founded, but that is ancient history. Today it is the Democrats who seem to be in the position Mr. Blaine described, so that only the Colonel Sellers' type of partisan and the congenital optimists can see a silver lining to the clouds. The internal conflict appears quite as irrepressible and as impervious to compromise as was the quarrel over slavery that brought ruin to the party in 1860, and that later strife over free silver coinage which led to three defeats under Bryan.

The present difficulties grow out of a moral issue as in 1860, only it is prohibition now instead of human slavery that is responsible for the schism. Wet Democrats in the Northeastern States look toward the South, knowing well that their traditional allies will fight to the last ditch against putting the standard of Democracy in the hands of a wet candidate, no matter who he may be.

THE most important of the Southern States, and the most powerful politically, is Texas, which is indisputably bone dry. It is overwhelmingly Democratic, it glories in its solidarity, and yet many thousands of its voters would go over to the Republicans rather than forsake their prohibition principles. The same adherence to party can be predicted as to all of the cotton-growing states, with the exception of North Carolina, and as to Tennessee the peril would be graver, for Tennessee, it will be recalled, gave its electoral support to Harding.

Considering the dominance of the drys in the South it may seem curious that this region has no favorite of its own under whom it would enlist with enthusiasm in the next quadrennial struggle. In 1920 and four years later its leaders buoyantly acclaimed W. G. McAdoo. He was their hope and pride at San Francisco and New York, but his erstwhile followers are no longer filled with any prospect of victory. Their champion, however, is not wholly in eclipse, and it is his persistence as a factor in the destinies of his party that complicates the outlook.

With a view of eliciting opinion from a high source inside the Democratic ranks the question that forms the caption of this article was fired point-blank at one of the acknowledged leaders, a veteran of national fame, the gist of whose reply ran in this wise:



'As matters are today it does not appear that the nomination will be worth fighting for, and the holding of a convention will be superfluous except to go through the regular forms and hold the organization together. Politics does occasionally produce some startling surprises, but it will require an amazing change of the popular mind to break Republican domination of the Government, especially if Mr. Coolidge is the candidate. A close study of the electoral figures reveals slight hope for our side. Of course, from the standpoint of the cheerful partisan prognosticator our candidate can get the necessary 266 votes that will put him in the White House with the greatest ease. He will figure it about like this: Virginia, Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, and Texas will furnish 136 votes, or just 100 short of the winning number. Then New York, New Jersey, Connecticut, and Massachusetts will swell that total to 220. On top of this the border states of Maryland, Kentucky, and Missouri will do their bit, augmenting the score to 259, to which Colorado and Arizona will cheerfully contribute 8 more, making a grand total of 277 or one more than is really required.

'It is a simple affair to elect our man on paper, but unfortunately the figures are based on hope rather than on the logic of the situation. Even if Governor Smith were running it is hard to visualize his success in the New England section, though to give him New York is sound reckoning, nor is it a wild prediction to add New Jersey. As to the border states the chances strongly favor the Republicans in two of the three, Kentucky and Missouri, if the Democratic nominee be a wet. Missouri has indorsed four Republican Chief Executives, Roosevelt, Taft, Harding and Coolidge, and Harding carried Kentucky in 1920. Maryland is pretty safe for the wet Democrats because of its liberal liquor views.

'But finally and worst of all is the southern prospect. The solidarity of that region is not proof against all kinds of provocation, and to name a northern wet or, as they term it in Dixie, a nullifier of the Constitution, would be provocation of the worst sort. Extreme partisans as are the Texans, 200,000 of their Democratic men and women in 1924 voted for the Republican gubernatorial candidate against Ma Ferguson. The loss of Oklahoma to the Democrats is much more to be feared since the party majority is considerably less and Oklahoma's population would easily respond to appeals based on matters of religion.

IF PRESENT conditions are any criterion the next race will not be close enough to prove interesting, paralleling in this respect the last two campaigns, but what else can be expected when Democrats are so miserably divided? Numerically they are the weaker party anyway, and when its major groups are rent by disunion the case is hopeless. Realizing their own lack of unity the delegates will assemble in the next National Convention in no buoyant temper, no amiable spirit, for the differences that separate them now will be intensified rather than modified by midsummer of 1928.'

This may be described as expert political diagnosis.

Whether the threatened split in the minority might not lead to a bolt and the putting out of two Democratic tickets, as in 1896, was also canvassed and the same authority declared that such an outcome was highly probable.

Transient Impressions of MEXICO

By WILLIAM L. STIDGER

THERE was a little boy standing on the curbstone in Mexico City selling papers. He was with his older brother, and could not have been more than five years old.

My friend, Bill Thomas the missionary, accosted the smiling little fellow, and, holding out a bright silver peso (half a dollar in our money), said, 'Can you change a peso for me, sir?'

I heard a peal of childish laughter, and turned from the shop window into which I was looking.

That child's face registered as keen an appreciation of a joke as I have ever seen in an adult. He was so amused at the American assuming that a Mexican boy could change a piece of money so big as that.

'That boy has a real sense of humor,' I said to my friend.

'They all have. It's a characteristic of the race, from childhood to old age. They certainly have a keen sense of humor.'

IF I live for a hundred years and see faces of children of every race and color, no single face and no mass of childish faces shall ever obscure that of the ingenuous laughing Mexican newsboy. It was refreshingly amusing that the tot could see a joke though only five years old.

Another time I talked with a pulque gatherer. He was a man of the more humble class who go about each day with a large bag made of the skin of a pig or goat on their shoulders. (In collecting the juice from the pulque, the native inserts a tube in the plant and by making a vacuum with his lips draws the juice into the skin.)

I said to this man, through an interpreter, 'How much of that stuff would you have to drink until you got to where, when you went home, you wouldn't be afraid of your wife?'

He looked at me, with simple candor in his eyes, and said, 'Why should one ever be afraid of his wife?'

There isn't any such condition in Mexican social life. The Mexican woman is humble, obedient, and servile before her husband. He is a dominating fellow and he makes his womenfolk stand around. The women are accustomed to this, and take it as a matter of course.

There is more of a respect of child for parent than we have in our own country. The Mexican or Spanish boy never thinks of coming into the house or going out of it without kissing his mother as a mark of respect. It is beautiful to see the reverence of a son for his mother.

One of the customs, manifest on every street of every city and village in Mexico, is that of the Mexican wife bringing her husband's dinner to him, and then sitting down under a friendly tree to eat with him. No wife ever thinks of eating alone. She laughs, chats, and smokes with her husband in perfect comradeship.

There are thieves in Mexico. No one doubts that. They will steal anything that is loose. Even the couplings of a railroad car are not safe overnight. Every brakeman is held responsible for bringing in the rubber air brake hose when he leaves his train. If he does not it will be gone in the morning. Poor people steal these rubber connections out of which to make shoes. Automobile tires serve the same purpose.

Whenever there is an auto smashup one will see a policeman watching the wreck until it is removed, which is often not for several days. Guard is kept on the car night and day or every removable piece of it would be stolen, even if it were on the main street of Mexico City.

I talked with one American merchant who had two thousand shoes stolen one night, in spite of the fact that he had two guards on the job. He later learned that the guards had done the thieving and he was desperately trying to find an honest man in Mexico so that he could protect his goods. He had long since given up any hope of getting protection from the police department, he said.

But the Mexicans are about the most friendly and hospitable people I have met with on the face of the earth.

'Good morning. How may I serve you?' is the equivalent of their greeting, and 'Goodby. May God protect you!' is the spirit of their farewell to you.

A well-dressed Mexican will go five squares out of his way to see that you find the right direction to a certain location. It is a universal trait, one of service, kindness and courtesy.

Yet they are passionate, hot, and deadly in anger.

I saw two taxi-drivers fighting. Each ripped something from his car for a weapon. One had a number plate, the other, a long wrench, and they fought to kill. There was no doubt of that. A policeman stopped them but both were taken to the hospital seriously wounded.

It is a curious sight to see a Mexican army on the move. The whole family goes along. I saw one man who ha eight in his party. They live on to and inside of box cars, cooking thei meals en route.

One morning I went through one o the central Mexican Government rail way stations and a troop train wa there. There were about ten box car and they were literally swarming wit women and children, on top of the cars inside, and in between. I was told that it was a troop train but I couldn't see a soldier, for the camp followers hid all uniformed men. There were surely twice as many women and children as soldiers. The Mexican soldier will not go without his family.

A digger who had been employed by Professor William Nevin, the archeologist, had deserted from the army. It seemed that when the Carranza army ran into a group of Zapastists this man disappeared.

HE was apprehended and sentenced to die. The appeal came to Professor Nevin, who called some friends and they went to see the officials.

After some parley the professor said, 'How much will it cost to get José off from this sentence? I don't want you to lose anything by having to arrest him and everything like that.'

After some further talk it was decided that ten pesos would be a reasonable fee and that José might be released from the death penalty if some kind friend would advance that much. Professor Nevin was the kind friend. He saved José's life.

I have told this story because it sums up several Mexican characteristics, not the least interesting of which is the small value placed on a human life.

I do not say that the Mexican is either good or bad.

I know that he is hot and passionate, as a lover; but I also know that he is faithful and kindly as a husband and a father and that there exists between man and wife in Mexico as fine a comradeship as I have ever seen.

I know that he is selfish in his position as commander-in-chief of the home and that the woman is servile in his presence, but I also know that he will starve before he will allow his children to go hungry.

I know that he is dangerous when he is angry but I also know that in his heart of hearts he is genuinely religious.

Down yonder in Mexico there are not only gold, silver, and gems, but there is the never-failing interest of comedy and tragedy, smiles and romance. There is not another country like it in the world. It is a romantic blend of the old and the new.

We Learn to PLAY by Watching

By H. G. SALSINGER

FOR years the United States has been accused of being lazy. It is, according to popular belief, a coun- whose people hate to exercise and o would much rather sit and watch ers do the exercising, a country that s in for sport, but merely as specta- s.

Those who advance this opinion k it up with newspapers and box- ce figures. They will show you that nething like 15,000,000 people paid see football games last season, that ,000,000 and more people watched jor league baseball and several llion more attended minor league nes, that 9,000,000 or more attended xing matches, a few million followed f matches, and that other sports ed several million more spectators.

They will point to the newspapers d call your attention to the sports ges. Here the reading matter deals h a select few. The stories in these wspapers concern a limited number athletes and a limited number of ms. Consequently, the man who intains that we are growing soft and generating is convinced that he has nclusive evidence to back his asser- n.

N A measure the contentions are rrect. It is true that we have been ending more and more money at the x offices. Attendance in all sports has creased tremendously, especially in e last few years. Millions watch the ented professionals and amateurs t, at the same time, an increased mber of men, women and children ve started to engage in sports them- ves.

Every two years the Department Commerce takes a census of the nufacturers of sports goods. The port for 1925 was recently issued. shows that the factory wholesale lue of sports goods manufactured in 25 was $42,569,278. This amount fers to such products as boxing ves, punching bags, dumb-bells, ercising machines and other gymna- m equipment; baseball, football, ckey, basketball, tennis, golf and lo goods; fishing tackle, clay-pigeon ps, decoys, skates, snowshoes, to- boggans, et cetera. The manufacture of firearms and ammunition is not included.

The value of athletic and sporting goods manufactured in 1925 shows an increase of 7.5 over that manufactured in 1923 and the census this year will show an even higher increase over 1925.

No attempt is made to estimate the amount of money spent on sports in the United States. It is millions over the manufacturers' figures on goods alone. Club fees, transportation and other items enter into the account and no one can come near a definite figure.

AS MORE people become interested in sports from a competitive angle, the size of paid attendance will naturally increase. A man who plays baseball becomes interested in seeing the men who play it better than anyone else. Those who play tennis want to see the best players perform.

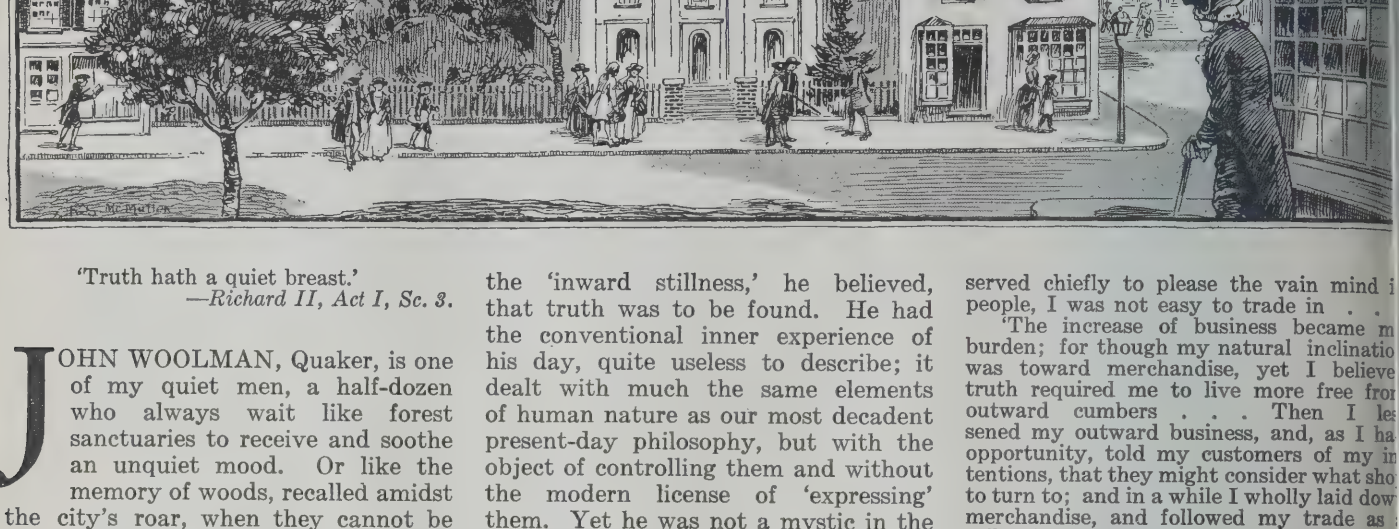
Golf drew more people to its leading two tournaments, the National Open and the National Amateur, in 1926, than in any previous year but on the date when nearly 15,000 spectators paid for the privilege of seeing George Von Elm dethrone Bobby Jones as the amateur champion at Baltusrol last September a few million other men and women were playing golf on several hundred courses in the United States. On the following morning the newspapers carried columns that told the story of Von Elm's triumph but not a line was devoted to the few million others who played on the same day.

Newspapers deal only with the headliners of sports. It is obvious why they are limited to headliners. There is not enough print paper manufactured in a year to deal adequately with the sports activities of the millions in a single day.

Little space is given to basketball in the columns of the newspapers and still there are thousands of teams playing every day from the beginning of autumn until spring is on its way. Indiana alone has 781 school teams. There are many amateur and semi-professional hockey teams, but the headlines go to the crack college and the professional teams. It is estimated that more than 3,000,000 people play golf, with the number increasing rapidly. At least 1,000,000 play tennis. Soccer, a comparatively new game, at least in most sections of the country, has more than 250,000 players in the United States. Last season there were nearly 350,000 school and college football players. More than 5,000 competitors tried for honors at the last Pennsylvania Relay Games and more than 7,000 were in competition at one New York school meet. Swimming has thousands who prefer it to any other sport. Handball is still one of the most popular pastimes. Rowing and sailing in summer, skiing and skating in winter, are being indulged in more frequently and by more patrons than at any previous time.

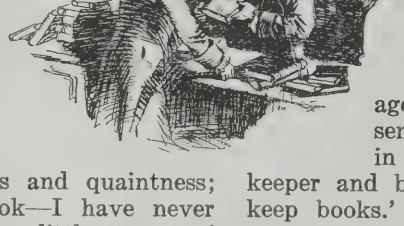
THE newspaper headlines have been only for the few. The attendance figures have mounted to proportions unbelievable twenty or even ten years ago. But the widespread publicity has had its reaction and this is shown on the fields of play. While the attendance at each important sport event showed an increase, this advancing interest developed what may be called a desire for self-expression. Having watched others perform, the spectators developed a desire to perform themselves. While the names of these millions do not creep into the headlines, or in the type beneath the headlines, we venture to say that they get a great deal more fun out of sports than the crack amateurs and professionals for whom the ballyhoo is sounded.

A Quiet Shelf Man



'Truth hath a quiet breast.'
—*Richard II, Act I, Sc. 3.*

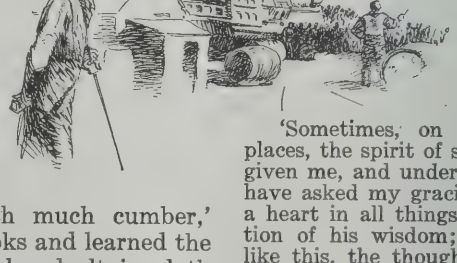
JOHN WOOLMAN, Quaker, is one of my quiet men, a half-dozen who always wait like forest sanctuaries to receive and soothe an unquiet mood. Or like the memory of woods, recalled amidst the city's roar, when they cannot be reached. And he has this quality, that one need not read him as a daily remembrancer, to renew the flavor of his influence. One makes his acquaintance once for all in *The Journal of John Woolman*, and the man stands firm thereafter, a fountain of quiet in one's private memory. He was not in any sense a man of letters, yet he produced a classic, full of Quaker quietness and quaintness; not a quotable book—I have never seen it quoted; it is a little stream of silence and peace which once bathed in refreshes the mind with something that remains.



'Get the writings of John Woolman by heart,' said Charles Lamb; I can endorse the suggestion if we underscore *by heart;* it is the only way to get them. Tonight, while running over the *Journal* again, I see for the first time how easily the head might be vexed were it set on to judge the matter. My heart was chilled for an instant by imagining what a cleverly malicious opposing counsel could do with the *Journal* as a document. And I was further shaken by realizing that John Woolman's own life, in which he achieved the secret of quietness, was not so outwardly quiet as I had fancied. However, I might have known that; fussy folk are usually sheltered ones, while quietness is hammered out on the anvil of the world.

It was in John Woolman's mind from the first to master the technique of quietness because it was only in the 'inward stillness,' he believed, that truth was to be found. He had the conventional inner experience of his day, quite useless to describe; it dealt with much the same elements of human nature as our most decadent present-day philosophy, but with the object of controlling them and without the modern license of 'expressing' them. Yet he was not a mystic in the stricter sense and he developed no system. My wonder grows to find how great was his preoccupation with the outer world, the world of custom and events. He did not withdraw from the passing scene; he only withdrew its right to master him.

'Being now in the twenty-first year of my age, with my father's consent I engaged with a man, in much business as a shopkeeper and baker, to tend shop and keep books.' John Woolman would never have said that his real work was thinking and that he only tended shop and kept books to pay expenses. No; being in business, *that* was his field. 'About the twenty-third year of my age . . . I felt renewed engagements that in all things I might act on an inward principle of virtue, and pursue worldly business no further than as truth opened my way.' But John, 'perceiving merchandise to be attended with much cumber,' left the shop and books and learned the trade of tailor; he also dealt in cloth and trimmings in a small way on the side. Apparently he was a good business man—true prophets usually are—but the business he wanted was a *good* business in quite another sense.



'It had been my general practice to buy and sell things really useful. Things that served chiefly to please the vain mind i people, I was not easy to trade in . .

'The increase of business became m burden; for though my natural inclinatio was toward merchandise, yet I believe truth required me to live more free fro outward cumbers . . . Then I le sened my outward business, and, as I ha opportunity, told my customers of my in tentions, that they might consider what sho to turn to; and in a while I wholly laid dow merchandise, and followed my trade as tailor by myself . . .

'In merchandise it is the custom wher I lived to sell chiefly on credit, and poo people often get in debt; when payment i expected, not having wherewith to pay, thei creditors often sue for it at law. Havin frequently observed occurrences of thi kind, I found it good for me to advise poo people to take such goods as were mos useful, and not costly . . .

'Though trading in things useful is a honest employ, yet through the great num bers of superfluities that are bought an sold, and through the corruption of th times, they who apply to merchandise for a living have great need to be well experience in that precept . . . "Seekest thou great things for thyself? Seek them not."

A highly cultivated and inquiring conscience is a clamorous thing, certainly not by itself a source of quietness, and this was the sort of conscience John Woolman's was. If he could not sell gewgaws to the poor because it was a waste of their money and the producer's labor, neither could he deck himself with them. Even the question of dyeing fabrics came under his moral scrutiny.

'Sometimes, on retiring into private places, the spirit of supplication hath being given me, and under a heavenly covering I have asked my gracious Father to give me a heart in all things resigned to the direction of his wisdom; in uttering language like this, the thought of my wearing hats and garments dyed with a dye hurtful to them, has made lasting impressions on me.

Abate your smile, please; you do not yet know John Woolman. Doubtless he was right in saying that dye *does* conceal dirt; it *does* conceal shoddy quality; it *does*

Camel-Swallowers

MEN 'strain at gnats and swallow camels.' At the present day the country is full of camel-swallowers, of people who make no end of a fuss about petty things and allow things that really matter to pass unnoticed. It has been said that small minds are only capable of taking notice of small things. They cannot grasp things that are worth while. A child is content with a toy that one of more mature years would discard. Trifles are magnified into treasures and mountains made into molehills.

No doubt men strain at gnats because gnats are about the only things they can comprehend. The camel is more in their line to swallow because it is so big that they cannot see it. It escapes their notice owing to its very bulk. The vastness of its shadow dulls their faculties and therefore it disappears in the obscurity of their mentality before they are aware of the fact. But little things? Oh, little things are a different matter. Little things can be threatened and bullied and made a fuss about, and held up to scorn, and not allowed to get past on any account. They are looked at through the magnifying glasses of ignorance and prejudice, and are held up in the light of muddleheadedness.

The gnat is a thing to be bullied and resisted, the camel is a different story. One is afraid of a camel because it may kick or bite if it does not get its own way. Therefore it gets its own way. It is allowed to get by.

Camel-swallowing may be called by another name—lack of judgment. It is the want of the power to discriminate. This is where a good many otherwise intelligent men fall down. They cannot tell the difference between a mountain and a molehill.

Many people are unable to discern the small black patch in the clear sky that denotes the approach of a storm, they cannot tell from the small fragment of azure on a lowering sky that better weather is at hand. They are deaf and blind alike to the signs that nature has provided for the guidance of mankind. They are deaf and blind to the signs of the times. Their perception is dulled and their discernment is obscured.

Why is it that men cannot learn the lesson of the things that matter? A school for teaching the things that matter would be a benefit to the whole nation. A Professor of Things that Matter would be a good substitute in many of our colleges for the swarms of professors of things that don't matter the flick of a fly's wing. Let us think of bigger things and swallow them if we will, but see that we digest them properly.

But there are big ideas and little ideas. It is a common thing to hear people say, 'What is the big idea?' This has become the tritest of trite questions, but it is a question that has been put all through the centuries. Most of the world's inhabitants put it to Noah when he started to build the ark. They thought the patriarch had become mentally dumb. But he went on with the building just the same. If he had been planning a canoe or a dugout their comprehension would have been clear, but the ark was too much for them.

This big idea was a sound idea. It was an inspiration which the small minds of the critics could not understand. It was beyond the limit the camel-swallowers could go, therefore in their confusion and mystification they condemned it.

It is this inability to discern the difference between what is small and what is great that clouds the mentality of legislators and politicians. They will swallow a costly scheme because it comes within the limits of their understanding, but because they lack sufficient foresight to appraise its possibilities, good or bad, the result is frequently disastrous. On the other hand, politicians will paw the air and bark at the moon when something that is of real merit and utility is brought forward for their endorsement. The cost to the country may be little, and, strange as it may seem, this is the very reason why they cannot comprehend it.

The mere fact of its being a big benefit at little cost raises their suspicions. They immediately start raising obstacles. Once having intrenched themselves against the scheme they strain every effort to oppose it. Their entire efforts are shortsighted and illogical. So shortsighted in fact that they cannot see how illogical they really are.

What is wanted is an impartial vision that will see things as they are. Then there is a chance of making them as one would like to have them.

COMPARATIVELY few are able to pick out the things that matter and discard the things that don't. Some will make a fuss about little things and allow big things to pass without a murmur. It is such individuals that Scripture refers to as straining at gnats and swallowing camels. Nations as well as individuals are led into committing costly mistakes through failure to judge between that which is essential and that which is not. A sense of proportion must be an element in the formation of sound judgment, but foresight and restraint are equally necessary when decisions have been arrived at if they are to be made effective.

No Bolshevist Would Dare

NO BOLSHEVIST plot ever did to the United States what the David Reed of Pennsylvania-Phipps-Moses filibuster in the closing hours of the Senate did. No Bolshevist plot ever could. It is incredible that the American people would ever allow Bolshevists to gain sufficient power in this country to interfere with the functions of orderly government. *Yet a little group of politically motivated Senators arrogantly assume to themselves that power, and proceed to wreck the machinery of government with as little concern as though they were blood-brothers of Trotsky in Russia.*

The David Reed-Phipps-Moses filibuster accomplished its primary purpose: It saved Bill Vare of Philadelphia the embarrassment of having his ballot boxes opened. In *that* it was an outstanding success. The will of the Senate unquestionably was that its special committee should continue the investigation. It was ready to vote funds for that purpose. *But the vote was not allowed.* The will of the Senate —and of the nation—was successfully and effectively thwarted by Messrs. David Reed, Phipps and Moses.

Suppose (just for the sake of equitable comparison) that Emma Goldman, Alexander Berkman and Bill Haywood should presume to forbid the United States from inquiring into the slush-fund election of Mr. Vare! Such a wave of protest would sweep the nation as to make it highly advisable for them to jump the country at the earliest opportunity! But suppose further that they should attempt to do the *other* things the Reed of Pennsylvania filibuster accomplished:

> Suppose they should tell the courts of the United States Government they could no longer function.
>
> Suppose they should tell a half-million veterans of American wars, many of them maimed and blind, and most of them dependent upon their Government pensions for livelihood, that they could not have those pensions for two months.
>
> Suppose they should tell the United States Veterans' Bureau that it would have to cease making bonus loans to World War veterans, despite laws to the contrary.
>
> Suppose they should tell the United States Army it could not have sufficient funds for pay and maintenance of its soldiers, and would either have to dismiss 30,000 of its 112,000 troops, or make other provision for them.

Supposition is, of course, futile. Whatever their personal desires, it is inconceivable that even the veriest Reds would have the temerity to make such demands, much less put them into effect.

Yet in blocking the Vare investigation, the Senator from Pennsylvania and his comrades did those very things, and more. Their filibuster, preventing as it did the passage of the Deficiency Appropriations Bill, virtually disrupted the chief functions of government. It is useless for David Reed to plead that it was unintentional. The action was his; and the responsibility is his.

The situation is without parallel in the history of the United States. Federal courts throughout the land are suspending for lack of funds. There is no money to pay for juries. Men accused of crimes have the alternative of pleading guilty or of remaining in jail for months until the courts again begin to operate. The Army faces what is probably its greatest crisis since the war. The Navy must undertake serious curtailment. Farmers are denied even the most elemental Government aid—the loaning of money with which to purchase seed. The Government's building program is practically at a standstill. Men who risked their lives in defense of their country—and the dependents of those who *gave* their lives—are shunted pitilessly aside in the brazen attempt to railroad Bill Vare into the United States Senate. Funds are not even available to pay the expenses of the Marines assigned to guard the mails.

The price the country must pay for Mr. Vare exceeds even that high price Mr. Vare paid for his seat. Some day the people may realize that real danger to the nation lurks not so much in crackbrained theorists as in those politicians who carry the ethics of the ward into the Senate of the United States.

The Undesirables

A SURVEY of the Department of Labor shows that there are 111,673 aliens in jails, insane asylums, hospitals, poor houses and charitable institutions in the United States. In New York City alone there are 46,936 foreigners officially designated as 'undesirables.' The laws of the country specifically state that such persons shall be deported; yet the activities of certain racial lawyers and institutions have interfered so seriously that the number of undesirables is mounting rather than decreasing. A definite drive has at last been undertaken by the Government to rid the nation of all aliens, inmates of penal and public institutions. The movement has its pathetic features, but the blame rests squarely with those organizations which have so persistently flouted the immigration laws by helping into the country those who have no right to be here.

Gardens of Timber

WITHIN sixty or seventy years at most the Japanese will be cutting their own timber, and will no longer be dependent on importations. While the Western world is talking glibly of reforestation, and is preparing to get ready to begin, the foresters of Nippon are growing their own. And they are growing them as the Japanese grow vegetables—in patches that, for all their vastness, are nevertheless gardens. The Japanese have known the heavy burden entailed by an exhausted native lumber supply. They make no byplay of penitence, but are content to let practical measures speak for their sincerity.

To drive anywhere through the brown hills of Japan is to observe a singular regularity of aspect in the young pine groves that climb across the summits in the proper lanes of an Iowa cornfield. Many of the young forests are yet no higher than the thigh of the traveler who pauses to inspect them; others are comparable to a thrifty second-growth in America, but all alike are carefully tended and flourishing. A few native forests yet are standing in Japan, tall and venerable, but long ago the bulk of the timber was taken for the needs of a people who had never heard of applied forestry.

There are mountain sides in Japan, on which these forests have been planted, that are almost sheer, and to which a forester, with naught save Shanks' mare and his hands, could not hope to cling. Yet the young forest clothes these steeps with dark green, and the trees are arrayed as precisely as though rooted on level land. It is plain to see that men clung to ropes, lowered from vantage points, when they planted the trees.

Paper-paneled tea houses and homes are not constructed by the Japanese because they deem these best. In remote times the timber supply of Japan was brought to the verge of disappearance by wasteful policies not unlike those we have practised in America. Coniferous woods were native and plentiful, but the inability to see beyond the need of the moment stripped away the forests and left the hills naked and ashamed. Now the Japanese know better. And knowing, they have taken action.

The Most Potent Monopoly

THE New York Stock Exchange maintains the country's most potent and unassailable monopoly. If its board of governors reaches a decision in a dispute among its members, even though it be against the law of the land, the member dare not appeal to the courts, but must accept it in silence. If a Stock Exchange house fails, its debts to other members of the Exchange must first be liquidated before its customers can lay claim to its assets. Most curious of all is the fact that its memberships have not been increased since the early 1870's. They still stand at the number 1,100. In the last quarter of a century, the totals of shares traded in on the Exchange have more than quadrupled, but the number of seats remains the same. In consequence, the price of seats has jumped from $3,000 in 1869, to $185,000 at the present day. It is predicted that seats will soon command a price of $200,000, and this augury is amply supported by the steady growth of dealings on the Exchange. With a growing business and a restricted membership, it controls the trading in practically all the important securities in the country.

Perennially it is proposed to incorporate the Stock Exchange and thus bring it under the supervision of the New York State Banking Department. The latest of these proposals, introduced before the legislature at Albany, would exact a tax of $1,000 a seat, providing the state with an additional $1,100,000 in revenue each year. The London Stock Exchange is under government control. So are the bourses of Berlin and Paris. The New York Stock Exchange, however, remains virtually a financial club, responsible only to its members.

Segregating the Stage

NEW YORK has a criminals' deadline. Beyond a certain point in the city's financial district known criminals must not venture upon penalty of instant arrest or, possibly, of being shot. The plan has worked well in keeping one section, at least, comparatively free from lawlessness. Now comes Frank Craven, playwright and actor, with a proposal to apply a modification of the plan to the stage. 'If the authorities really wish to clean up the stage in New York,' he declares, 'there is a simple method of doing it. Let them order that all salacious shows shall be staged in theaters within a certain prescribed district. By keeping the dirty plays in that zone, theatergoers may know at once the nature of the offering they are to see there.'

Strike — You're Out — Maybe

IT MIGHT be an exaggeration to call the coal industry the most uneconomic in the United States. That is a broad honor, one open to dispute by any one of a half-dozen or more highly inefficient industries. But it can scarcely be an exaggeration to say that the coal industry has the most bungling leadership in the land.

The merits of the present strike in the bituminous fields are obscure to nine out of every ten persons. The public does not know whether the miners are right or whether the operators are right —and the public no longer cares. Of one thing only is the public sure: that in the end it will foot the bill. There is sufficient coal in the ground; there is sufficient labor to get it out of the ground; there is sufficient consumers' money to pay the miners an adequate wage and the operators an adequate profit. Yet the coal industry goes blundering along from strike to strike—while other industries and the nation as a whole suffer. Another deal is due in coal. New leaders are needed in an industry wherein relations between men and management must be adjusted, year after year, by disastrous strikes.

Does the BIBLE Predict Peace?

By LIEUTENANT COLONEL W. G. MacKENDRICK, D. S. O.

Author of *Destiny of Britain and America.*

SINCE the close of the Great War it has been most interesting to watch the world-wide cry sounded from village, town and city for peace—peace at any price, but real peace!

This cry is heard among all Anglo-Saxon peoples wherever they are gathered in Britain, the United States, Canada, Australia, and those waste places of the earth that Anglo-Saxondom has taken over.

It is a strange fact that this cry for peace is heard only in Anglo-Saxondom and does not afflict Germany, Italy, Turkey or Russia. It seems to be confined to those peaceable nations who never in their history have been prepared for war—nations who mostly have had to be kicked into their wars and who, blundering along, have finally won out on the field of battle in the last round and then usually lost their winnings when the politicians and international financiers took the places of the fighting men, as at the Treaty of Versailles.

THE question naturally arises, how comes it that all this peace propaganda occurs only among peoples who for one thousand years have been lovers of peace? Nations who never in their history have sought or started a war; peoples who while never seeking war have always won the wars into which they have been forced; peoples who have broken the back of every attempt of world despots who have endeavored to enslave the world age after age. One would think that this peace propaganda was necessary among the sword-rattling nations, but we do not find it there. Those nations that still hope to achieve greatness with the aid of their military machine—quite openly, as in the case of Russia; or covertly, as in the case of Germany—are not troubled with their women marching on Berlin, Rome, Angora or Moscow crying for no more war. But we do see that odd spectacle in Britain, the most peace-loving nation on earth, and in America also. Naturally, one wonders why.

A year ago Moscow sent out orders that all Communists in Anglo-Saxon countries should boost for disarmament and peace, and the reds in my home city joined the chorus which some of our parsons inaugurated for no more war, for peace and disarmament. Today Moscow is buying thousands of horses in western Canada which will be used against the British Empire and the United States in the impending war.

It is a strange spectacle to see paid ministers of religion in many of churches boosting for what that unho outfit in Russia demands—Christi men of God working along the lin demanded by those would-be annil lators of God and of all God's wor and of the Anglo-Saxon nations—the latter being the upholders of Christia ity in this world toda By so doing, these ministe are working absolutely direct opposition to Goo commands as laid down in t only authentic data we ha to go by, that is, the Bib

As most citizens des to live at peace both wi their neighbors and th neighboring nations, t Church following this stro predilection for peace those both in and outside its fold has lent itself large to all so-called peace mov ments.

THE Church represen the Prince of Peace. preachers of God's Wo feel that they are the na ural leaders of so-call peace movements, overloo ing the fact that in doing today they are coöperati with many of the most su versive elements in societ and are for disarmament a time when our Bib plainly bids us prepare f the greatest war and tim of trial that ever was land or sea.

A close perusal of t Bible shows that thre fourths of the Old Test ment and much of the Ne deals not with person salvation as the Chur teaches, but with nation questions.

Jehovah set up on ear His executive nation as t vehicle of His good purpo toward all mankind. J hovah called this nati Israel, which means 'ruli with God.' The Chur teaches that the Jews co prise this people of Isra The Bible teaches that God divorced t tribe of Judah (of whom the Jews for only a portion) and the tribe of Le from this Kingdom of Israel (*2 Chro* 11:1-4) and set them up with a separa charter as distinct from that of Isra as the North Pole is from the Sout

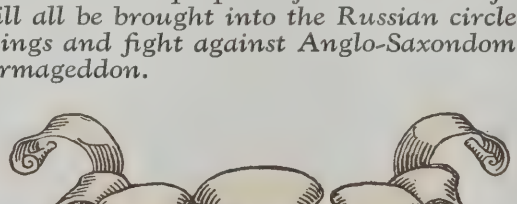
The Author Says:

DOES the Bible Predict Peace?

The answer is a definite No! There can be no world-wide peace for the next ten years. Students of Bible Prophecy may differ on some points, but I know of none who does not agree we are still in the era of war.

The late war was referred to by the press as Armageddon, but the late war was not Armageddon, a name given in Scripture to the last struggle in which the forces of international evil are finally to be destroyed. The Bible indicates that Armageddon has yet to be fought and won and learned men look for it between the years 1928 and 1936.

The Bible describes this last war as the Great day of God Almighty in which Jehovah, in an unmistakable manner, shows the nations of the earth that He rules on earth as in Heaven. The Chief Prince of Rosh (Russia) will under Prussian guidance head the thirteen nations who start to wipe Anglo-Saxondom off the face of this earth. China will be with Russia, also Persia, Turkestan, parts of India, Abyssinia and most of the Mohammedan peoples of Asia and Africa will all be brought into the Russian circle of things and fight against Anglo-Saxondom in Armageddon.



Jehovah predicted that His executive nation remodeled and minus Judah and Levi would be a blessing to all nations of the earth and would grow first into a nation, then into a great nation whose name would be great and then into a company or multitude of nations who would have command of the sea, and so on. God covenanted and ordained a place for them in the isles of the sea, north and west of Palestine, where he said he would plant them and he fulfilled this prediction in eight separate and distinct invasions of Israel into Britain under the name of Angles, Saxons, Danes, Jutes, Normans, et cetera, that is, into the Covenant Land. The word *Brith* in Hebrew is Covenant and the word *Ain* in Hebrew is land—Brit-ain is the Covenant Land, and Britain and her offspring nations (of which the United States of America was the first) fulfilled not one but all of the divine prophecies concerning Israel, not only today but down through the ages as predicted by the prophets. These people have done God's work of smashing despotism, never seeking war, barely prepared for war, but winning always.

SATAN using despotism again will within two years aim to take the mastery from God's executive nations, hence bolshevik Russia's world-wide work to raise Egypt, Turkey, Persia, India, Abyssinia, China and other countries against Anglo-Saxondom, and the Bible predicts that she will succeed in heading a heathen uprising and there will be great chaos in the earth. With the Bible forecast thus, should the Church work for disarmament, and talk of peace when there can be no peace on this earth until the things that must come to pass are accomplished?

The Jews have put across propaganda that they are Israel, 'the Chosen People,' though they do not fulfill one of the specifications laid down for the work that Israel was to do, while the Anglo-Saxon people fulfilled every one of them. The Jews are never spoken of in Scripture as the 'Chosen' while Israel always is. Judah is separate from Israel, as even Moses knew.

It is a serious error of the Church to assume that the Bible is a Book of Peace, as pacifists mean it, when even our Lord said, 'I come not to bring peace, but a sword,' and when it is clear that God appointed His chosen nation Israel as His battle-ax and weapons of war to smash the Babylonian nations of the earth until despotism is replaced by God's plan of ruling with truth, justice and love on earth, and this smashing—according to the prophets highly commended by our Lord—is the only possible prelude to universal peace. The reason we have no peace today is that the opposite of peace still exists in the world. Nowhere in the Bible does Jehovah advocate unpreparedness or disarmament for His People; on the contrary we read in *Luke* 11:21, 'The strong man armed keepeth his palace, his goods are in peace.'

I WAS among those who from the first predicted that the League of Nations would be a failure in either bringing in or preserving peace in Europe, because it conflicted with the League that the Creator of this world chose as 'His battle-ax and weapons of war' which He declared He would use to bring peace to this war-cursed planet. It is plainly set forth in the Bible that the great people and the nation and the company of nations, the Chosen People, Israel in the isles, would occupy world rule at this present day. It was foretold that the Great War would come and that the Israel Nation as God's battle-ax and weapons of war would win it and also redeem Jerusalem from the bloody hand of the Turk, as General Allenby did.

My study of the Bible was my authority for predicting the failure of the League of Nations' confederacy to bring in peace because it was set up in opposition to the God-appointed League and therefore must fail. In the *Destiny of Britain and America*, written in 1920, I foretold its failure as soon as the workers of iniquity got among the fifty-odd nations forming this confederacy or league.

THE BIBLE IS AN ANGLO-SAXON BOOK and foretells Anglo-Saxon destiny, and, strange as it may seem to those who learn of it for the first time, the destiny of Anglo-Saxondom is the destiny of the world. The Bible foretells the wars and the outcome of the wars and predicts what they will win just as they have down through the ages. I first learned this fact forty-four years ago and since that date I have watched Bible prophecy being turned into actual history before our eyes as detailed in the daily newspapers. It happened that a clerical friend of mine in 1879 predicted that in Britain's next war in Egypt, America would take part with Great Britain, as unlikely a prediction as could have been made, because in those days the politicians of the United States were twisting the lion's tail on all possible occasions and the Republic's rulers then were as opposed to taking any action in Europe as they have been since 1918.

Well, in 1882—just three years later—Britain and France decided to drive the Turk out of Egypt and sent their fleets to bombard and capture Alexandria. The admiral of the French fleet at the last minute sailed back to Toulon without firing a shot. The British fleet cleared decks and went into action. Four fourth-class American gunboats happened to be in the Mediterranean waters at that time and their Marines landed with the British Tars, capturing Alexandria. One of the American gunboats was in command of Captain Schley, afterward admiral in the Spanish War. Of course, they acted without instructions from Washington, but despite their rulers they helped do the job. My forebears were Scotch and the fact that a man could get out of the Bible news written three thousand years ahead of time, and could know the facts and predict the outcome, made an impression on my mind that forty-four years' study has proved to be true and accurate.

THE taking of Jerusalem by Lord Allenby was accurately described in the Bible three thousand years ago. It was foretold that the city would be taken by His Covenant People (*Brith* in Hebrew is Covenant and *Ish* in Hebrew is man) and it was the British who redeemed Jerusalem in 1917, the year predicted by Reverend Grattan Guinness in 1875 in *Light for the Latter Days*. Jehovah had said he would defend Jerusalem in this war and he did so defend it, and not a shot or shell struck Jerusalem. Jehovah foretold three thousand years ago that 'as birds flying He would defend Jerusalem' and Allenby's aerial fleet did the job—men flying like birds. The question arises, How did the inspired prophet foresee that in these latter days a new device just recently developed—the airplane—would be used by Jehovah's chosen battle-ax brigade in the taking of Jerusalem? The answer, of course, is that Jehovah knew and He spake by the mouths of the Holy Prophets which have been since the world began, which apparently was a long, long time before Moses. You may remember our Lord's, 'O, fools and slow of heart to believe all that the prophets have spoken.' The taking of Jerusalem was part of that 'all.' Jehovah through *Ezekiel* 25:14 referring to the redemption of Jerusalem at this time said, 'And I will lay my vengeance upon Edom (Turkey) by the hand of my people Israel.' They, the Brit-ish or Covenant People, did the job through Allenby and fulfilled this prophecy.

Well, for forty-four years I have seen hundreds of prophecies made good to the very letter. (*Continued on page 21*)

How We Played *in the* OLD TIMES

By JULIAN HAWTHORNE

IT SEEMS to me that I was playing all the time when I was a boy. The work I did was negligible—and often neglected, I guess; but play looms large in my memory between the years 1850 and 1870. It may be that young folk now have an idea that their grandparents were inclined to be serious; but I believe that children played on board the *Mayflower*, and all through witch times. Our development was not so one-sided as might be supposed. And the fact that our ancestry has produced the present generation, which I am assured is the finest that has ever issued from the loins of Time, proves that the old people must have lived well and profitably; and what is more profitable than play?

Work, unless it be regarded as an especially remunerative sort of play, is well known to be burdensome and debilitating. The Duke of Wellington said that Waterloo was won on Eton cricket-fields; and we might add that the Civil War was won by baseball men, except that our immortal game had not become general at that time. But we knew three-old-cat and hockey, and we waltzed and polkaed, and the drum, fife and jew's-harp were prevalent. When the first company of young Concord fellows left for battle in 1861, it was to the music of an indigenous band, assembled at a day's notice from the resources of the township; and the tune they played on that proud and tearful occasion was 'Yankee Doodle.' Have you heard it? It was a great tune, and did as much to put gumption into our boys as did the 'Star-Spangled Banner' itself.

No, we were not a sad-eyed and dyspeptic lot in the 1860's. We even did practical joking. The most successful fisherman that I knew in Concord was a farmer, a serious-looking man of about thirty. He would keep on hauling good perch and bream out of the river while I, a dozen yards away, wouldn't get a bite.

The edge of enjoyment stays keen, whereas that of excitement soon dulls.

'What bait do you use?' I asked him at length. He shook his head: it wasn't the bait so much, he said; fact is, it was a secret! He admitted that the angle at which you held the rod over the water might have something to do with it; and the color you painted your cork bob was important too. 'But I'll tell you, Julian, my boy,' he said at last, 'I was fishing one time long ago with an old chap who would catch ten fish while the rest of us were coming to the end of worms without so much as a smell. We clubbed together and raised ninety-eight cents and offered it to him if he'd tell us the game; but he said, no, he'd love to, but it was a recipe that had come down to him from his first ancestor on the *Mayflower*, and they all had to take an oath of secrecy on it.

There was swimming for boys, and for girls also under proper conditions.

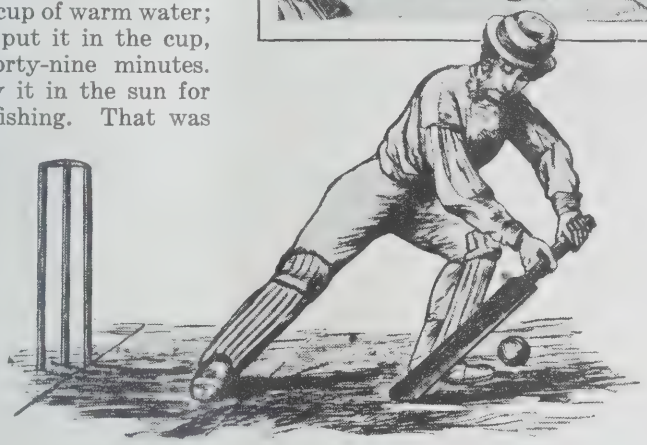
'But one day, when we was sitting one together right here, he was reach- g to pull in a pickerel, and he toppled er and down he went. I knew there as a deep place right there, and he uldn't swim, so I hopped in after m and brought him out, pickerel and l. When he came to, he thanked me, d said if I'd promise not to give it vay, he'd tell me something, so I omised—yes, sir, he up and told me e secret right then and there. But, u see, Julian, having promised, I n't feel it would be right to give it way, even to you.'

But when he saw how discouraged was, saying there was no use of my hing and never catching anything, he lented and opened the hidden cham- r of his soul. Like other great things, was simple. On returning home I as to take a handful of plain salt and ssolve it in a china cup of warm water; il up my fishline, put it in the cup, d let it stand forty-nine minutes. ake it out and dry it in the sun for e hour: then go fishing. That was l. 'But for the nd's sake don't t anybody know!' e added, as he athered up his ring of fish and alked away.

This is the first me I have re- ealed that secret the sixty-five ears since then. I as fourteen years d and had been in urope, but I believed him. I tested s recipe thoroughly; and that is all I re to say about it.

Before telling what we played at in y boyhood, it may be well to run over me of the things that were lacking in our environment for that purpose. What has the present young person of from twelve to twenty, say, at his or her disposal? Gocarts and whiz-wagons to drive at people's shins on the sidewalks, and the getting into, or under the wheels of, full-grown autos afterward. Jazz music and jazz dancing, associated with petting and necking parties.

The idea of 'championships' in baseball, tennis, or in any other outdoor sport, was hardly yet in the germ with us. What we played for, and had, was fun.



I don't say that there was no petting or necking in my time, but they were always private and personal enterprises, never gregarious. Kissing, too. A kiss given in public would lose its savor, but as we practised it, it had a tremendous kick, which we didn't readily get used to. And I incline to think that our plan was the better. I, for example, was very fond of girls, though much afraid of them; I can count on the fingers of one hand the number of them that I kissed before I was twenty, and even the kisses that I gave the few might easily be counted: so that when, afterward, I read the advice of Polonius to his son, Laertes, about not 'dulling the palm of entertainment,' I could appreciate its good sense.

Baseball and tennis. Our baseball at Sanborn's school was the 'Massachusetts' variety; the batter stood halfway between first and fourth bases, and was put out not by being touched with the ball in a player's hand, but by being hit with the ball on the throw. The balls were small rubber things, and hurt little if they did hit; the bats were not standardized, and the rules of the game not strict. The game had not yet been taken up by professionals; nines were actually made up of players who were inhabitants of the places

We had nothing but winter ice outdoors and skates bound to the feet with crisscrossed straps.

The Adventure of The Beautiful Things

By HUGH WALPOLE

Illustrated by W. W. CLARKE

AMONG the many episodes with which during this year I was concerned, this is, perhaps, the only shameful one. When I say shameful, I mean that I have still, looking back, scruples of conscience about it. From the esthetic point of view these scruples are unjustified; from the moral—well, I don't know. You shall judge for yourself. The case centers round Mrs. Hartington, who was a very remarkable woman. Her real name, of course, was not Hartington, but it is only her death, some six months ago, that enables me to tell this story. Even now her friends may perhaps recognize this account of her, and if they don't recognize her, they will possibly recognize her still more remarkable husband.

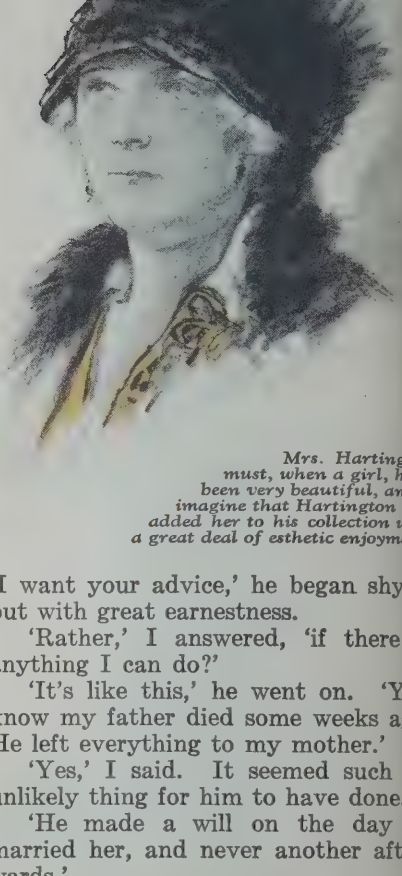
Charles Hartington died in the autumn of 1923. He had some business of some sort—what it was does not matter. He was never, I should fancy, very wealthy, but he had a passion for collecting beautiful things, and, with his exquisite taste, his very great knowledge, and the freedom that his business allowed him for travel, he managed to gather things around him as every man can manage if he really cares enough and has sufficient leisure. Cares! Charles Hartington did not, I suppose, care for anything else except his beautiful things. I saw him only once, when he was showing an aunt of mine over his house in Evelyn Gardens. I was with her. The things that he showed us were so lovely that I paid very little attention, I am afraid, to himself; but that is as he would have had it. He was like the voice of his possessions, and you felt that if they were not there he would not be there either. This question of the living and breathing vitality of concrete objects is acknowledged by some people and entirely denied by others; you either feel it or you don't. It is one of the really great divisions between people, and the exact essence of this division has never been better put, I imagine, than by Henry James in his exquisite *Spoils of Poynton*. I must ever apologize to that great man for this little ghost of his magnificent art.

David was a long, thin, shy man, very inarticulate, hiding deeply his feelings.

Hartington was not a collector of any especial kind or period; if a thing was beautiful enough, and he could afford it, he got it. And yet the house in Evelyn Gardens in no way resembled a museum. The true drawback, I take it, to any museum is that the things therein do not really belong to anybody. They feel themselves that lack, and I am entirely in sympathy with De Goncourt when he said that he would leave his wonderful collection to the auctioneer's hammer to be broken up and scattered once again among private individuals rather than to the cold indifferent chastity of a vast impersonal building. On that day when I visited Hartington with my aunt I remember that he picked up a Tang horse with a deep blue saddle and held it, stroking its gleaming patina very much as my aunt herself would cherish her trembling Pekinese. He was, I think, a long, thin man with a raddled gray moustache and a stammer. I had the impression, I remember, that he wanted us to be gone; my aunt, of course, said all the wrong things.

Mrs. Hartington I came to know rather well because I was a friend of her son David. David was, at the time of his father's death, about thirty years of age, a long, thin, shy man, very inarticulate, hiding deeply his feelings.

I had not become his friend until, one day a few weeks after his father's death, meeting me somewhere, he took me aside and begged to speak to me.



Mrs. Hartington must, when a girl, have been very beautiful, and I imagine that Hartington had added her to his collection with a great deal of esthetic enjoyment

'I want your advice,' he began shyly, but with great earnestness.

'Rather,' I answered, 'if there is anything I can do?'

'It's like this,' he went on. 'You know my father died some weeks ago. He left everything to my mother.'

'Yes,' I said. It seemed such an unlikely thing for him to have done.

'He made a will on the day he married her, and never another afterwards.'

He hesitated and then came out with it. I found to my surprise that he loved his father's things passionately, had always loved them since he was a child. He wasn't, he explained to me, in any sense a collector, didn't want to acquire more things. He didn't care for these things for their monetary value, nor for their rarity, simply for themselves. He had had them round him since he was a baby; he had come, he explained to me, to feel about them personally, so personally that he didn't want any other friends—he didn't think that he would ever find any other friends half so good. He told me this nervously, obviously expecting that I would think him an awful fool; but when he saw that I did not, he sighed with relief; he perceived that I had something of the same sort of feeling myself. He then went on to explain his mother to me. This was difficult for him, because he wanted to be loyal to her, had a deep affection for her, and understood her point of view much better probably than she did herself. The point was that she had never cared for her husband's possessions, not only not cared, but had been continually exasperated and irritated by them. I understood that this question had been, from the very beginning of their married life, the one great division between them. Mrs. Hartington must,

when she was a girl, have been very beautiful, and I imagine that Hartington had added her to his collection with a great deal of esthetic enjoyment; but Mrs. Hartington had, of course, been broadened and thickened and hardened by daily living, and as her spirit had never been esthetic—far from it, indeed—there was soon nothing left in her to respond to Hartington's kind of beauty. That is, of course, the great advantage that beautiful things have over beautiful people. I don't imagine that Hartington ever cared greatly for moral qualities or splendid principles.

THE point now was that Mrs. Hartington intended to sell everything. She was going to move into a flat, and would retain only the quite essential furniture. The discovery of this intention had come to David with a shock of the completest surprise. He had never dreamt for a moment that there would ever be a time when these things would not be with him and he with them. He told me that the morning, after breakfast, when his mother had told him quite casually that everything would be sold, had been the most frightful morning of his life. He had made, he was afraid, an awful scene. He had taken his mother, of course, by complete surprise, she never having known him make a scene before; they had always been the best of friends. I suppose that all through her married life subconsciously she had been looking forward to the time when she would be able to sell everything. She was not a cruel woman nor a revengeful—she had cared for her husband in a pitying, maternal sort of fashion—but she had looked on his purchases as desperate extravagances, justified only by their becoming one day excellent investments. It must have seemed to her a kind of insanity that a grown man should go all the way to Pekin, neglecting his business, to buy a blue plate, and now, to her amazement, here was her only child giving an exhibition of the same sort of insanity. I imagine that even though she had not before been determined to sell everything, now, after this hysterical exhibition of her son's, she was absolutely resolved.

WHAT it came to, after further talk, was that I should take luncheon with Mrs. Hartington and see whether I could make any impression upon her. It was rather pathetic, this idea of David's that I should be able to make an impression. His belief was, poor dear, that anyone would be able to make a better impression than he. He had great confidence in me. I had on this occasion very little in myself. However, the matter was arranged. Mrs. Hartington would be very glad to see any friend of David's and show him her husband's things. Part of her message to me was that I had better hurry up, because they wouldn't be there to show very much longer.

AS I stood rather nervously waiting in the drawing-room of the house in Evelyn Gardens, I realized that everything was the same as it ever had been, everything had a permanent look about it, and you needed, I reflected, a great deal of ruthless determination and a complete absence of sensitive imagination to dare to uproot this perfectly adjusted beauty. But when Mrs. Hartington came in I saw that she was exactly the woman to effect these changes. She was an exceedingly English type. America produces determined women, but they are determined for certain very definite purposes; they have their work to do in the world and know it. But Mrs. Hartington was determined and resolute simply because she was Mrs. Hartington; it had never occurred to her that she should not have her way about everything, nor that her way would be anything but the absolutely right one. In physical appearance she was square, ruddy-faced, with eyes that were good-natured, but that never questioned anything. I suspect that she had never

When Mrs. Hartington came in I saw that she was exactly the woman to effect these changes.

shown surprise nor remorse nor apprehension nor desire; it was impossible to conceive her in love. She was not so much a woman as a fact. She would be honest and honourable, and would be one of those persons who would tell you just what they thought of you, and then be sure that they had done you a service. She would be excellent on committees, and would have clear views about everything. If she knew aches and pains, she would never say so. If you were in trouble, she would be an excellent person to go to for advice, but you would never dream of going to her.

She greeted me with kindly patronage. I was David's young friend, she was David's mother, and so she would be kind to me, but without considering me at all. I was to her, I fancy, something like a very easy problem in algebra. I found it difficult at first to think about her at all because of the things in the room. I have, as I have already said, been terribly susceptible to beauty; I say terribly because if you care very much you will be forever wanting more than you can get, not possessively wanting, of course, but imaginatively. There were so many lovely things in the room that I was bewildered. The Tang horse with the blue saddle on the mantelpiece, the small Constable study for his picture 'A Summer Afternoon After a Shower,' an exquisite, jeweled crucifix, two Rembrandt etchings, and 'De Jonghe' and 'The Artist Sitting at a Window Drawing'—these were some of the things that I especially noticed. The room must sound to you something of a jumble, but the extraordinary thing was that there was no confusion at all. Hartington had obviously studied deeply the exact position of everything in the room, and in some way had transmuted them all into a general pattern of colour and symmetry. When we went into the dining room to luncheon, I began to feel, against my will, a hostility to the good lady. I have always felt envious of those lucky people who are so insensitive to personality that they can pursue their purpose without prejudice. I suppose it was my conceit that irritated me with Mrs. Hartington. I was so inconsiderable to her that if the pretty servant maid had brushed me aside with the crumbs she would have scarcely realized that I was gone. She asked me questions about myself in that kindly and indifferent manner that charitable ladies use when they are visiting the neglected poor—where had I been to school and had I been to Cambridge or Oxford. She supposed I played games, like most English young men. It was such a pity that David didn't play games better; she believed in young men playing games. Had I a father, mother, brothers, sisters, cousins, aunts? Where did I live, and didn't I find the English winter absurdly long? I answered all these things as well as I could, and then, towards the end of the meal, most foolishly burst into an ecstasy about the lovely things on every side of us. It was the worst move I could have made, but I expect that that was one of Mrs. Hartington's attributes; she was forever forcing people into absurd situations because she was herself so calm and so indifferent. From the moment of my enthusiasm I was lost as far as she was concerned.

'I am glad you like them,' she said; 'they have been, of course, very greatly admired. For myself, I don't understand this passion for collecting. It gave my husband pleasure, and so I acquiesced in it, but what I say is that there are plenty of museums, there are better things, you know, to spend one's money on.' She was so sure of this that I was bound to contradict her.

'I don't agree,' I burst out, cursing myself at the same time subconsciously. 'There is nothing I envy anybody so much as being able to have such things near them. A museum is such a cold place. Why, that Forain would be nothing in a museum; there would be fifty others as good, and thousands of other wonderful etchings as well, but here, all by itself, it knows that you care for it, and it responds and is grateful.'

At least after this I had forced her to consider me. She looked at me with the gravest suspicion. 'I do hope you haven't been telling my son these things,' she said. 'I am going to sell everything.'

'You're going to sell everything!' I exclaimed. 'Oh, Mrs. Hartington, how can you? Of course I agree that it's better to sell them than to send them to a museum; but they belong here—you'll miss them yourself terribly after they're gone.'

I had cooked my goose with a vengeance. She took me over the house with a speed that showed that she wanted to get rid of me as soon as possible. There was a room upstairs, with some Corots, a Daubigny, and a Sisley, that seemed to me the most perfect place of rest that I had ever seen. The walls were a very faint primrose, the curtains some soft silver gray, there was a little cabinet holding some pale blue porcelain, and the Daubigny had in it a wood and a stream of such perfect peace and contentment that I could have gazed at it for ever. I was allowed the merest glimpse; it seemed to me that the room sighed behind me as I left it.

In the hall, as she said goodby to me, these were her parting words: 'Please don't encourage David in his extravagant ideas; now that his father is gone, he must realize facts.' She said 'facts' as though she were slamming the door on all the exquisite things that life contains. She was wearing, I remember, a dress of dark green that encased her square hard figure like a sheet of armour.

(The concluding installment of this story will appear in an early issue.)

'I want your advice,' he began shyly.

Roman Debate on the Agitator of Galilee

(Continued from page 1)

'The truth behind these apparently mysterious circumstances,' he said, 'is perfectly clear and simple. The high priest Caiaphas and the overseer Herod are both sincerely intent on coöperation with the imperial authorities. During the series of disturbances that led to the arrest of the Galilean, they were alarmed by the intelligence that on more than one occasion Roman citizens domiciled in Jerusalem—and their property—were endangered. They so informed Governor Pilate, requesting that he dispatch sufficient troops to the zones of disturbance to establish neutral areas around the district where Roman citizens reside and conduct their business. If, as the Senator from Idajo declares, Roman troops accompanied the agitator after his arrest, that circumstance is owing solely to the fact that, like true imperial soldiers, they were determined to carry out their orders in the spirit as well as in the letter, and as a matter of duty made a point of being present at the very center of the disturbance, where danger was most likely to be encountered. It is clear to most of us, I hope, that you cannot guard against danger if you are not in its vicinity.'

SENATORIAL snickers applauded the Imperial Spokesman's humorous sally. But Senator Bora stayed on.

'It is interesting,' he said, 'to hear that the best way to protect oneself against the volcano is to take one's stand at the crater's rim, where one's efforts are likely to be most needed. But does the same explanation apply to the facts that Roman soldiers took the Galilean to Golgotha, nailed him to his cross, divided his garments among themselves, opened his side with a lance, supervised his burial, and afterward took up the duty of guarding his body in the tomb?'

Again the Imperial Spokesman stood up.

'The Senator from Idajo may or may not be aware that Mount Golgotha is the key to the advance of Roman commerce in the East. I assure him that it is so. Nearly twenty years ago the engineers of the imperial forces drew in elaborate detail plans for properly grading the eastern and western inclines so as to make possible the construction of a great slide, by means of which camel-drawn barges may be hauled to the summit and sent by gravity to the Red Sea. Although actual construction has never been undertaken, we have a treaty which permits us to do so at any time.

'Now, it is well known that the presence of a disorderly crowd on this strategic center, as well as the operation of setting the crosses—I hope the Senator from Idajo understands that there were three of them—must in the natural course of things greatly disturb the contours of the mountain. Such a disturbance could hardly fail to be disastrous to our proposed slide for camel-drawn ships. It would, in fact, render the conscientiously drawn plans of our engineers very nearly worthless. Nay, worse than worthless, for we should be deceived into wholly or partially constructing the slide, had the incident of the execution been ignored by the colonial authorities, only

to find out later that it could not be operated as planned, and all our immense labors would have gone for naught. This is not to consider the probability that, before the damage could be repaired, Roman commerce in the East would be destroyed.

'I trust the senators assembled here are agreed that Roman commerce in the East must not be destroyed? Well, so also is the Imperial Governor of Judea. If Roman soldiers were sent to observe and assist in the execution and burial of the agitator in question, it was in order that they might curb the lawlessness of an alien mob, and see to it that the labor involved in the execution and burial was performed rightly, to the end that the contours of a commercially strategic point might not be disturbed.'

The senators applauded the patriotic forethought of the Imperial Spokesman; but the Iberian rejoined:

'There are two points that occur to me at the moment, about which I am not satisfied. One is that Roman soldiers have been detailed to perform the offices of executioner and mortician for the Conservative rulers of Judea, for that otherwise the slide mentioned by the Imperial Spokesman, which exists only on paper and is ludicrously impractical, might not, if ever constructed, adapt itself, as I think the Imperial Spokesman said, to the contours of Roman camels in the East. The other is that Caiaphas and Herod are in debt to the Imperial Bank to the amount of half a million obols, their security being their prospective incomes from those under their jurisdiction—a security which, by the way, was daily becoming more dubious because of the activities of the Galilean, whom the imperial authorities have so kindly assisted in removing.'

ONCE more, B. Taurus Celogus stood up.

'The government,' he stated, 'has in its hands absolutely authentic proofs that the Galilean agitator in question was an emissary sent out and financed by the destructive fanatics at present in power in Scythia, to fire with the torch of red anarchy the populace of Judea. It is well known that the recent Congress of Scythian Sarpints unanimously agreed to a manifesto of which the third clause says: "It shall be the duty of all who work for a living to assist as much as possible in the overthrowing of the Imperial Roman rule in the colonial territory known as Judea." . . . The Galilean agitator in question has been proved beyond a doubt to have worked for a living, previous to his career of lawlessness, in a carpenter's shop in Nazareth. He thus fits exactly the description contained in the manifesto of the recent Congress of Scythian Sarpints.

'It seems to this government that it is no part of the duty of imperial colonial authorities to turn over commercial strategic points to Red Scythians from the East. We have not yet learned that it is advantageous to place a premium on the activities of alien rulers who kill engineers who would construct magnificent camel-slides to the sea, pay carpenters who work for a living, encourage high priests to forgo their lawful debts to the Imperial Bank and agitate against the Coöperative rulers of Judea.

'The Empire must, and shall, be preserved!'

The applause was tremendous.

'Abide With Me'

(*Continued from page 2*)

attention as he delivered his last message to them. He spoke to them of death: 'Oh, brethren, I can speak feelingly, experimentally, on this point; and I stand here among you seasonably today as alive from the dead; if I may hope to impress upon you, and induce you to prepare for that solemn hour, which must come to all by a timely acquaintance with, appreciation of, dependence on, the death of Christ.'

In the early evening of the same day, when the sun was setting, he walked out alone. Behind were the purple hills, silhouetted beneath 'the golden lashes of the setting sun,' before him were the waters of the Channel, every wave painted with crimson and gold. Fast fell the eventide; the darkness thickened. Returning home, he shut himself into his study. After an hour had passed away, he came out, holding in his hand the paper on which he had written, 'Abide With Me.' It was his swan song; he had spent his last inspiration on the writing of a 'song that may not die.'

The next morning he set out for Nice, where he died on November the twentieth, aged fifty-five.

His last words were: 'Peace. Joy.'

And his last written words have brought peace and joy to countless numbers. Words that are exquisite in their simplicity. A message that has the simplicity of sublimity. As he himself wrote: 'True sublimity is ever simple in conception and expression.'

One word about the melody to which this hymn is most fitly sung. It was written by William Henry Monk, the musical editor of *Hymns Ancient and Modern*. We have it from his wife that it was composed in days of grief, 'when we together watched, as we did daily, the glories of the setting sun. As the last golden ray faded, he took up some paper, and penciled the tune that has gone over all the earth.' Surely, a fitting coincidence.

In 1884, as a memorial to Lyte, the rebuilding of his church was commenced and has since been completed. But in the tower there are not any bells. The admirable proposal has been made that bells should there be hung, as a further memorial, and that every night forever they should ring out at the hour of curfew the music of 'Abide With Me.' Each evening as the sun goes down this song of hope would echo over land and sea, as indeed it does now echo over many lands and many seas, in the hearts of all sorts and conditions of men.

Indexes for Volume 26 of THE DEARBORN INDEPENDENT, *covering the period from October 24, 1925, to October 16, 1926, are available. The supply is limited. The price is ten cents a copy.*

The Strengthening *of* American Traditions

Through the revival of the Old American Dances

THE methods of the world-famous Ford School of Dancing at Dearborn are made available to everyone in the unique manual of these fine Old American Dances, entitled:

'Good Morning'

Compiled by Mr. and Mrs. Henry Ford.

This book gives complete information and instruction on each of these dances, style and deportment, and also explains how to arrange and conduct a successful Old American dancing party.

Printed in clear type and bound in flat-opening form

Price 75c

Piano Music (also suitable for violin) for 14 Old American Dances, 50c.

Orchestrations of 12 parts (including saxophone) can be supplied for 20 Old American Dances, at 25c for each dance.

Trade discount to schools, dancing instructors, music stores and orchestra leaders.

A Quiet Shelf Man

(Continued from page 8)

harm honest fabrics. As to ministering to our vanity, that is not considered of any importance to this generation; we rather attribute that to our growing sense of beauty. For nine months during the wearing out of his dyed garments, John Woolman weighed the question, inquiring most of all whether he was 'affecting singularity,' carefully examining whether he was making an immodest fetish of modesty, an immoral display of morality. He first changed his hat, getting one 'of the natural color of the fur.'

'Friends were apprehensive that my wearing such a hat savored of an affected singularity; those who spoke with me in a friendly way I generally informed, in a few words, that I believed my wearing it was not in my own will.'

IN ALL my previous readings of the *Journal*, the quaintness of the language conveying this matter has largely obscured the sense of contest. John was no fool as to his facts, and as to his conscience he was a hero. Oh, not as to the hat!—the hat was but a straw in the wind. Look at something bigger now.

It seems that when the Spirit moved him, John rolled up his tailoring implements and went off on an itinerant visitation of the meetings of the scattered Society of Friends. When John says 'Friends,' he means his coreligionists. On his rounds he saw Slavery. Remember, it was back in the 1700's—John Woolman was born in 1720 and died in 1772. It was while he was yet in the bakeshop that the first test came:

'My employer, having a Negro woman, sold her, and desired me to write a bill of sale, the man being waiting who bought her. The thing was sudden; and though I felt uneasy at the thoughts of writing an instrument of slavery for one of my fellow-creatures, yet I remembered that I was hired by the year, that it was my master who directed me to do it, and that it was an elderly man, a member of our Society, who bought her; so through weakness I gave way, and wrote it; but at the executing of it I was so afflicted in my mind, that I said before my master and the Friend that I believed slave-keeping to be a practice inconsistent with the Christian religion. This, in some degree, abated my uneasiness . . .'

HE WAS not caught again, save once. But as writing wills 'was a profitable employ, and as offending sober people was disagreeable to my inclinations, I was straitened in my mind; but as I looked to the Lord, he inclined my heart to his testimony. I told the man that I believed the practice of continuing slavery to this people was not right, and that I had a scruple against doing writings of that kind.' Sometimes in writing wills, he was able to write in the freedom of the slaves concerned; sometimes his kindness to a dying friend allowed him to write all but the slave bequests and, to save his conscience, do the work without fee.

But his hardest test was at the houses of Friends where he was entertained as a guest on his itinerancy. Many of those Friends kept slaves. He so far mastered his natural hesitancy to speak with his hosts on this question, that he resolved not to take entertainment free in such places, and either paid the host or the slaves who waited on him. It is a delightful light upon the spirit of the Friends that they did not regard John Woolman as a fanatic, nor did he regard them as fiends. Yet his protest against the treatment of the slaves was strong, and soon it became a 'minute' in the Yearly Meetings. In 1771 he gave a clear warning of what a continuance of Slavery would bring upon the country, and his warning was true.

He was not, however, a meddlesome reformer. With the Friends he felt free to urge upon them what their common belief involved; but his main care was to keep

himself from participating in what his conscience disapproved. I say that now for the purpose of saving John Woolman from the scorn of the 'moderns.' But how to keep himself free of giving indirect support to systems so interwoven with every social activity?—that was the question. John did it, else never had he become the quiet man he was; he would have been but a miserably restless man. How did he do it?

ONCE he felt an 'inward drawing' to visit the Friends in the West Indies. Now, the ship on which he must sail was engaged in the West India trade. It carried produce of the labor of slaves. The profit of the slave-made freight was so great that passenger rates were comparatively low. By availing himself of them, John would be partaking of the profits of slavery. So he drew up a paper stating these things, and took it to an owner of the ship. It is rather a lengthy document to precede the purchase of a ticket, but it has its points and besides it shows how thorough-going John Woolman was in his search for a quiet mind:

'The number of those who decline the use of West India produce, on account of the hard usage of the slaves who raise it, appears small, even among people truly pious . . . If the trade to the West Indies were no more than was consistent with pure wisdom, I believe the passage money would for good reasons be higher than it is now; and therefore, under deep exercise of mind, I believe that I should not take advantage of this great trade and small passage-money, but, as a testimony in favor of less trading, should pay more than is common for others to pay if I go at this time.'

But he did not go; pleurisy seized him, and we shall never know how the new proportionate fare could have been arrived at to emancipate one passenger from partnership in slave-made profits. We do know, however, that on his voyage to England he went steerage against all the offers of owners and Friends, because he perceived that the higher price of the cabin passage was based on vanities of furniture and creature coddlings which did not agree with the simplicity of his view of things.

It was always like him to force himself to the last test by giving the reason for his actions. He bore his testimony against war in a quaint way. Some soldiers had been quartered on him, and the officer had ridden over to pay their board. John Woolman, reflecting that the money would be part of the war taxes which he had not felt free to pay, refused to receive it, whereupon the officer said, 'I am much obliged' and pocketed the sum as a tip.

'But, thinking on the expression, I grew uneasy; and afterwards, being near where he lived, I went and told him on what grounds I refused taking pay for keeping the soldier.'

ONE day in 1754 he walked into Benjamin Franklin's print shop and out of his own pocket paid for the printing of a pamphlet, *Considerations on Keeping Negroes.* It seems to have been the only time John Woolman came near to greatness in another man.

He took long journeys among the Indians, at his own cost. He studied the rude pictorials of battles on the barked boles of trees among the Blue Ridge Mountains. He met the first onset of science in vaccination or 'inoculation,' as he calls it, and it puzzled him, yet I think that, for his times, he did some thinking of which he need not be ashamed:

'Had He (God) endowed men with understanding to prevent this disease (the smallpox) by means which had never proved hurtful or mortal, such a discovery might be considered as the period (.) of chastisement by this distemper, where that knowledge extended. But as life and death are his gifts, and are not to be disposed of in our own wills, to take upon us by inoculation when in health a disorder of which some die, requires great clearness of knowledge that it is our duty to do so.'

This is thoughtful and moderate. But it was smallpox that put a 'period' to his career.

AND yet, in all this, I have not given the charm of John Woolman, nor his secret. With such a conscience, who could find quietness? Yet he found it. I suppose that it is not an active conscience that causes unrest, but a disregarded one. He never sought to make his conscience do duty for another. He included Thomas à Kempis and John Huss, both, in the range of his charity. He did not even condemn slave-keeping Quakers. He looked for the right and when he found what he thought was the right, he allied himself with it, never offering offense or criticism to others, but humbly following his light even when it meant 'singularity.'

'I was made willing to submit to what I apprehended was required of me . . . and I felt an inward consolation which to me was very precious under these difficulties.'

Never Wrote a 'Shady' Song

(*Continued from page 4*)

swept across the country; fairly seemed to explode. Orders came in by telegraph, long-distance telephone, special delivery letters—the publishing house was actually swamped. It's been ten years now since the song was published and only a few nights ago I was twisting the dials on my radio set and I heard a church service from Chicago. The melody was "Till We Meet Again" although the words had been changed into the words of a hymn.'

Whiting is thirty-five years old. He was born in Peoria, Illinois, and attended the public school in Los Angeles, California. He went to Detroit in 1913. He is under average height and slighty inclined to weight as well as to baldness—which, I believe, doesn't fit the popular conception of a composer. His first song to be classified as a 'hit' was 'Tulip Time in Holland' and this was followed by 'They Call It Dixieland,' a song which, in all likelihood, you have forgotten. But you haven't forgotten its offspring.

'There were quite a few lines left over from the Dixieland song,' said Whiting, 'and Egan, who had written the lyrics, gave them to me suggesting another song. The thought came and I wrote "Mammy's Little Coal Black Rose." Al Jolson started that song into high favor. It was the first song of mine he ever sang and how it happened is as clear in my mind today as though it had occurred last night. I was in the front row of a Detroit theater when Jolson came on the stage and announced: "Ladies and gentlemen, I am going to sing a little song that was played for me this afternoon. It was written by a Detroit composer and it is entitled 'Mammy's Little Coal Black Rose.' "

'I was so surprised I could not speak. I thought for a moment that Jolson was jesting, but when the orchestra started playing the melody I couldn't do a thing—except——cry. Made a baby of myself, sitting there in the front row, with tears rolling down my cheeks and too choked up to utter a sound.

'Jolson continued singing that song and, almost overnight, it became a tremendous hit.'

THAT happened nearly fifteen years ago and since then the American public has been singing, pretty steadily, songs written by Dick Whiting; or rather melodies composed by Dick Whiting.

Just a few of them: 'Ain't We Got Fun,' 'Some Sunday Morning,' 'Where the Black Eyed Susans Grow,' 'The Japanese Sandman,' 'Ukulele Lady,' 'Sleepy Time Gal,' 'Sweet Child,' 'Breezin' Along With the Breeze,' 'Bimini Bay,' 'Horses,' 'Fire,' 'Tenderly Think of Me.'

Whiting has written most of his songs in collaboration with others. In two or three instances, such as 'Horses' and 'Fire,' he collaborated with another song writer in the melodies but, for the most part, the tunes on the song sheets on which his name appears were composed by him. Raymond Egan wrote the lyrics for 'The Japanese Sandman' which Paul Whiteman has proclaimed as one of the two greatest dance melodies ever composed.

'Egan had given me the words and had suggested a melody similar to another tune that was popular at the time,' said Whiting. 'This, of course, was a foolish thing to do because, by suggestion, he planted the other tune in my mind. One morning, as I was hurrying down a street in Detroit I heard a chap whistle to attract the attention of a friend. Just an ordinary whistle, with an up-and-down quick tune. Immediately I thought of "The Japanese Sandman" and rushed to the office. From that start the remainder of the melody was easy. The song was sung from a million and a half sheets, besides approximately two million phonograph records—a vagrant tune, off the streets, and from the puckered lips of a man I had never seen and will never know because I could not recognize him.'

Whiting, for years, has been a Class A member of the American Society of Authors, Composers and Publishers. There are ten or twelve composers in this rating and the qualification consists of composing a number of 'hits' each year—year after year. Not one hit—but a number.

During 1926 Whiting collaborated in seventy-three songs, of which number thirty were printed, and of the latter number, six were registered as 'hits.' To be classified as a 'hit' a song has to sell more than one hundred thousand copies of sheet music. Song composers are paid on a royalty basis. The standard return is three cents for each copy of sheet music sold; and two cents for each phonograph record manufactured. The talking machine companies, however, deduct ten per cent on all records made—charging this ten per cent to breakage.

'The songs that last are the songs that come under the classification of "sad songs," ' says the composer. 'Occasionally there will be a hit in a comedy song—but not often. It does not last long. A few weeks and another comes. There is nothing the public tires so quickly of as a silly song. Suggestive songs are short-lived, too. *The American public doesn't want these things—particularly does it frown on the suggestive song.* I take a little pride in my record of never having written one—and I never will. In the first place I can't and in the second place I have sufficient business judgment to know that thumbs will be turned on it—quickly.'

Does the Bible Predict Peace?

(*Continued from page 13*)

I have found the Bible to be what it purports to be—the Living Word of God, a message for the ordinary man's guidance nationally as well as personally, and also to contain the accurate foretold history of His Covenant People, the Anglo-Saxon nations of the earth who were to operate in the latter days as a nation, a great nation and a company or multitude of nations, and these People were to be a blessing wherever they went just as the Anglo-Saxon nations—America, Britain, Canada, Australia, New Zealand, et cetera, have been and will continue to be until the end. Not perfect, of course, because all men are imperfect and do evil, but instruments of the historic purpose.

When I am asked if the Bible prophesies Peace, I am constrained to say, Not until the causes of war have been destroyed in war.

The Almighty with accurate foreknowledge of all the wars, the terrible fightings and battles which He foretold in the Bible, knew when he appointed His Covenant People to be His battle-ax and weapons of war that it was no League of Nations picnic that Satan would lead the nations of the earth into until the Prince of Peace comes again to earth.

Among learned men in this field, August 4, 1914, to 1936, is described as the time of Chaos. November 11, 1918 to May 29, 1928, is described as the time of Truce in Chaos. Those of us who were at the front know from our experience during the late war what Chaos means, and if it return in 1928 well will it be for Britain, America, Canada, Australia, and all concerned, if in the meantime we keep ourselves alert against the tremendous war forces still existing.

Does the Bible predict peace and disarmament? Far from it. Describing those present times the prophet voices Jehovah's command, 'O, my people (God's Covenant Nations) hear My Word; make you ready to the battle and in those evil days be even as pilgrims upon the earth. He that selleth, let him be as one that fleeth away. He that buyeth, as one that will lose; He that buildeth as one that shall not dwell therein, et cetera, and they that occupy their merchandise with robbery, the more they deck their cities, their houses, their possessions and their own persons, the more will I be angry with them for their sin, saith the Lord.'

Well, there you have it in a nutshell. The pacifist says talk peace, peace and disarmament and you will attain peace, but the Bible sees peace afar off. It scorns those who 'heal the hurt of My people lightly, saying, Peace, Peace, when there is no peace.'

'But,' says some one, 'doesn't the Bible say something about beating swords into plowshares and spears into pruning hooks?'

Yes, 'It shall come to pass in the last days, that the mountain of the Lord's house shall be established in the top of the mountains' (that is, the rule of righteousness set above all other rule) 'and all the nations shall flow into it.' It is *then* that 'they shall beat their swords into plowshares and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more.' You can find it all in *Isaiah* 2:2-4.

But when you come to the times *preceding* the righteous condition described, this is what you find: you find a great league of war against the righteous nations. 'Proclaim ye this among the Gentiles; Prepare war . . . beat your plowshares into swords, and your pruning hooks into spears.' You will find this with much else of interest in *Joel* 3.

And the message of the Bible is that in the last military struggle between the forces of righteousness and the forces of evil in the world of nations, the forces of righteousness will win.

How We Played in the Old Times

(*Continued from page 15*)

from which they hailed, and such a thing as buying or trading players was not even imagined. There were no grandstands nor bleachers, no fortunes to be made by anybody. It was long before the game was dubbed 'national.' I don't know how it first acquired that name; it may have been as a set-off to the English national game of cricket. But it never has been national in the sense that cricket is across the Atlantic.

There is little money in cricket abroad, and the amateurs are more popular than the professionals. Cricket is deep in the soul of the Englishman, and everybody, literally, plays it.

You have tennis; it didn't get over here till the eighties, and we had to do without it. The idea of 'championships' in baseball, tennis, or in any other outdoor sport, was hardly yet in the germ with us; *what we played for, and had*, was fun. It was nice if the family came down to watch us, but we were content if they stayed away. We played hockey with sticks picked up in the woods: 'shinny your side' was the word, and we went at it soulfully. I was twice knocked out, once by Willis' huge club, as he drew it back for his blow and hit me between the eyes, and once by the ball, hard rubber, which imbedded itself deep in my middle section. I was sensible of the glory of being struck down in the front of battle, but not until the effects of the blow had begun to abate.

There was swimming for boys, and for girls also under proper conditions, which were such that the boys ordinarily preferred swimming off somewhere by themselves. In Concord the boys had the river—parts of it where girls never came except by invitation and with due warning—and a couple of remote ponds in the neighborhood. If girls participated, it was only under the escort of chaperones, and in bathing suits which I hesitate to describe; they were of heavy dark woolen stuff and extended from throat to ankle, and also to the wrists—and the boys had to adopt the same fashion.

At Harvard, the young gentlemen found a safe place for themselves on the banks of the Charles, where their unclad gambols were supposedly out of sight of dwellings; but the faculty one day received a protest from two maiden ladies who said that, by looking out an attic window on the river side of their house, they could discern objects afar which they felt assured must be naked men. Our swimming place was moved farther away; but the ladies came again to say that they had procured a telescope through which our unspeakable performances were still visible. What was the faculty's rejoinder I don't know; but we stayed where we were.

Skating. If you can believe it, we had no parlor skates, nor even any skating rinks; nothing but winter ice outdoors and skates bound to the feet with crisscrossed straps. The first skates were brought from Holland, had long turned-up toes, and were grooved down the blade; you couldn't get more than six miles an hour from them. A little later came the smooth made-in-America rockers, and various patent devices for fastening them to the shoe without straps. You have bettered all that, but you can't better the good times we had. There were mighty skaters too; Storrow Higginson, for instance, who could make a mile under three minutes and describe curves and involutions like the live lariat that Will Rogers manipulates today.

There were no professionals with their antics, but to do the outer edge with the elbow of the prettiest girl in school held fast in the crook of your own, with the moon overhead and the bonfire blazing on the shining ice sheet far away yonder—that was transcendent! Emerson, too, skated, but he did other things much more gracefully.

The trouble with you is that the multiplicity of your plays and playthings spoils your appetite, and what you are after is not so much enjoyment as excitement. But the edge of enjoyment stays keen, whereas that of excitement soon dulls. Your tendency is to train experts in all sports, and then to look on. But vicarious play is poor stuff compared with playing the game yourself. You know that those athletes in the arena are doing their job for pay, and you are reduced to criticizing their performance instead of jumping in and taking a hand.

I don't say that there was no petting or necking in my time, but they were always private and personal enterprises, never gregarious.

The attitude of mind of the spectator is superficial; that of the one in the game goes to the core and makes the heartier man. One hears gossip nowadays about 'Selling out the game.' But why not?—since the preoccupation of the professional is not for the glory of the sport, but for its emolument. This breeds suspicion in the onlookers—an unwholesome and debasing thing.

This magazine has for some months past been describing the dances of the days of my youth. I wish I could convey the thoughts and feeling of those who danced them. Try to imagine a young girl who fancies that there is something sacred in pure womanhood, who recognizes the perils of temptation, and therefore avoids them, instead of 'taking care of herself,' who can believe that there is in her (her own yet not her own) something that is divine and precious—imagine such a girl when she is invited to a dance. Such a thing has not happened to her every day, nor perhaps as often as once a week, or once a month. It is a thing for which she must prepare in spirit as well as in body.

For she cannot, as today, go as she is; her ball dress must be a thing apart, to be studiously planned and long remembered. She must appear other than her everyday self—embellished, exalted, transfigured. The movements of a dance carry an emotional and spiritual significance derived from long-past ages; they are a primitive language of beauty and of love: the beauty of grace, the intimations of love, and the invitation to it. To fulfill such an office no refinement can be too exquisite, no preparation too heedful. For this may prove to be her day of days, to which she will look back till the last moment of her recorded time. Her preparation for it becomes a rite, serious, yet thrilling with internal joy. Her dress must express her ideal of self, no trivial thing, but womanhood incarnate.

It seems to me that sensibilities of this sort, and a nature to manifest them, are worth while. They afford means for enjoyments which purify the nature and elevate character. To be incapable of them is to be deprived of something too valuable to be described or replaced. They not only make the passing moment beautiful, but they build an interior chamber whose fragrance is never wholly dissipated, to which we may again and again return to be refreshed and tuned.

Such elements of well-being existed in the old time, and it avails nothing for

robust optimists to stand on the rostrum and affirm that our boys and girls are as good as any have been, and in many respects better. Are the standards as high as they used to be? The young people know more—are at least supplied with more memorized information—than in former times; but there is a time for knowing, and a time for not knowing; we do not fill a jug with wine till the jug has been hardened in the fire. It was a wise man who said, 'There are things which a man is a scoundrel for knowing,'—a deep and weighty saying!

Young folk today see and hear and speed round the world: we were home-keeping bodies. But does the hearing in New York of what is said in London make the saying any more valuable? We save time; but do we save it in order to do more, or to have leisure to do nothing? The work of the world is done for the benefit of the workers, and of their dependents and of posterity.

But each fresh step in progress adds to the number of things to be done; we ourselves die in the trenches before the unattained citadel, and for our children it must be the same; instead of securing leisure for them, or for ourselves, we do but toughen their job and ours. Moreover, leisure, hard though we strive for it, is the very thing which more than any other we dread: the problem in a vacation is, What shall we do? We catch a fish, shoot a bear,

SALT LANE, BOSTON. *Pen-and-ink impression by* STANLEY W. WOODWARD

climb a mountain, canoe a rapid. But who can sit around all day and do nothing? We can play bridge, dance, eat, sleep; but sleep and food are not vacation; and the other things are not only work, and hard work, but, unlike normal trade and professional work, they pay no dividends. And if you succeed in compelling your body to quiescence, all the more do the wheels in your brain spin round, planning business to come, or recalling past successes or mistakes. No vacation in that!

But I was speaking of the comparative merits of play, past and present. In Concord, in the middle of the last century, we had to stay at home and make the best of it; we sawed our own wood, dug our wells, grew our garden truck, baked our bread, made our own gowns and breeches. Neighbors would help one another out at a pinch. There were schooldays, picnics, cornhuskings, candy-pullings, dances at home, eucher and whist, puss-in-the-corner, rowboating on the river, newspapers rare and without scareheads, books, love-making, now and then a marriage or a funeral. We never had to stop and think, What next? And it was really hard to tell, at any moment, whether we were working or playing. We also read the Bible, and believed in God and that we would meet our dead friends in Heaven. Some of our townspeople drank whisky and many chewed tobacco. I never heard of Darwin, vivisection, New Thought. Yet in some respects we were not a benighted community: we had men, and women too, who are not yet forgotten.

There was a picture in Munich called 'The Pursuit of Happiness.' Happiness is depicted as the phantom of a beautiful woman, floating onward in the air, holding up in one hand a golden crown, scattering gold from the other. The pursuer is a horseman, desperately reaching toward her from his saddle, heedless that the hoofs of his horse are trampling to death another woman whom he had loved, and that he himself is on the point of being overtaken by the skeleton hand of Death, riding behind him; beneath him are the last timbers of a broken bridge, and beneath that, the Abyss. But the phantom floats on in her glory. We contemplate the picture: 'Yes, it's true, but it can't be helped!' —and we pass on.

But the true point seems to be, not that temptation can be abolished, but that we can avoid the broken bridge. Our stupendous material progress is an experience, a natural result of continued mental activity. Danger lies only in our regarding it as of any real value in itself. The ancient warning hits the mark, What shall it profit a man if he gain the whole world and lose his own soul?—and if we object that we have no souls, yet the truth remains: material things, except as garments of things immaterial, are rubbish or worse. But recognize them as mere garments, and you are free.

Thomas Carlyle said it in his *Sartor Resartus*. All wise men, before and after him, say the same. It was confessed in Concord, and cannot be gainsaid now. But for young people, just emerging into the present extraordinary brilliance of material achievement, and additionally perplexed by assurances of plausible but shallow persons that creation is self-evolved and directed, and whose judgment or understanding of proportion and relation is necessarily unmatured—it is small wonder that the dazzle of the tinsel obscures true vision.

Control of nature is a stage which we are bound to reach in the course of events. It may be of less importance than we are prone to think, but if we are not beguiled into imagining it to be the millennium, it cannot hurt us. But it may be questioned whether our present cumbrous paraphernalia be not excessive. Mind has made it; may not mind accomplish the same or better results without it, or, as we would now say, miraculously? Then, things would no longer be in the saddle; and we would probably dispense with most of the impedimenta which we now hold to be necessities, or luxuries. Nature, so long hostile, will become our playmate. Old Concord was primitive, but it was not far from the right idea.

Learns Shorthand in 15 Hours!

AFTER 15 hours' study of Speedwriting I could take dictation of unfamiliar material at 90 words per minute, and read it back without trouble. Almost at once I got a better position, and more salary!' —*Thomas McCabe, 75 West 102 Street, New York City.*

No other shorthand system ever devised could be mastered in so short a time. But the **simplicity** of Speedwriting is only ONE of its advantages over all other systems.

Speedwriting is a scientific condensation of the English language; written with the ordinary alphabet; no need to learn a new 'language'; no need for training the hand to make new and difficult curves and hooks; can be mastered in one third the time required by any other system; may be written **on the typewriter** at the rate of 200 words a minute and MORE; may be written with pencil at the rate of 100 words and upwards; notes can be read by **any other** Speedwriter; can be written from dictation after your **first** lesson; CAN NOT BE FORGOTTEN—every word you write in longhand is **Speedwriting** practice.

Get complete particulars regarding this amazing new shorthand by mailing the coupon today!

The Training of the African Black

A Youth Must Pass Through Physical Ordeals and Learn the Taboos Before He Can Be Accepted Into the Tribe

By HENRI GALLAND

Translated by ANDREE PRATOUCY

THE ways of thinking of the black are, in many respects, widely different from those of the white men. A deep gulf divides them. That statement is confirmed by the study of their moral ideas. For white men, ethics rule action, as far as they tend toward an ultimate aim. But how does the black man conceive that aim? He does not even ask himself the question, What is the use of it? Tomorrow does not exist for him. He has one aim, that is, to draw from life whatever good it may offer and to avoid as far as possible whatever evil can befall him. There is no established moral code for him; he observes the 'customs' handed down by his ancestors.

Who would believe that the act of drinking or of eating, which seems so natural to us, is not so for the black? That act of his daily life is laid under a great number of prescriptions, of prohibitions, in a word, of *taboos*, a term which has been borrowed from the far-distant wild tribes of the Pacific Ocean and which means marked in a special way, sacred. The chief characteristic of the taboo is that it imposes a limit on men's activity. The law of taboo never prescribes to act but always to refrain from acting. It is not an incident, but a restraint, the general motive of which is dread of danger.

One day he catches sight of fruits on a tree, he eats them and finds their taste pleasant; therefore, he may eat them freely. A few days after he comes across another tree. He plucks one of the fruits, finds it unsavory, and perhaps falls ill. No doubt the latter fruit was a forbidden fruit and he will warn his children that it is henceforth prohibited.

I was once struck by the discomfited countenance of a hunter whose fame was certainly not exaggerated; never did he fail to come back from the bush without a quarter of antelope or of wild boar on his shoulders. One morning, as he had returned to the village empty-handed, he came to me and asked me to punish his wife who was certainly the cause of his failure. He felt sure she must have been unfaithful to him while he was away. In vain I tried, with all sorts of excellent reasons, to make him understand that the thing was impossible, but my man obstinately refused to give up his idea.

'You may assert the contrary,' he said. 'If I killed nothing, it is because my wife behaved badly while I was pursuing the game. For us hunters such a belief cannot be questioned!'

In the same way as a murderer fears the ghost of his victim, so the hunter or the fisher dreads the ghosts of the animals he has killed, or is going to kill. Hence those taboos and purificatory rites that he observes before and when hunting or fishing, and which are laid also on the members of his family. Or again he will fast for several days before setting off on an expedition; he will impose upon himself a rule of continence, and will even go to the point of refraining from looking at the face of a woman, were she one of his wives, and from drinking out of the same calabash as she—a most peculiar custom that is to be found in other parts of the world, the breach of which is sure to bring about the failure of the undertaken expedition.

—Underwood & Underwood Photo.

Prospective African bridegroom displaying his wealth before the hut of his future father-in-law.

In many tribes the black who returns from a journey washes his whole body and smears it with red or white earth, an efficient means of removing the evil with which contact of strangers from another village might have tainted him. Sometimes, when a stranger wishes to enter the village, he must also bathe himself and smear his body with earth. White men have been often forced to comply with these rites before being admitted into certain tribes.

The acts of eating and drinking are not, as we have seen, as natural for the black man as they are for the white. He is afraid lest his soul should escape out of his mouth when he swallows food or drink. I have seen chiefs—perhaps their social position forced them to do so—covering their heads when eating or drinking. Travelers related long ago that the kings of Congo were sure to die if any of their subjects saw them eating or drinking.

In the Congo the belief is still widespread that evil spirits may enter the body along with the food or the liquid. It is then necessary to keep them off by observing certain rites. Bissa, a chief of the *Balali*, in the French Congo, squats down when drinking. He holds the vessel with his left hand, drives his knife into the ground and keeps his forefinger on it while he is drinking. The men of his court slowly strike their breasts until he has emptied the vessel.

Often the black man will be seen throwing on the ground a few drops of the liquid before drinking. He thinks he is thus keeping off the evil spirits he might otherwise absorb.

And what about the taboos on food? In depicting the religious life of the black, I said that the fetishes consisted of queer objects of all kinds. If the fetisher succeeds in securing remains of food, he acquires an extraordinary power, therefore, in many tribes, food left over is always burned. If he can lay hold of cut hair and nails, his power knows no bounds. He feels certain he has their owner at his disposal and he can

cause him to die whenever and wherever he likes. The part played by hair in the magic of the black tribes is indeed all important. A native whom I once found in his hut, dying, told me he was not suffering from disease, but from the evil curse cast upon him by an envious fetisher, who had contrived to secure some of his hair, in spite of the care the poor fellow had taken to burn it after one of his friends had cut it for him.

Incidentally the razor is unknown to these men of the bush; a sharpened knife or a bit of broken glass fills its place.

The importance of the beard is no less considerable. Is it on account of this belief that, in the district over which I ruled a few years ago, the Bateke treat their beard and hair with special care? They scrupulously anoint them and plait them every morning.

Names themselves are under special taboos. A native is often reluctant to tell his name and will allow you to know only his nickname.

THE previous examples suffice to show that the moral life of the black is composed of numberless, varied prohibitions. Many more could be added; but you can easily suppose that, whenever some evil befalls him—an accident, a disease, an unfruitful hunting or fishing expedition, a drought or too heavy rains that destroy his plantations—the black man at once suspects the influence of evil spirits or feels sure that, since fate has struck him, he or one of his family must have broken some taboo or other. He then tries to locate the author or the cause of the evil, the exact nature of the breach, and he resorts for the purpose to dreams, the ordeal poison or his other forms of divination.

The education of the black man is not confined to the study of those prescriptions, however. As soon as he is of age, he must perform a kind of novitiate. He undergoes ordeals, more or less hard. Once he has successfully gone through them, he becomes a member of the community to which he had belonged, up to now, only in an incomplete way; in a word, he becomes a *man* in the real sense of the word.

When does the moral education of the child begin? There is no fixed age, properly speaking, but it is between the twelfth and fifteenth years. The fetisher or the elders who are intrusted with it begin by teaching him the history of the tribe. The tales that compose its folklore, several of which have already been heard by youths at night around the fires of the village square, are told again; new ones are added, almost always full of verve and humor. I shall here digress to relate two of them: they come from the country of the *Pahouins*, the great tribe that lives at the north of Gabon. I retain their primitive form.

* * *

THE MAN AND THE TORTOISE

Zam Nam Mebeghe had a daughter. 'He who wishes to marry my daughter,' he had said, 'must tie water into a bundle.' When the tortoise heard the noise, he said, 'I will marry his daughter,' and he went away carrying a pipe and tobacco. As soon as he arrived at Zam Nam Mebeghe's he said, 'I have come to marry your daughter.' Zam Nam Mebeghe replied, 'Tie water into a bundle and you will marry her. I ask nothing else.' The tortoise lay down and at daybreak he said to Zam Nam Mebeghe, 'Give me a child to show me the way. I am going to tie water.' Zam Nam Mebeghe gave him a child and when the tortoise and the child had arrived at the river, the tortoise built a weir and said to the child, 'I have forgotten something. Take the pipe to the father [Zam Nam Mebeghe]; let him smoke and tie the smoke that goes out the pipe.' And he added, 'I shall then tie the bundles of water with those ties.' The child went away and gave the pipe and the tobacco to the father. The latter began smoking and tried to catch the smoke to tie it. It was no use. Then he said to the child, 'Call the tortoise and ask him to come here.' When the tortoise arrived he asked how it was possible to tie smoke. The tortoise replied, 'How do *you* tie bundles of water?' Zam Nam Mebeghe laughed and thus it was that the tortoise married the daughter of Zam Nam Mebeghe.

* * *

THE DOG THAT DROPS ITS PREY TO CATCH THE SHADOW

Once upon a time, a man killed an antelope. When he had cut it into quarters a dog came up and stole a piece of the flesh and ran along the road crossed by a small river. As he looked into the water he saw his shadow holding a morsel of flesh. He then wanted to seize it, but he dropped the piece he had in his mouth and thus lost it in the river.

'The man who wants the thing he has not will lose that which he has.'

* * *

As soon as they have been chosen, the young men are taken into the forest and spend from two months to two years in retirement. Why in the forest, you may ask. Because it is a place of mystery. What is sought, before everything else, is secrecy; and it is in the bosom of the forest that meetings are held in one or several huts either built there for the purpose, or carried from the village piece by piece and reërected in the selected spot. In many places indeed, the huts are only composed of panels woven with stiff grass.

THE aspirants are introduced into the inclosure with certain ceremonies and the ordeals are begun at once. They drink a narcotic and their bodies are smeared with white earth, so that they assume the appearance of real phantoms. The black considers white the color of phantoms.

When they go about, they are careful to make some noise to warn people of their presence, either by special cries, or by small wooden or iron bells, similar to those that the natives tie around the neck of their dogs in hunting expeditions.

What is the education given in the school of fetishers? The young men are taught the history of the tribe and its folklore. They learn arts and some craftsmanship, how to weave mats, to build huts, to dance common or special dances, the latter being intended to keep off evil spirits; above all they are initiated to religious practices, to the knowledge of taboos, the medicinal virtues of plants: in a word, they complete the elementary education received from their parents.

At the completion of his term of learning, the young man returns to his village and takes up again the gestures of daily life, for his family has been regarding him as dead during his period of initiation. He himself is convinced he has been dead and a new life begins for him, consecrated by his final entrance into the community.

(*This is the second of a series of articles on this subject. The next will appear in an early issue.*)

The Holy City

Anna Hempstead Branch

AND you will see a basin there,
Pure and clean and very white,
Lifted wings on either side—
Holding it with gentlest might.

Ah—those lifted wings shall be
Exquisite, like shining stone,
And the water in that basin
Like a Queen upon a Throne.

Underneath, the twisted shape
Of a man shall hold it up,
Half an angel, half an ape,
Struggling for the chastened cup.

And you will never know at all
I turned myself to this—
The laboring shape, the lifted cup,
The water's healing kiss.

A LETTER *From* Nebuchadnezzar

In Which He Tells of a Golden Statue *Ninety Feet High and Nine Feet Wide*

By WILLIAM A. McGARRY

A LETTER from Nebuchadnezzar to all posterity has been translated in the University Museum at Philadelphia. It was written in the year 586 B. C., at the time when the author of the Book of Daniel in the Old Testament was jotting down his description of a golden statue ninety feet high and nine feet wide. Heretofore that account has been taken with a grain of salt by historians, but if the builder of the supposed statue is to be believed, all previous estimates of Babylonian magnificence must be discarded as inadequate. The statue of gold was only an item in a scheme of decoration that for brilliance and expense has never been equaled before or since.

Nebuchadnezzar's own story of this magnificence was written at his order on a barrel-cylinder of clay, and stored in the crypt of a cornerstone, just as records are placed today. Half a hundred years ago a small section of it was found, containing just enough information to whet the curiosity of archeologists. Ever since then explorers have been searching for the rest of it. Thirty-five years ago it was found, and sold in London to an agent of the museum, who failed, however, to recognize its contents or its author. It has been on view in the museum since that time, each curator of the Babylonian section assuming that it had been translated by one of his predecessors.

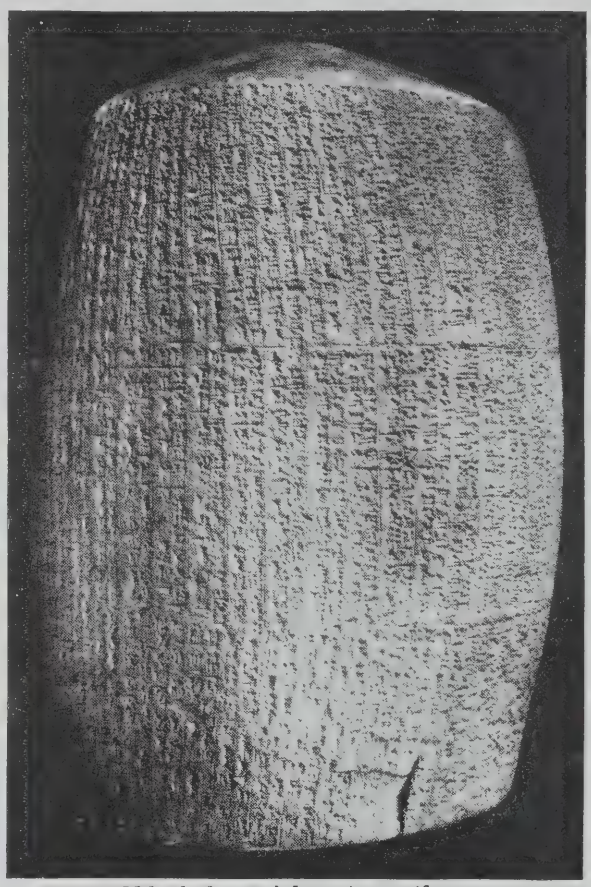
Reading cuneiform script is a laborious occupation, and the work was so large that no one tackled it until Dr. Leon Legrain, failing to find any records to show that the cylinder had been read, began to study it, and the text told its own story.

It is a story calculated to take away the breath of a modern world which regards gold as the basis of wealth.

Gold, in the Babylon of Nebuchadnezzar, was only a sort of building material.

Silver and bronze were in the same class, together with cedar and magan wood, lapis lazuli, alabaster and precious stones. At that time, of course, gold was not hoarded as at present. It had come into some use for the minting of coins, but the great majority of human beings still fixed standards of value by a measure of wheat, barley or dates, or a quantity of hides. In most commercial transactions no other medium of exchange was used. Even the rulers of men regarded gold and silver as mainly useful for decorations.

Babylon today is a somber ruin rising a few feet over the sands of the Mesopotamian desert. In those days it must have been the most dazzling spectacle ever produced by man. The statue of which Daniel speaks—if it existed—doubtless was visible at a great distance.



Nebuchadnezzar's letter in cuneiform.

But the towers of the shrines, according to the account now brought to light, and the vessels that rode at anchor in the canals, were even more astonishing.

Here is the story as Nebuchadnezzar dictated it to his scribe:

'When Marduk the great lord had truly created me and given me power to be pastor of the countries and when Nabu his true son, who loves my royalty, had trusted into my hands the splendor of great nations, I marched with the help of their sublime power from the upper to the lower sea and I counted all these lands unto my dominion and the lord Marduk my lord delivered unto me silver, costly precious stones, huge cedar trees, a heavy tribute, magnificent presents, products of all countries, treasures of all habitations. I had them brought in Esagila and Ezida before Marduk the great lord of the gods and before Nabu his dutiful son who loves my royalty. Nabu and Marduk looked with favor on me and intrusted me solemnly with the embellishment of the city and the restoration of the temples.

'Esagila the awe-inspiring sanctuary, the palace of heaven and earth, the house of delight; Ékua the shrine of the Enlil of the gods, Marduk; Kaushduglisug the gate of Zarpanit's shrine; Ezida the abode of the god of all the kings of heaven and earth, the shrine of Nabu of the temple court, I covered with shining gold and let shine like the day. I restored Etemenanki the Ziggurat of Babylon. In Borsippa I restored Ezida, the righteous house beloved of Marduk for Nabu the illustrious son. I enveloped tall cedars with bronze and laid them as a cover. Magan wood, sidaru wood, strong cedar wood overspread with shining bronze I also placed above.

'Inside its foundation, to frame it in, I laid cedar trees and I strengthened their joints with shining bronze clamps. The huge cedar trees, which my pure hands cut in their forest of Mount Lebanon, I clothed with shining gold and I adorned with precious stones and I had them laid across by three as a roof over Emahtila the shrine of Nabu. Above these cedars I spread shining bronze as a covering. Above the bronze I placed a tahlal as a crowning fence on their top. In order that no rain, storm, or cataract of heaven should reach them I redoubled and with strong cedar wood built a new roof above them.

'As for the six rooms adjoining the shrine of Nabu I adorned their cedar roof with bright silver. As a roof over all these rooms I laid huge cedar trees. I enveloped magan wood with bronze and I placed it as lintels on high. I fabricated huge bulls in bronze and I clothed them with a coating of gold and adorned them

with precious stones and I placed them on the threshold of the shrine gate. The threshold, the fetter, the bar, the door wings, the lintel, the knob, the lock, the bolt of the shrine gate I plated with shining gold. With tiles of clear silver I made bright the passage to the shrine and the entrance of the temple.

THE door wings of magan and cedar wood I encased in clear silver and over the hollow of their span I placed lustrous alabaster and I fixed the lintel of all their doors. I made the dais of Ezida shine, the lintel and the hinges in a fabric of clear silver and placed them inside. I covered with clear silver the cedar wood of the roof of the Dara gate through which goes and comes the son of the lord of the gods.

'The threshold, the fetter, the bar, the door wings, the knob, the lintel, the lock, the bolt, the architrave and the siglim I plated with clear silver. I fabricated huge bulls of silver and I placed them on its threshold. This gate through which goes and comes the son of the lord of the god Nabu, when he rides in procession into Babylon, I let shine like the day. The shrine of fate, the abode of Nabu, the brave, the illustrious son, in which at Zagmuk the beginning of the year, on the fifth and on the eleventh in his going to and coming from Babylon, he Nabu, the victorious son, takes his rest, I made in a fabric of clear silver and I placed in front of this gate. Bulls of shining silver I planted as ornament on the threshold of the gates of Ezida.

'In the obedience of my faithful heart I attended to these two temples and I adorned their structure with gold, silver, precious stones, bronze, magan and cedar wood.

'I made the construction of Ezida resplendent like the star writing of heaven and no king who shall walk as I do shall change the construction of this temple, which no king among the kings has ever built, while I have made it magnificent for Nabu and Marduk my lords. With rejoicing and jubilation I let Nabu and Nan my lords enter and settle in the abode of their hearts' gladness. To strengthen the defense of Ezida I restored the wall inclosing Ezida and the constructions in front of the temple court, facing Dannutim-Anna the Shrine of Sin (the moon god) in its middle and everything between. I am Nebuchadnezzar, king of Babylon, who takes care of the sanctuaries of Marduk and Nabu my lords.'

At this point the recital describes how Nebuchadnezzar built a third wall and moat around Babylon to strengthen its defense, and, on the far side of the Euphrates, completed a quay of burnt bricks started by his father. He then takes up the decoration of the two sacred ships used by the gods and their high priests, as follows:

I ADORNED the boat Udura on which rides the lord of the gods Marduk, its front and rear, its upper structure, its sides, its deck post and dragon with 14 talents, 12 minehs of shining gold, 750 pieces of marble and bright lapis lazuli, and on the surface of the clear Euphrates I let him shine splendidly like the stars in heaven, and I filled it with jewels for the admiration of all the people. I covered the cabin of the boat of the Ganul canal, the boat of Nabu, and also both sides, with 13 talents, 30 minehs of shining gold and costly precious stones and for the going and the coming of the illustrious son, Nabu, who at Zagmuk the beginning of the year rides in procession into Babylon, I let shine like the day.'

The rest of the three columns of inscriptions describe the various restorations of fortress walls and temples made by Nebuchadnezzar, who even that early was aware of the rising strength of the Persians. It will be recalled by readers of history that the empire fell under Belshazzar, son of Nebuchadnezzar, and the emperor at whose feast Daniel translated the writing on the wall. The story of the prophet relating to the great image of gold, as it appears in the third chapter, first verse of Daniel, is as follows:

NEBUCHADNEZZAR the king made an image of gold, whose height was three score cubits and the breadth thereof six cubits; he set it up in the plain of Dura, in the province of Babylon.'

A cubit, properly speaking, was the length of a man's arm from the elbow to the end of the middle finger. Since arms differed, the Romans fixed the measurement at seventeen and two-fifths inches, but the Hebrew cubit was fixed at twenty-two inches. Today it is generally considered as eighteen inches. On that basis the 'three score cubits' would be ninety feet—a figure probably exaggerated.

Dr. Legrain points out that Herodotus, the 'father of history,' had the following to say about the wealth of Babylon:

'In this temple of Babylon is another chapel down below, in which is seen a great gold statue representing a seated Jove. Close to the statue there is a great gold table; the throne and the dais are of the same metal. The whole according to the Chaldeans weighs 800 gold talents. Outside of the chapel is seen a gold altar on which only suckling lambs were sacrificed. There was moreover in those days within the sacred area a statue of massive gold whose height was twelve cubits. I have not seen it, and only report that the Chaldeans tell about it.'

Even at this rate the statue would have been thirty-three feet high.

Writing *for* Magazines

WRITING for magazines or making books is both an art and a business, subject to all the hazards of any business. During the last five years I have written 246 articles and several fiction stories and sold them to fifteen different publications. This has been done as a side line to my 'regular job.' I carry a portable typewriter and a supply of paper wherever I go, and can unlimber and get into action anywhere. More than once when a train was late I have turned a suit case up on end in a depot, put my typewriter on it and improved the shining moments.

Magazine writing as a business deals with finding a market for what you produce. It is purely a matter of selling a commodity. A study of salesmanship has helped me immensely at this point. The magazines are the market. They purchase much of their material from free-lance contributors who make a business of writing. An enormous number of stories and articles must be written to supply the magazines that are published regularly each week or month. The buying is done from three to six months in advance. Several factors enter into the calculations of the editors such as timeliness, editorial policy and the state of the treasury.

A writer must analyze his market just as does a shoemaker, or any other manufacturer. Magazines may be divided into three general classifications—all fiction, articles, or partly articles and partly fiction. The fiction magazine may be further divided into groups, such as adventure, mystery, detective, sex, and business. Those that publish articles are not all alike. Some use general articles and others feature personalities.

BEFORE you write anything, decide what you are going to produce—a story, a general article, essay, or a personality sketch. Then pick out a particular magazine and take careful aim. If you go shooting all over the lot, you will probably end up by missing everything.

Read the stories and articles of the publication you have chosen in several numbers and make an effort to catch the vision and purpose of the editor.

A plan used effectively by one writer is to get out a query bulletin, giving titles and a brief description of the material in hand. He offers to submit articles on approval, and has a dotted line at the bottom where the editor can sign. The circular is duplicated and mailed to editors under two-cent postage.

The advantage of this plan is that you will quickly find the editors who are interested in what you have to offer, who are not already stocked up, or who have not assigned that subject to another writer.

There is keen competition among writers and editors, all of which helps to make life interesting. Editors are always on the alert to discover writers who can give them fresh and exclusive material.

Many of our most interesting magazine stories deal with personalities and are based on interviews.

The interviewer and interviewed often become quite friendly and a relationship is created which results in more than the one story.

There are certain confidences which a magazine writer must respect as a gentleman and as a matter of good business. Very often some of the material he never uses would make more interesting reading than the articles that he actually gives to the public. If he is indiscreet he will not be trusted, but if he gains a reputation for being 'safe' he can generally get what he wants. A writer who violates a confidence is like a man who plays with dynamite. He never does it a second time.

A POLICY which many interviewers carry out is to submit a carbon proof to the subject of an interview before the article is printed. Such a method is a protection to all concerned—subject, writer and publisher. It is very difficult to frame an article from notes or memory so it will be entirely free from inaccuracies. Where questions involving expert knowledge are discussed the article is turned over to an expert for correction or revision.

CHATS WITH OFFICE CALLERS

'Here's a pretty problem to figure out,' observed ***the Tax Expert.*** 'Church property, as we all know, is exempt from taxation. But what are you going to do when, as so often occurs nowadays in our big cities, churches put up buildings, a part of whose structure is utilized for offices or apartments? I'll tell you how it's accomplished in one example that came under my notice. It was a Presbyterian church whose land, during the time it was entirely occupied for church purposes, was treated as one lot exempt from taxation. About four years ago, the church improved a vacant twenty-four-foot frontage by putting up a small building used as a real estate office. A new lot was created out of this section, and land and building pay a full tax on an assessed valuation of $185,000. The remainder of the site was improved a year ago by one large structure containing a banking office on the ground floor and business offices on the upper floors. The original plot was then divided into three sections. The church occupies the western end of the plot, the land and building, appraised at $390,000, being entirely free from taxation. The parish house, adjoining, appraised at $150,000, is wholly exempt, of course. But the corner which is utilized almost entirely for business purposes is taxed on a valuation of $700,000, the city having exempted $35,000 because the church uses some rooms in the building. The full value of the property is $1,460,000, of which $885,000 pays city and state taxes. These problems seem to occur because growing cities encroach upon the former isolated locations of churches, which, finding themselves central points in populous sections, either have to or desire to increase their incomes for upkeep and social work.'

❦ ❦ ❦

The Russian Youth was intensely serious. He drifted in and drifted out again, humorless, heavy with disapproval of things American, a prophet of woe. He spoke of Russian chess with king and queen and bishops abolished. He spoke of Russian literature and its splendid gloom. He spoke of the abolition of the Church. Then he touched on the dance and had this to say: 'There is a new dance called The Machine because it embodies all the movements of a machine. It is a government invented affair. The dancer pivots on his heel, which movement represents the revolution of a wheel. Or he thrusts forward a foot then pulls it back, portraying the thrust of a piston. He stamps to symbolize the hammer, and he slides to represent grinding.'

❦ ❦ ❦

We had been to a movie, ***the Wanderer and I,*** so had seen emotion pictured by heroines with heaving chests, astonishment registered by one character looking at the feet of his *vis-a-vis* and allowing his eye to travel slowly upward until face met face, grief portrayed by women who clung to door knobs, men who expressed anger by catching their lower lip with their incisor teeth, others who by way of representing surprise collapsed tragically against any handy piece of furniture. So being in the office we talked about gesturing, then about novels, with especial reference to the play of coincidence.

'The trouble is,' said the Wanderer, 'that some of us do have chance meetings of an extraordinary nature, and they are often so much out-of-the-way that we don't care to tell the tale of them.'

'As for instance,' suggested I, to encourage him.

'Well, here is an example,' he answered, and took a slip of paper from his vest pocket, then flipped it across the desk. A woman's name was written on it.

Indexes for Volume 26 of THE DEARBORN INDEPENDENT, covering the period from October 24, 1925, to October 16, 1926, are available. The supply is limited. The price is ten cents a copy.

'Exhibit A,' he said. Then added, 'A sort of answer to a petition like that of the Perfect Angler which runs: "Lord grant that I may catch a fish so large that even I when speaking of it afterward may have no cause to lie!" '

Then he went on to tell of how, in Paul Honoré's studio, the day before, some of the Bonstelle company, playing *The Enemy*, had gathered. In the course of the hour he had fallen into conversation with Patricia Calvert, who plays the part of Mizzi Winckelman, and they began comparing notes, talking about travel, and about parental nationalities. Patricia said that she did not often talk of the nationality of her mother, the fact being odd and almost unbelievable. 'She is a Patagonian,' she said. 'Not an Indian; but a white born in Patagonia,' then went on to explain where Patagonia was situated. But the Wanderer was interested and followed up with, 'When did she leave there?' 'In 1896,' answered the girl, hearing which the man was all for precision. 'Write down your mother's name,' he said, 'and I'll wager that I'll tell what it is without seeing it.' And so it was, for no sooner had the girl written the name and folded the paper, than he called out the name correctly. For there had been an adventure years before, with fight and counter fight, in which encounter the Wanderer had been engaged. It was a little romance with beginnings in Patagonia and the Isle of Man, with twenty years in between, and, during those years a world of wandering; and now the threads meeting again in Detroit. There's this to add. While the Wanderer is a writer and the girl he met is an actress, and while the surroundings were interesting, the discovery was made without any display of dramatic force. The best type of popular fiction and screen convention would have represented them as being acutely conscious of poetic atmosphere, with the others in the studio following events as they unrolled with breathless interest, perhaps standing in a semicircle with the principals in the center. Instead of which the two talked quietly, as they might have about the weather, eating ham sandwiches the while.

❦ ❦ ❦

He talked with uncommon animation, did ***a Man From Biloxi*** who had a taste for maps. He had been to Ann Arbor where he talked with Karpinski, the cartographer, and there saw old maps. He had spent twenty-five hard-earned dollars to buy a Book of Old Maps. Then he had gone to New York, called upon Victor Hugo Paltsits who is the keeper of manuscripts in the public library, and thus came to see the so-called Lenox globe, a thing of engraved copper about the size of a croquet ball. On it the contours of South America are shown with correctness although the globe was made about 1503 or 1507, long before Magellan sailed. It bears no date. At the time of its making Australia was not officially known, but the globe maker seems to indicate the northern part of that continent. However, there was a lone pilgrim named Barthema, who sailed the Banda seas long before the Portuguese touched that quarter of the world, and he records that 'natives told us that, to the south, beyond the island aforesaid (Java) dwell sundry other sorts of men . . . and . . . there daylight stays but four hours in those parts,' which may seem to indicate Australia. So there's matter for speculation in the globe, said the Biloxi man. There is also interest in its discovery, for it was found in Paris, in 1855, by the architect, Richard M. Hunt, who presented it to the Lenox Library.

❦ ❦ ❦

The English Lecturer spoke of Coleridge's Kublai Khan which shaped itself to the poet in his sleep, whereupon the woman school-teacher displayed an unexpected knowledge of authors' visions and said that Robinson Crusoe was the result of a dream by DeFoe, Rienzi the dream offspring of Lord Lytton's brain, *Westward Ho* had its beginnings in a dream of Kingsley's. Then one of the office men told of Dryden's habit of eating late suppers to induce dreams. So a suggestion framed itself—An Essay on Dreams as Literary Influence. Or put it this way—The Nightmare Motive in Modern Novel Writing.

❦ ❦ ❦

'You can't tell where the unscrupulous exploiter will head in next,' said ***the Army Officer.*** 'In New York, near the Pennsylvania Station, I saw, exhibited in a window The Boy Scout Smoking Outfit—complete with packet of cigarets, bundle of little cigars, small pipe and tobacco, matches, cigaret holder, all compact for one dollar a box. The name of the manufacturer was something like Schuster and Marx, or some such similar combination.'

CAN YOU TELL ME?

Question. What per cent of the population of the United States are dependent after they are unable to work?

Answer. While there are no national statistics covering this question, figures compiled from a study of a relatively large section of the population would indicate that thirty-seven per cent of those over sixty-five years of age are dependent.

❦ ❦ ❦

Q. Where was radium first found and by whom?

A. Radium was discovered in 1898 at Paris by Professor Pierre Curie and Madame Sklodowska Curie in collaboration with Monsieur Bemont. It was found in the sulphate residues from pitchblende of the Austrian mines at Saint Joachimsthal, Bohemia, which had been previously worked for the metal uranium.

❦ ❦ ❦

Q. What were President Wilson's fourteen points?

A. 1. Open covenants of peace, openly arrived at.

2. Absolute freedom of navigation upon the seas.

3. Removal in so far as possible of all economic barriers and establishment of an equality of trade conditions among nations.

4. Reduction of national armaments to lowest points consistent with domestic safety.

5. Adjustment of all colonial claims upon principle that interest of populations concerned must have equal weight with equitable claims of the government whose title is to be determined.

6. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest coöperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy.

7. Evacuation and restoration of Belgium.

8. All French territory should be freed and invaded portions restored; wrong done to France by Prussia in 1871 in matter of Alsace-Lorraine should be righted.

9. Readjustment of frontiers of Italy along clearly recognizable lines of nationality.

10. Peoples of Austria-Hungary to be accorded freest opportunity of autonomous development.

11. Rumania, Serbia and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; relations of the several Balkan States to one another to be determined along established lines of allegiance and nationality; international guaranties for their political and economic independence and territorial integrity should be entered into.

12. Turkish portions of Ottoman Empire should be assured a secure sovereignty; other nationalities now under Turkish rule should be assured security of life and opportunity of autonomous development; Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations, under international guaranties.

13. Erection of an independent Polish State to include territories inhabited by indisputably Polish populations.

14. A general association of nations must be formed under specific covenants for the purpose of affording mutual guaranties of political independence and territorial integrity to great and small states alike.

In this department we shall do our best to answer questions concerning Government and other matters. Write your question clearly. Sign your name and address. Your name and address will not be published. Answers will appear in a reasonable time after receipt of questions.

Q. How many English-speaking peoples are there in the world as compared with some of the other major European languages?

A. The English language is spoken by more than 180,000,000 people; the German by 120,000,000; Russian, 90,000,000; French, 60,000,000; Spanish, 55,000,000; Italian 40,000,000; Portuguese 30,000,000.

❦ ❦ ❦

Q. Who are the Senators and Representatives from Michigan?

A. The Senators are James Couzens and Woodbridge Ferris. The Representatives are: John B. Sosnowski, Earl C. Michener, Joseph L. Hooper, John C. Ketcham, Carl E. Mapes, Grant M. Hudson, Louis C. Cramton, Bird J. Vincent, James C. McLaughlin, Roy O. Woodruff, Frank D. Scott, W. Frank James, Clarence J. McLeod.

❦ ❦ ❦

Q. Did the civilians who worked for the Government during the war get a bonus, and if so why didn't those who worked at Camp McClellan get one?

A. During the late war and for some time thereafter civilian employes were allowed an increase in their rate of pay (the so-called bonus) under certain conditions set forth in the Acts of Congress granting the increase. It is thought likely that the increase was paid to such employes at Camp McClellan as were entitled to it.

❦ ❦ ❦

A correction: The issue of April 9, in naming the men on the Interstate Commerce Commission in reply to an inquiry, included in the list the name of Frederic I. Cox. Mr. Cox is no longer on the Commission. The list should read: John J. Esch, chairman; Joseph B. Eastman; Balthasar H. Meyer; Henry C. Hall; Clyde B. Aitchison; Johnston B. Campbell; Ernest I. Lewis; Frank Mc Manamy; Thomas F. Woodlock; Richard V. Taylor and Ezra Brainerd, Jr.

Q. What is the indebtedness of Indiana?

A. The bonded debt of Indiana on October 1, 1925, was $340,000, and the floating debt $2,000,000, making a total of $2,340,000.

❦ ❦ ❦

Q. Can a Spanish-American War veteran receive back pension from the time the pension was begun if he did not apply at the beginning for same?

A. The law states as follows: 'Such pensions shall commence from the date of filing application therefor in the Bureau of Pensions after the approval of this Act in such form as may be prescribed by the Secretary of the Interior.'

❦ ❦ ❦

Q. I should like to get some information regarding the Lost Battalion in the World War, how they were trapped and saved.

A. Approximately 550 men under command of Major Charles W. Whittlesey were cut off from the remainder of the 77th Division and surrounded by a superior number of the enemy near Charlevaus in the Foret d'Argonne from the morning of October 3, 1918, to the night of October 7, 1918. Without food for more than 100 hours, harassed continuously by machine gun, rifle, trench mortar and grenade fire, Major Whittlesey's command with undaunted spirit and magnificent courage successfully met and repulsed daily violent attacks by the enemy. They held the position which had been reached by supreme efforts under orders received for an advance until communication was reëstablished with friendly troops. On the fourth day a written proposition to surrender received from the Germans was treated with the contempt which it deserved. When relief finally came, approximately 194 officers and men were able to walk out of the position. Officers and men killed numbered 107. The officers and men during these five days of isolation continually gave unquestionable proof of extraordinary heroism and demonstrated the high standard and ideals of the United States Army.

❦ ❦

Q. Who are the members of the Federal Reserve Board?

A. Ex-officio members: A. W. Mellon, Secretary of the Treasury, and J. W. McIntosh, Controller of the Currency. Appointive members: Governor, D. R. Crissinger; Vice-governor, Edmund Platt; other members, Adolph C. Miller, Charles S. Hamlin, George R. James, and Edward H. Cunningham.

❦ ❦ ❦

Q. What are the ten largest cities of Michigan and what is the population of each?

A. The ten largest cities in Michigan with their estimated populations are: Detroit, 1,290,000; Grand Rapids, 156,000; Hamtramck, 87,800; Highland Park, 77,000; Saginaw, 73,300; Lansing, 73,200; Jackson, 59,700; Kalamazoo, 54,500; Pontiac, 49,800; Flint, 137,000.

I READ IN THE PAPERS

To initiate and popularize revolutionary names in Russia it has been decided to keep files of events so that when children are born the parents will give them revolutionary names, that is, a name corresponding to some revolutionary event and to the terms used in revolutionary language.

New Names for Children in Russia

Up to three years of age parents may change their children's Christian names to revolutionary ones. The most popular names being given are the following: Energy, Steel, May (masculine), Maya (feminine), Boudimir (arouse the world), Rem (combination of the first letters of the words revolution, electrification, and peace, *mir*), Komintern (commissar of foreign affairs), Marat, Volodar (in honor of Volodarsky, the commissar), Electron, Marten, Interna (feminine for international), Marceliese, Forge, Blacksmith, et cetera. Many Fordson tractors having been brought into Russia, there were numerous cases recently of the name of Fordson being given to new-born children.

The powers have thrown a bull to the China shop.—Philadelphia *Public Ledger*.

ɛ ɛ ɛ

Two-Gun Tom may pursue the villain to the stolen mine and rescue the beautiful heroine in the nick of time; Leering Lopez the villain rides into the desert hills of Chihuahua where amid sagebrush and cactus he commits the worst of crimes; the film king of the sheiks may linger at the climax of his act, but the inhabitants of Brookline, Massachusetts, know nothing of it unless they visit the movie theater in some neighboring city. For Brookline, with its population of 47,000, has just completed its fifth year without a motion picture theater. The ruling element in Brookline have agreed that movies are all right in their place, but that place is not Brookline. The reason? Teachers, parents and clergy have agreed that school children do better without movies. There is no objection to the films themselves but the run interferes with the studies of the youngsters, disrupting the daily routine which includes sleep, home lessons and exercise in the open.

Brookline—a City Without a Single Movie

At a bankers' dinner the other evening a banker read a bad poem that he wrote, and nothing was done about it. But just let a poet write a bad check!—New York *American*.

ɛ ɛ ɛ

The chief trouble with dirt on the Anglo-Saxon stage (or perhaps, since we have New York in mind, the term is ill chosen; shall we say the English-speaking stage?) is that it is generally dull. For one brief and bawdy period when Charles II sat on the throne the English drama was gay and depraved, witty and nasty, delicious and disgusting. But that was before the days of realism, and perhaps it was easier. One forgives much in a man who can write dialog like Congreve's. But when the dramatist feels compelled to make all his characters talk the way—well, the way all his characters talk, it becomes in time almost as tedious and disgusting listening to them on the stage as it would be listening to them in the brothels, night clubs, nigger dives, and other charming places where they reside. At any rate, the new year on Broadway seems to give promise of a swing back of the pendulum toward a moderate degree of decency, the public having evidently discovered that smut is a dull dish for a steady diet. As soon, of course, as they really make this plain enough for the managers to comprehend, those sheep-like creatures will begin a stampede in the other direction, and probably Al Woods will revive *Everyman* and William A. Brady will trot out *Little Women*.

The Pendulum Swings Back on Broadway

The money that makes money is the money that makes work.—Boston *Transcript*.

ɛ ɛ ɛ

When Admiral Charles F. Hughes succeeded Admiral Samuel S. Robinson as Commander-in-Chief of the United States Navy, the officers of Admiral Robinson's flagship, as a special mark of honor, rowed him ashore in a whaleboat. This custom, called 'rowing the captain ashore,' is an ancient British one which has descended to the United States Navy. No official order is given but the officers of the ship do it to show the rest of the navy and the world how much they think of their 'old man.' The custom is said to have originated in Anglo-Saxon days when the royal barge of King Edgar (959-975) was rowed by eight vassal native kings.

ɛ ɛ ɛ

Newstead Abbey, the home of Lord Byron, is to be made into an apartment house. This ancient structure was once a monastery, founded by Henry II, who was seeking expiation for the murder of Thomas á Becket, and inhabited by friars of the St. Augustine order. It was taken from the friars by Henry VIII in 1539 and in the next year given to Sir John Byron, steward of Manchester and Rochdale and lieutenant of Sherwood Forest.

Byron's Home Made Into Apartments

The Byron family was awarded a baronial title and Newstead was stored in treasures and kept in glory until the time of the fifth Lord Byron, the poet's great-uncle, known as the wicked Lord Byron. In 1765 this unlucky nobleman lost public favor through slaying a neighbor in a duel and Newstead started on a downhill path. The estate came into the possession of the poet in 1798 and was in such a state of decay that he and his mother were forced to take residence in Nottingham. The poet, who was the sixth Lord Byron, used it as a place of residence only during 1808 and 1809, and sold it to Colonel Wildman, a schoolfellow of Byron's, in 1818. Colonel Wildman restored the abbey to much of its former grandeur, preserving in it many Byron relics.

ɛ ɛ ɛ

This is a man's world. A woman pays $20 for a permanent wave, while a man gets a permanent bald spot for nothing.—Detroit *Times*.

ɛ ɛ ɛ

Twenty-nine years ago the Duke of Loubat gave to Columbia University in New York City a block of land then estimated to be worth $1,100,000. At the time, the duke was sixty-seven years old, and the sole stipulation he made was that he should receive an annuity of $60,000 for the remainder of his life. The gift was regarded at the time as highly generous. Circumstances in the intervening three decades, however, have given it a peculiar twist.

A Gift That Paid Dividends

The university arranged with an insurance company, at the time of accepting the gift, to handle payment of the annuity. For this purpose the university paid the insurance company $700,000. That this was an advantageous move was proved by later events. The property donated by the duke was in a section of the city in which realty values have gradually declined in the past thirty years. The income from it has, in fact, barely paid the taxes and expenses of upkeep. On the other hand the Duke of Loubat, instead of passing on at the allotted 'threescore years and ten,' lived to be 96 years old; and when he died recently, he had received a total of $1,740,000 in annuities from the insurance company. The university will about break even from the gift; but the insurance company paid heavily for its bargain.

The number of college men in Sing Sing is increasing rapidly. Warden Lawes is reported looking for a good football coach.—New York *Sun*.

ɛ ɛ ɛ

A new version of General Phil Sheridan's famous ride from Winchester is given by F. A. Brown in the *Pathfinder*. The generally accepted story is that the general, finding the Union cavalry in disorder after his mad dash to the scene of battle, called to his troops: 'Turn, boys, turn. We're going back.' This quotation is challenged by Mr. Brown. He says:

Sheridan's Ride —a New Version

'I was standing on the National Pike and near enough to touch Sheridan's horse, when Sheridan and General Wright met, and those were not Sheridan's words. I heard the first word spoken by both. Sheridan saluted Wright and said, "What's the position, general?" Wright replied, "I have the army in a safe position to retreat."

'"Retreat, hell! We will not retreat," Sheridan said. "Yes, we will," replied Wright. "The 8th Corps is cut to pieces, the 19th Corps is demoralized."

'Sheridan said, "No," and then took off his cap and shouted, "Come on, boys, we will occupy our old camp tonight!"

'We did.'

BRIEFLY TOLD

A RULING HAS BEEN MADE by the French Government providing for the elimination of every candidate for a scholarship whose examination paper has five mistakes in spelling.

THE LOBO, OR LARGE GRAY wolf, is rapidly vanishing in the stock-raising regions of the West. During the last year only eight were taken in New Mexico, eighteen in Arizona, twenty-eight in Montana, one in Oregon, six in South Dakota, eight in Utah, twelve in Wyoming and none in Colorado.

A GROUP OF FARMERS NEAR Rosthern, Saskatchewan, are planning to introduce camels into Canada for agricultural work.

THE HIGHEST COURT OF France, the Court of Cassation, has ruled that pedestrians are subject to traffic rules as are vehicles and may be fined if they disobey the rules.

SIX HUNDRED THOUSAND DOLLARS in gold coin was shipped recently from the United States to the Straits Settlements to serve as wedding presents among the natives, who have little regard for their value but treasure them as trinkets, associating the Liberty head with pictures of Queen Wilhelmina of Holland.

WHENEVER A DEATH occurs in the village of Cesaree, Turkey, a public crier shouts the news through the streets. Even though the death occur in the depth of night the crier immediately shouts out the doleful tidings, awakening the village with his loud cries.

A CLEVELAND MAN HAS invented a device that controls traffic signals by sound and by the mere shriek of the fire engine's siren will change signals and halt all vehicles.

THE EXCESSIVE RAINS OF October kept the wool of a flock of sheep near Sedalia, Ohio, wet. When they rubbed against a haystack, timothy seed fell on their backs, were germinated and sprouted, making 'green' sheep.

THE LATEST STATISTICS from France show that in 1920 there were 90,129 bachelors paying the tax on celibates, in 1921 the number rose to 208,449, in 1924 to 238,544, and in 1926 to 260,000.

THE ANT WAS ONE TIME used by surgeons to bind the edges of a wound. When brought into contact with the wound the pugnacious creature closed its jaws, biting through the skin and joining the two edges.

IT REQUIRES SEVEN YEARS for an orchid to reach its maximum size and begin to bear the highly prized mauve and lavender blossoms.

THE POPPY BECAME THE SYMBOL of death when Tarquinius Superbus answered the question as to what was to be done with the people of a conquered city by slashing the heads off the largest poppies as a command to slaughter the most influential citizens.

A RAILROAD WILL BE built in Albania by the men of Albania below the age of fifty years. They will work six days in the year for the state. Albania is the only nation in Europe without a railroad.

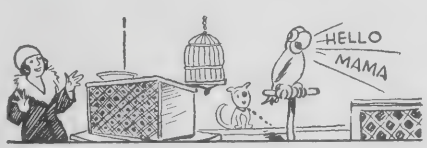
DURING THE PAST YEAR 280,000 persons paid a penny admission fee to see the 158-year-old grapevine at Hampton Court, England. It has produced as many as 2,200 bunches of grapes in a year but the crop is now kept down to about 500 bunches.

THERE IS A CUSTOM IN Santo Domingo of wearing *promisa* costumes, often of vivid patchwork, to remind the wearer that he has made a vow that must be kept. The duration of the *promisa* varies from three months to a year and may involve the wearing of sackcloth.

THE OLD MAHOGANY CLOCK owned by George Washington's mother has been located by the Daughters of 1812 and will be purchased and placed by them in Kenmore, the Washington family home in Fredericksburg.

THE CONTENTION OF A GERMAN scientist that earthworms sing is confirmed through observations by Dr. Rudolph Ruedemann of the New York State Museum. Whether, as Dr. Ruedemann believes, the worms produce the sound by dragging the fine bristles under their bodies over a hard object at the edge of their burrows, or whether they do the singing with their mouths, is not yet known.

THE MOTHER OF WILLIAM McKINLEY is the only mother of a President of the United States who lived to see her son inaugurated.



A WOMAN IN SCRANTON, Pennsylvania, discovering her pet parrot stolen, immediately made the rounds of the city's bird stores. In one store she heard, 'Hello, Mama!' from a parrot. Recognizing her bird, she had the thief traced and arrested.

ABRAHAM LINCOLN IS SAID to have spent seventy-five cents in his campaign for Congress.

YELLOWSTONE PARK HAS A total area of 3,348 square miles, allowing each American citizen ownership in the park of a section thirty feet square.

A LAMP WHICH BURNS day and night in a corridor of Scotland Yard is the 'Yard's' memorial to its civil servants who fell in the war.

A PINTAIL DUCK KILLED recently in Brawley, California, bore on its leg an aluminum band placed there twelve years ago by a United States game warden.

THE PREFERENCES OF THE different members of the Chamber of Deputies in Paris are so varied that placing the speaker's 'glass of water' on the rostrum is a complicated job. Premier Poincaré takes water, others prefer lemonade, orangeade, hot or cold coffee, black or with milk, white or red wine, water with mint in it and sage tea.

J. H. JOHNSON, OF Aberdeen, Washington, hoping to become the champion gum-chewer, put fifty-five sticks of chewing gum in his mouth at one time.

THERE ARE BETWEEN FIFTY and seventy-five thousand deaf children in the United States.

BY TESTS ON 158 pairs of twins in New York City it was found that twins are about twice as much alike mentally as are brothers and sisters of different ages.

FIFTY MEN AND WOMEN students at the Homeopathic Medical College of New York have volunteered to be stung by bees and bitten by spiders in an attempt to determine whether the venom can be put to some useful purpose.

A GROUND HOG AT THE Philadelphia Zoo broke all marathon slumbering records by sleeping from October 5, 1926, to March 5, 1927, a total of 151 days.

THE LADIES' AID SOCIETY of Windsor, Colorado, used a novel scheme to raise money. Every woman attending the social was charged a penny an inch for every inch of her waist measure. Forty-eight dollars was collected.

A BOOK IN THE New York Public Library travels an average of two city blocks from the 'stack' to the reading desk. On a moderately busy day some 2,500 books make the trip, making the book-traveling done amount to some 5,000 city blocks, or 250 miles.

ST. PAUL'S CATHEDRAL IN London has returned to the United States as a relic a lightning rod installed by Benjamin Franklin.

NOTES - COMMENTS - CRITICISMS

MR. FORD'S Page this week discusses the necessity of maintaining the balance between big and little things.

ɛ ɛ ɛ

'Judas' is a characteristic poem by Gamaliel Bradford on page 2 of cover.

ɛ ɛ ɛ

The cover design is by Van der Heyden. It is an attractive study of a flock of chicks, an appropriate symbol that Easter, the beginning of a new life, is at hand.

ɛ ɛ ɛ

'Abide With Me' is a hymn that is sung by the whole of Christendom. It was written by an obscure English clergyman who died not so very long ago. W. Teignmouth Shore gives us the history of this gem of church music. (p. 2)

ɛ ɛ ɛ

Some aspects of the immigration tangle are set forth by Marian Bruce Clark. What will strike the reader is that some of the projected remedies may not prove real remedies. This matter is still in the experimental stage. (p. 3)

ɛ ɛ ɛ

Songs are remembered and sung long after their composers are dead and forgotten; but they are good songs. Of all the thousands that have been written only a few endure. Here is an account of a man who composed a song that sold by the million. Will it stay? (p. 4)

ɛ ɛ ɛ

What of the Democratic outlook? Will the nomination be worth fighting for? One of the leaders of the party, 'a veteran of national fame,' gave the answer to a member of the press gallery at Washington. (p. 5)

ɛ ɛ ɛ

Probably some of the impressions of Mexico one reads are based on preconceived ideas. W. L. Stidger gives us a fresh and impartial outlook in various directions in that country. (p. 6)

ɛ ɛ ɛ

H. G. Salsinger gives us another of his analytic monographs on sport. It shows how people learn how to play the game by simply watching it. Thus the crowd has its part in the play, notwithstanding opinion to the contrary. (p. 7)

ɛ ɛ ɛ

Some books stir one up; others are decidedly soporific; but after the day's darg is done it is the book that soothes that we want. Try John Woolman's writings. Others besides Charles Lamb have commended them. (p. 8)

ɛ ɛ ɛ

People generally grab a newspaper when they want to know what the peace or war prospects are in the world. Perhaps not one in ten thousand thinks of consulting the Bible, and yet the Bible says more on the subject than any newspaper dispatch or telegram ever written. W. G. MacKendrick comes to some vivid conclusions after intensive study of the subject. (p. 12)

ɛ ɛ ɛ

Julian Hawthorne is at his best in narrating 'how we played in the old times.' Outdoor sports and recreations had the same elements in them as they now have, but nowadays maiden ladies do not have to use telescopes to visualize natatorial college students, as the writer relates. (p. 14)

ɛ ɛ ɛ

'The Adventure of the Beautiful Things' will be found to embody much of the delightful satire of Hugh Walpole's writings. (p. 16)

ɛ ɛ ɛ

We think of the African blacks as savages who are always thinking black, but they have an ethical code of their own. It does not conform to ours in all things, but in the training of their youth there are some things that are akin, Henri Galland tell us. (p. 24)

ɛ ɛ ɛ

'The Holy City' is a poem by Anna Hempstead Branch. (p. 25)

ɛ ɛ ɛ

The Old Testament tells us of a golden statue ninety feet high and nine feet wide. Nebuchadnezzar, King of Babylon, wrote a unique letter about it, as William A. McGarry relates. (p. 26)

More opinions from our readers, some favorable, others not so:

Robinson, Kansas.

You may cancel my subscription to THE DEARBORN INDEPENDENT on receipt of this notice.

Your paper contains much that I value very highly, and is worth much more than the price of the paper.

The dance program, published by you, has been one of the leading factors in the ruining of a number of our girls, disgracing them forever.

Please accept this as my protest against building fortunes by destroying moral standards.

W. C. GREEN.

Lebanon, Pennsylvania.

I allowed my subscription to lapse on account of too many subscriptions. I believe in conservation of natural resources. I get three drug journals and five newspapers but I know I would be missing valuable information if I was not to renew my subscription. You are one in a million, fearless in the right and not afraid to express your convictions. The country needs more men with the true patriotic spirit you possess.

S. H. MCGOWAN.

Worcester, Massachusetts.

I approve in many respects the opinions you express. On the whole I think you deserve being sustained.

Your views on prohibition I do not approve, as I am not now a prohibitionist, though I formerly was. Neither do I agree with one of your writers, Rev. Dr. Barton in his constant attempts to deny or explain away various good actions attributed to Abraham Lincoln.

However, I am utterly opposed to the course of those who try to discredit your efforts for good in so many directions.

CHARLES R. JOHNSON.

GAMALIEL BRADFORD was born in Boston, and his home is at Wellesley Hills, Massachussets. He is the author of various books and essays and his poems include 'Shadow Verses,' and 'A Prophet of Joy.'

W. TEIGNMOUTH SHORE resides in London, England. He is an occasional contributor to the New York newspapers, and he is also a special writer for the principal London dailies.

W. L. STIDGER is well known to our readers. He has traveled extensively and kept records both with pen and camera.

NORMAN BEASLEY is a contributor to leading magazines and newspapers and a writer whose range covers a large variety of subjects.

H. G. SALSINGER as a sports editor and contributor to sports literature is well known to most followers of outdoor recreations in this country.

W. G. MacKENDRICK'S home is in Toronto, Ontario. He is widely read in the history of the Hebrew race and has contributed extensively to various publications on the identification of the Anglo-Saxons with the Israelites.

JULIAN HAWTHORNE, son of the great novelist, has added another to the delightful series of reminiscent articles with which he has entertained our readers.

HENRI GALLAND is in the employment of the French Government. He is the administrator of French Equatorial Africa.

ANNA HEMPSTEAD BRANCH has contributed verse and prose to the leading magazines. She is the author of 'The Heart of the Road,' 'Rose of the Wind,' 'Nimrod' and other poems.

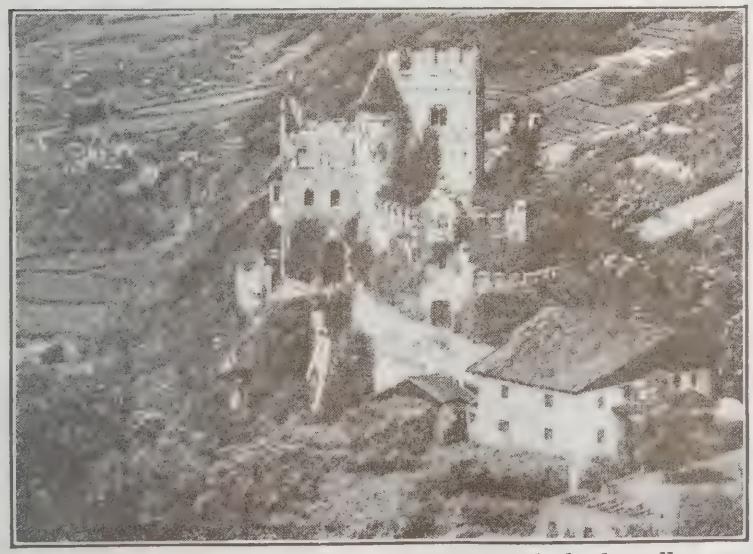
WILLIAM A. McGARRY is a journalist and magazine writer who possesses the faculty of unearthing interesting subjects

CASTLES *in* Spain—*and* Elsewhere

Castles hark back to stirring times, times of chivalry, romance, and robbery on a poetic scale. Here stands centuries-old evidence of the reign of feudal lord and robber knight, secure in their thick-walled, impregnable fastnesses. Above are interesting ruins of the Crussol, a 12th-century castle of France, across the Rhone from Valence. This afforded an ideal outlook over the surrounding country and excellent protection against sudden attack. —*National Feature Photo.*

One of the most interesting structures in the Danish kingdom, Spoettrup Castle, in Jutland, built about a century before Columbus discovered America, is in an excellent state of preservation. Like early European castles, it was a self-contained fortress, with thick walls and small, infrequent windows. —*Herbert Photo*

Center—
Alcazar, Arab word for castle, is used for important Moorish ruins. They generally combine the Moorish and the Gothic. This is the Alcazar at Toledo, Spain, and bridge across the Tagus. It stands on the highest ground in Toledo, originally the site of a Roman fort, and was built as a citadel by King Wamba and used as such by the Moors. St. Ferdinand converted it into a palace.
—*E. M. Newman Photo.*



Castle Fontana, ancient citadel of Meran, overlooks the valley over which it once held sway, for Meran was once the capital of Austrian Tyrol. This castle was built in the 16th Century.
—*Herbert Photo.*

Picturesque Castle Eltz, in the hills along the Mosel River, in Germany, dates back to feudal times. Rising from the trees like a vision, it typifies knight errantry at its best.
—*Ewing Galloway Photo.*

UNIV OF ILLINOIS
URBANA ILL

'All of good the past hath had
Remains to make our own time glad.'

IF A thing is old, it is a sign that it was fit to live. Old families, old customs, old styles survive because they are fit to survive. The guarantor of continuity is quality. Submerge the good in a flood of the New, and the good will come back to join the good which the New brings with it. Old-fashioned hospitality, old-fashioned politeness, old-fashioned honor in business, had qualities of survival. These will come back.

UNIVERSITY OF ILLINOIS-URBANA
